Ad hunc Libri Prognostici amicti Calcheta : 20.
R. eliofres Lactorem carmen Prognosticon.

Stelliferi secreta Poli non parua voluisti,
et manifesta facis parvulus iste liber.
Vana superstitio nulla hic, ars impia nulla,
ignotum rabido Zoilus ore crepat.
Quod deus falsum Celumq, Solumq, fulgurq,
quod indus fuerint Sidera, terra, mare :
Prima Deo causa est, causa sunt Astra secunda,
nil, si prima vides, causa precor alter.

Ad amicum suum Calcheta : 20.
Libri Prognostici.
Abdita stelliferi referant mysteria Cali,
quid signent nobis astra cernosa Poli :
Quid pluvias, ventos, tempestatesque senoras,
exerit, his polus unde ferena dies :
Nec pietate, doces, namque vultum istis,
Causam Causarum te facis esse Deum.

R.W.

A necessary and perfect rule for ever to know
the 4 Termes begin and end: and how many
Returns are in every Terme.

Eight dayes before a Terme shall be,
The Exchequer openeth certainly
Except the Terme of Trinity,
Which openeth but 4 dayes before a Termally.

1 Hilary Terme beginneth the 21 day of January
be not Sunday) but then the next day after, and endeth the
12 of February, and hath 4 Returns.

Ostabis Hillarii	Crastino Purificationis
Quind. Hillarii	Ostabis Purificationis.

2 Easter Terme beginneth 17 dayes after Easter, and en-
deth 4 dayes after Ascension day, and hath 5 Returns.

Quind. Pasche	Mense	Quind. Pasche.
Tres Pasche	Pasche	Crastino Ascensionis.

3 Trinity Terme beginneth the next day after Corpus Christi day, and endeth the Wednesday fortnight af-
ter, and hath four Returns. Note that Corpus Christi day
is always the Thursday after Trinity Sunday.

Crastino Trinitatis	Quind. Trinitatis
Ostabis Trinitatis	Tres Trinitatis

4 Michaelmas Terme beginneth the 9 of October (if it
be not Sunday) and endeth the 28 day of November, and
hath 8 Returns.

Ostabis Michael	Crastino Michael
Quind. Michael	Crastino Martini
Tres Michael	Ostabis Martini
Mense Michael	Quind. Martini

In this my Calender following, you shall finde, both
the beginnings and endings of the Termes, and all the
Returns set downe upon the dayes of the month that they
fall upon this yeare, 1631.

A most plain and true Table shewing the true
time of the beginning, continuance, and years, since

the reigns of each King & Queen in this Land, from the
Conquest, until the present time, as is set forth in the
Chronicles, and is now set forth in this Table.

The Kings names.	When they reigned.	The time they reigned.	When they died.
Will. Conq.	1066	1066	1066
Will. Rufus	1087	1087	1087
Henry the first	1100	1100	1100
King Stephen	1135	1135	1135
Matilda the 1 st	1141	1141	1141
Richard the 1 st	1189	1189	1189
King John	1199	1199	1199
Henricus 3 rd	1216	1216	1216
Edward the 1 st	1272	1272	1272
Edward the 2 nd	1312	1312	1312
Edward the 3 rd	1327	1327	1327
Richard the 2 nd	1377	1377	1377
Henry the 4 th	1399	1399	1399
Henry the 5 th	1412	1412	1412
Henry the 6 th	1422	1422	1422
Edward the 4 th	1461	1461	1461
Edward the 5 th	1483	1483	1483
Richard the 3 rd	1483	1483	1483
Henry the 7 th	1485	1485	1485
Henry the 8 th	1509	1509	1509
Edward the 6 th	1547	1547	1547
Queen Marie	1553	1553	1553
Elizabeth	1558	1558	1558
King James	1603	1603	1603
King Charles	1625	1625	1625

The parts of mans body, which the Planets do signifie of themselves.

Saturnus	Iupiter.	Mars	Sol.
Spleene, Right Ear, Bladder, and Bones.	Lungs, Ribs, Liver, Gri- tles, Urine, Arteries.	Soll, reins, Left ear, Holmes, and Stones.	Sight, Heart, right eye, mar- row, sinewes, right eye viri, and left eye
Venus	Mercurius.	Luna.	mulieris.
Neck, Spirit, Fatnes, but- tocks, geni- tals, matrix, pappes, and thyroide.	Memory, Tongue, Hands, phantasie, Mouth, Stitches, and shanks.	Left eye viri, right mulieris, Stomach, Left side, breast, Womb, port, and Caste.	Mars & Venus. The secrets of both sexes.

These eleven Signes are thus char- actered.	Aries. Taurus. Gemini. Cancer. Leo. Virgo.	Libra. Scorpio. Sagitt. Capric. Aquar. Piss.
	♈ ♉ ♊ ♋ ♌ ♍	♎ ♏ ♐ ♑ ♒ ♓

The Planets thus, with the dragons head and taile.	Saturne.	Iupiter.	Mars.	Sol.	Venus.
	♄	♃	♂	☉	♀
	Mercury.	Luna.	Caput drac.	Cauda drac.	
	☿	☾	♁	♂	

The Signs thus.	Coniunct.	Sextile.	Quadr.	Trinus.	Opposition
	☿	♈	♊	♌	♍

Die lijn de teckenent der Planeten,
Luna, middelbaer goet. ♄ Mercurius, middelbaer, ♀ Ve-
nus goet. ☉ Sol, middelbaer. ♂ Mars goet. ♃ Iupiter, goet
♄ Saturnus, goet. Ende die oppositie ende quadrature
lijn quaet: de coniuactie, Trinus ende sextil lijn goet.

Times of Marriage prohibited by the Church.			
From	After Advent fast.	After Septuages.	After Trinitie Sunday.
	After Lent fast.	After Ascension day.	After Pentecost Sunday.
	After Whitsunday.	After Trinity Sunday.	After Corpus Christi Sunday.

A true definition of naturall Astrologie by the Author.

*Astrologia vera et erudita physica pars est, interem
proprietates, vires, effectus ac significaciones Naturae, quas
in elementis, natura & microcosmo existant, non quidem
curiosus & superstitiosus, sed verarum observationum & ratio-
nalis experientiae testimoniis, idq; per certas hypothesis ar-
tis quoque principia & Phaenomena. Horum principiorum naturae
& demonstratione generatim de oculis pona doctrina Sphae-
rica. Est enim coelum vehiculum divinae virtutis, quae, me-
diante motu & lumine stellarum tamquam causis secundis
Deum omnia haec inferiora gubernat & disponit. Non ta-
men necessarius absolute, sed conditionaliter, & instrumentis
fartiter.*

In the 7. or last column of this my Almanacke toward the right
hand, you have the houre and minute of the Sunne rising
for every day in the yeare at London: which houres and minutes
are halfe the length of the daye night. For example: the 5. of Ja-
nuary, the Sunne riseth at London, at 8 of the olocke, and 10 min.
after that length being doubled, makes 16 houres and no minutes,
the length of the daye. And so know the date of the Sun rising in the
same place through the yeare, take the houres and min. found in the
Almanacke for that rising from 12. and you shall have the Sun
setting left, which being doubled, is the length of the day. Ex-
ample: January the 5. day aforesaid, the Sunne riseth at 8. and
10 min. take 8. from 12. and there lefteth 4. houres of Sun rise
that day, the houre of 4. being doubled makes 8. houres, the length
of that day, and so of all the rest. This is very easie.

February hath xxviii. dayes.

- Full Moone the 5 day, 57 min. past 4 after noone.
- Last quart. the 12 day, 44 min. past 8 in the morn.
- New Moone the 20 day, at 11 of the clock 22 m. at night.

June the Moone hath 29 .dayes.

Phœbus high mounting in our Hamisphere,
Thence darts his beames, which fri's our bodies here,
Bid Venus packe, for if thy minde be bent,
To lustfull sports, thou'lt dye incontinent.

Iuly the Moone hath 30. dayes.

Cold bathes: and cooling herbes are much cōmended
Till Dog dayes furious heate be fully ended:
Honest householders toile in making hay,
But Foxes toiles, are alwaies for a pray.

August the Moone hath 30. dayes.

Now former sweats reape present sweets of gaine,
 For now good husbands do imbarne their graine,
 If painfull Ants 'gainst winter make prouision,
 Should fluggards liue by others exhortation?

September the Moone hath 29 .dayes.

W maist thou gather fruits, when time is sitting,
W maist thou eate ripe Pearce-maine, & ripe Pippins
te-bearing trees deserue to be manar'd,
und-cumbring barren, must not be endur'd.

October the Moone hath 30. dayes.

Now quench your flagrant thirst with fragrant wine
 both when you sup, and likewise when you dine:
 ingurgitate not too much, but keepe a meane,
 for many draughts, will make a fat man leane.

s.

Nouember the Moone hath 29. dayes.

th clothes keepe body warme, as hives do Bees,
 warme it not too much, with Tinkers frieze;
 which often makes ill Liners, breeds Catarrhs,
 and kindleth Sodaine flames of furious Iarrs.

December the Moone hath 30. dayes.

fraud not now thy Genius, feast and play,
 quiet, sans surfeitting each holy day :
 now winters cold, consuming store of Fewell,
 thy bodies heat doth challenge to a Duell,

A Tide Table, whereby is easily found the time of full Sea, at
cheefest Ports, in and adioyning to this Kingdome.

For these places adde houres and minutes.

Bristol, S. Mat. Font. Ostend, Blackenh.
Frith, Aitch, Dunbar, Month, Egmo, Pat. Shilly.
Salmo, Garnsey, Abatto. S. Palo, Embay, Ayard.
For, Waterford, Poghall, Corke, Kinsale.
Lin, Dunbar, Weymouth, Daren. Line, Hale.
Montbray, Antwerp, Hanboz, Bristol, Lamion, Fulnes.
Milford, Bridgwa. Exwater, North-coast of Engl.
Portla. Peterport, Harlew, Hag, Blanchey.
Orney, Poole, S. Ellens at the sea, Emaden.
Deepe, Medles, Casket, Lux, Lenoy..
Gallen, Douer, Harwi. Parmouth, Aest. wight.
Dorfbnes Northland.
Callise, Callha. t, Kye, winchesley, Gore-cue
Land-end, Southampton, Dumborow, Portsmouth.
Willins, Flanders, Spits, the Sluce, along the Swine.
But contrariwise. for these substraet Houland Min.
Redban. Aberdin, the west end of the More.
Granel-end, Downes, Cenes, Kunnep, Rankins.
Dundee, S. And: ewes, Lisbon, S. Lucas.
Cinno, Harlepo. Cadiz, Gascoigne, Pittaine.
Bickyp, Galtia, Portgall.

The vse of this Table is easily had, by adding or
stracking the houres and minuts from the time of the
sea at London bridge, noted in the diarie of my Al
macke, in so doing it sheweth you the time of full-sea
all these places above noted : with this Caution,
Winds, Land-floods, the Moones Latitude, may be
hinderance, or fortherance of the time, an houre more
lesse.

Allestree. 1631.

An Appendixe vnto the
Precedent Almanacke, for
this present Teare of Grace.
M.DC.XXXI.

Wherein you may Obserue a
briebe Chronology of Yeares: A De-
claration of all the Ecclices of the
two great Luminaries, which are to bee
scene this Yeare; (if the Ayre be cleare.)

Astronomickall Calculation: of some Phy-
sicall notes, and notes of Husbandry
and Gardning; with a Cronography
of the foure Quarters of this
Yeare.

Vsefull and pleasant for all those
which are desirous (and holds
not ynlawfull) of such good
Worke.

By Richard Allestree.

GOD maketh Lightning both Eaine, and bringeth
forth the Cloud out of his Treasures. Ier. 50. 13
Thus Nature is an Order prescribed, and set downe
by GOD too.

LONDON:

Printed for the Company of Stationers 1631.

Lady Elizabeth. February 14.
- Since the Comet or blazing Star. from the 11.
November, anno 1618. till the 16 of Decem.
- Since the happy returne of King Charles from
Spaine. October 6.
- Since the last great Earth-quake in England.

Suphemismus, or *Boni ominis*
Capitatio. Also some Astronomical
Calculations for this pre-
sent Year. 1631.

A Declaration of all the Eccleses
within this present Year of
Grace. 1631.

There will be foure Eccleses of the two great Lu-
minaries, this year 1631, two of the Sunne and
two of the Moone, but the first of the Sunne only,
and the two of the Moone will be seen upon our Pon-
toun (if the Ayre be cleare) the latter of the Sunne not.
The first Eclipse of the Sunne is like to be seen of vs
in England the 21. day of April (but beyond the Sea, the
22. day of May.) two minutes before 9. a clocke in the
morning: both the Luminaries totourning in the 10. de-
grees and 2. min. of Taurus, not much before the Dragons
head. The digits Eclipsed are 3. and 6. parts. The du-
ration is one houre, 10. minutes, the upper side of the
Sun being darkned by the Opacous body of the Moone.

The first Eclipse of the Moone will be very copicu-
ous in England, Scotland, and Ireland, just at Sunn. set-
ting; for the Moone will rise Eclipsed: It will be a 1. and
1/2. of our light the 5. of May being Thursday, according to
our English account, (but upon the 15. day of the same
moneth, according to the Romane account.) This to-
tall Eclipse beginning 17. min. past 5. in the afternoon,
totally darkned 18. min. after 6. at night in the middle
of her darknesse at 7. min. after 7. a clocke. The begin-
ning of her recovery of her borrowed light, 1. min. before
8. and the end of her darknes at 3. min. before 9.

The second Eclipse of the Moone will also be a totall
Eclipse, which will be observed to our sight the 29. day

A Prognostication.

of October being Saturday, according to our English account; but the 1. of November according to the Roman. The Eclipse will begin to be intercepted by the Opacous body of the earth the day above-said, the beginning is at 45. minutes past 8. at night, the beginning of her total darknesse at 3. minutes before 10. a clock. The middle of her darknesse at 7. min. before eleven. She will end all her darknesse at 2. minutes after one clock in the morning.

Saturne moveth in his Retrograde motion from the 16. day of February, to the 6. of July, from thence unto the end of the yeare Direct.

Jupiter is direct from the beginning of the yeare to the 28. of July: Thence he beginneth to be Retrograde till the 13. of November, from thence to the yeares end Direct.

Mars moveth according to the succession of the Signs all the yeare, untill the 9. of December.

Venus is direct from the beginning of the yeare to the 8. day of November, from thence to the 18. of December Direct: then againe Retrograde.

Mercury is Retrograde from the 21. of February to the 16. of March. And from the 19. of June to the 12. of July: And from the 12. day of October to the 3. of November, and all else he is Direct.

Note, that one degree of Latitude in the Shyre, becometh under the Aequinoctiall to 60. miles on Earth. A degree in the Orbes of Heaven, is a rate of proportion, and doth signifie the 360. part of a Circle. They that dwell under the Aequinoctiall Line have their longest day in the yeare but 12. houres. A day naturall includeth in it the night also, and both together containeth 24. houres. An houre containeth 60. min.

The longest day with them at Ward-house, where the Pole is elevated 71. degrees, and our Admirers that go into Moscovia do touch in their Voyages: I say their longest day in the yeare is 73. of our dayes long together without any night betwene, which day containeth 1752. houres in length: which time of the yeare, is from the 6. of May, to the 18. of July: The length of the day with them that dwell under South-Pole, is in length halfe of our yeare together without any night betwene. The other halfe of their yeare, is all night together without any day betwene.

And

Allestree. 1631.

And in Greene-land the Sunne setteth not in 2400.
houres long, which is in length 95. Dimes and 20. mils.
Pea, here in England the sette same day differeth in
length, as appeareth at these places following.

At	{	London	the longest	{	16. hou. and 26. minut.
		Norby	day in the		16. hou. and 44. minut.
		Yorke	yeare is		16. hou. and 58. minut.

Thus you may see there is 32. minutes of an houre
betweene the longest day in the yeare at London & York.

A Cronography of the foure Quarters of this Yeare. 1631.

1. The Hyemall Solsticiall, or Winter Quarter, be-
ginmeth Astronomically; the last yeare 1630. Decem-
ber the 11. Day. 5. houre, 35. min. 00. sec. at what time
the Sunne entereth into the first min. of the imaginary
signe of cold and earthy Capricorne, being then Declin-
ed from the Aequinodciall, according to the observati-
on of Tycho de Brache, 23. Degrees, 31. min. 30. seconds
to the Southwards: at which time the dayes be at the
shortest, and nightes at the longest with vs.

2. Aequinodiam Verum: or our Spring Quar-
ter, beginmeth naturally with vs Astronomically, the
10. day of March this yeare. 56. minutes after 5. after-
noone: at what time the neuer resting Sun entereth in-
to the Aequinodciall signe Aries, making the day equall
with the night, to all the World.

3. Solsticium Aestivum: or our Summer quarter with
vs according to Astronomy, beginmeth the 11. day of
Iune, 9. houre, 56. min. afternoone: at which time the
Sun entereth into the first min. of the imaginary cold, &
moyst signe Cancer, then making his greatest Northern
declination, making then our longest day and shortest
night in all the yeare.

4. Autumnall Aequinodciall, our Autumn. or Har-
vest Quarter, beginmeth according to Astronomy the 13
day of September, 32. min. 45. sec. afternoone, at which
time the Sun entereth the first scruple of the imaginary
hot, moyst, and dry signe Libra, which maketh againe
our nightes and dayes equall, or alike.

A Prognostication.

of October being Saturday, according to our Almanack; but the 3. of November according to the sun. The Boone will beginne to be intercepted by Opacous body of the earth the day afore-sayd, the beginning is at 45. minutes past 8. at night, the beginning of her totall darknesse at 3. minutes before 10. a clocke. The middest of her darknesse at 7. min before cleare. She will end all her darknesse at 2. minutes after one clocke in the morning.

Saturne mooveth in his Retrograde motion from the 16. day of February, to the 6. of July, from thence unto the end of the yeare direct.

Jupiter is direct from the beginning of the yeare till the 18. of July: After he beginneth to be Retrograde till the 13. of November, from thence to the yeares end direct.

Mars mooveth according to the succession of the signes all the yeare, untill the 9. of December.

Venus is direct from the beginning of the yeare till the 8. day of November, from thence to the 18. of December direct: then againe Retrograde.

Mercury is Retrograde from the 21. of February till the 16. of March. And from the 19. of June to the 12. of July: And from the 12. day of October to the 3. of November, and all else he is direct.

Note, that our degree of Latitude in the Sky, both asunder under the Equinoctiall to 60. miles on Earth. A degree in the Dikes of Heavens, is a rate of proportion, and both signifie the 360. part of a Circle. They that dwell under the Equinoctiall Line have their longest day in the yeare but 12. houres. A day naturall includeth in it the night also, and both together containe 24. houres. An houre containeth 60. min.

The longest day which I can at Ward-house, where the Pole is elevated 71. degrees, and our Clergy men that go into Moscovia do touch in their Voyages: I say their longest day in the yeare is 73. of our dayes long together without any night betwene, which day containeth 1752. houres in length: which time of the yeare is from the 6. of May, till the 18. of July. The length of the day with them that dwell under North-Pole, is in longer halfe of our yeare together without any night betwene. The other halfe of their yeare, is all night together without any day betwene.

And

Allestree. 1631.

And in Greene-land the Sunne setteth not in 2400. hours long, which is in length 95. Dayes and 20. min. Sea, here in England the selfe same Day differeth in length, as appeareth at these places following.

At	{	London	}	the longest	{	16. hou. and 26. minit.
		Derby		day in the		16. hou. and 44. minit.
		Yorke		year is		16. hou. and 58. minit.

Thus you may see there is 32. minutes of an houre betwene the longest day in the year at London & York.

A Cronography of the foure Quarters of this Year. 1631.

1. The Hyemall Solstitiall, or Winter Quarter, be-
ginmeth Astronomically; the last yeare 1630. Decem-
ber the 21. Day. 5. houre, 35. min. 00. sec. at what time
the Sunne entereth into the first min. of the imaginary
signe of cold and earthy Capricorne, being then Declin-
ation from the Aequinodciall, according to the observati-
on of Tycho de Brache, 23. Degrees, 31. min. 30. seconds
to the Southwards: at which time the dayes be at the
shortest, and nights at the longest with vs.

2. Aequinoctium Vernalis: Or our Spring Quar-
ter, beginmeth naturally with vs Astronomically, the
10. day of March this yeare. 56. minutes after 3. after-
noone: at what time the neuer resting Sun entereth in-
to the Aequinodciall signe Aries, making the Day equall
with the night, to all the World.

3. Solstitium Aestivum: or our Summer quarter with
vs according to Astronomy, beginmeth the 11. day of
June, 9. houre, 36. min. afternoone: at which time the
Sun entereth into the first min. of the imaginary cold, &
moist signe Cancer, then making his greatest Northern
declination, making then our longest day and shortest
night in all the yeare.

4. Autumnall Aequinodciall, our Autumn. or Wat-
ter Quarter, beginmeth according to Astronomy the 13
day of September, 32. min. 45. sec. afternoone, at which
time the Sun entereth the first sciple of the imaginary
hot, moist. and dry signe Libra, which maketh againe
our nights and dayes equall, or alike.

A Prognostication.

Some few *Physicall* Notes and Observations.

The World consisteth of ether of things multibie, as of Angels, and Spirits: as visible, as the Heavens, the Elements, and the bodies composed of the Elements. So then of the foure humours do errede or alter that proportion in mans body (that God created them at the beginning, either in quality, or quantity, then shortly after cometh diseases and sicknesses, and so the body decreaseth.

Woe may assure our selves that it is true, and that the Moone hath vnder God, as a second instrumentall cause, superiorty and domination vpon the foure humours of mans body, as Cholick, Blood, Firame, and Melancholly: Doctor Dee in his 103 Aphorisme, sayth thus: Luna potentissima est humidatum rerum moderatrix humiditatisq; excitatrix & effectrix. So that the best Doctors do hold this opinion, that all the infirmities which naturally come to any man (and not by any mischance, or inordinate accident) doth arise and come by the disproportionance of the foure humours: so wee may well conclude, that if the head of a Fontaine doth alter his course, or be infected, then the adiacent riuers, or descending Araines must needs differ either in quality, or quantity. So likewise the Moone, being of a passive quality collecteth and retaineth the good or euill influence of that Planet to whom she is adioyned or applyed, as well the Sunne, as wee see by prooffe euery night in the year. As that famous Philosopher Hermes sayth in his Astrotheumatikes: Luna vero stella (sive benifica sive maligna fuerit) vti se applicuerit, illi subiagabitur. And because her Orb is nearest vnto the earth, shee lendeth us downe the vertue and influence of all the other Planets, and so causeth the mutation or alteration of the weather, and of mens bodies, so healeth 12 sicknesses, this or that, according to the nature of the Planet, with whom shee is adioyned or configurated, and the part

of the Yodliche wherein she is situated. Dicit Hippo-
crates, good medicus primo aspiciat Luna, quando est
luna lumine, quia tunc crescit sanguis & medulla in om-
ni homine & medulla in bestijs omnibus, & organismum in
lari, & in cunctis mundanis rebus. And Aristotle saith,
vous & natura nihil agunt frustra: God and nature hath
nothing in vaine. And I will giue one reason more,
any thing upon the earth, reasonable, sensible, or na-
tural, were of one Element alone: the sickness could
not hurt it, nor disease corrupt it, but every compounded
thing being upon the earth, seeing it hath had a begin-
ning of the four Elements, it must needs be of necessity
dye.

These words before written, doth not frustrate the
words of the Holy Ghost, spoken to Adam: In that day
when thou eatest thereof, thou shalt dye the death. For
these words: The same soule that sineth, shall dye.
Where the efficient cause of Death, I faithfully beleeue
to liue. The afore sayd; evidently teacheth, that
we may take an occasion lawfully upon this matter, to
come to the true Astronomy, and Astrology of Christi-
ans, which is to contemplate the glory, infinite pow-
er, wisdom, goodness, mercy, and love of our
mighty God by his great worke of the Heavens. The
heavens declare the glory of God, and the earth shew-
eth the worke of his hands, &c. We are not as the Hea-
then, or the Stoickes, that beleeue in the Planets, and
fleece them for their Gods, and trusteth in them.
The afore sayd things being well considered, as they
are layd in vaine. Let Physicke and Chyrurgie be
instructed on such dayes, and aspects of the Moone
as the Planets as followeth, if you can know when
they be. But above all remember this: Medicus istum
quirit: That is, when the Physician is not payd, the
soule goeth backe-ward.

If therefore you desire to helpe, strengthen, or com-
mend the Vitall, or liuely power, whose seat is in the
heart, you must vse things temperately hot and drye,
hot and moist, and at such time as the Sunne is
strong, and well affected with the friendly beames of
Mercurius and Luna.

The naturall Vertue governed by Iupiter, Venus,
and Luna, and seated in the Liver, wherein are in-
cluded the four humors (spoken of before) and is
toxicus

A Prognostication.

fortified especially by Iupiter, he using both and many things, at such times as Iupiter is well disposed in the Horoscope, or configured with Venus, and the Moone being fortunate.

The animall Vertue distinguished into the intellectual part which Mercury governes, is the Venus which the Moone with Iupiter and Venus doe rule, and is best comforted under the afore-said Planets well disposed, and with medicines temperate, and agreeable to their natures.

The Vertue attractiue (one of the foure lesse passive and subseruing vertues) reioycing in the heats of business, and is fortified by things of hotte nature, the Moone passing under Aries, and Sagitary, and well aspected of Sol, or Mars fortunate, or the Moone in any other signe so aspected, and Aries, or Sagitary ascending in Domino &c.

The Vertue retentive delighteth in colde and dry things by the influence of Saturne, and is best comforted, the Moone seated under Taurus, Virgo, or Scorpio, and applying with a friendly aspect unto Saturne, or the moone in another signe so aspected, and either Taurus or Scorpio ascending in the East point.

The Vertue digestive is best strengthened by heat and moisture, and the influence of Iupiter, and is helped when the moone is under Gemini, Libra, or Aquary, and aspected of a friendly Planet, or if she be in some other signe, then it is fit that either Gemini, Libra, or Virgo, be rising in the ascendent.

The Vertue expletive delighteth in coldness and moistnesse, and that by the influence of the moone well aspected, and placed in Canero, Scorpio, or Pisces, while one of these signes are ascending. Give any medicine that is good agaynst womens, a day before and after the new moone: The like may be said of Caraplastres.

These things are apparent enough to well qualified Philosophers, Physicians or Chyrurgeons to prove that the Elements, Sunne, Moone, and Stars are instruments, and secondary causes to worke in all compound bodies, under the order of the Moone. The Heavens cause the earth to fructifie, and the Clouds drops farnesse. And the Philosophers sayth: Causa est etiam causa causati.

Certe

Certaine brieft Rules for Husbandry,
Gardning, &c. superstitiously attributed
to the Moone, moouing vnder the
12. Signes of the Zodiacke.

Salomon sayth: To all things there is an appointed
time, and a time to every purpose vnder the
Heauen.

AND Astrologers say, before you plant: or graft,
sc. consider the Sunne. for if it be in the North
or East, it is perilous. And I say: for the plant-
ing, sowing, setting, seeding, and preserving
of (simply) things, that places, and times of
erent nature and quality, are to be chosen and ob-
served: Non minus fort omniatellus. And so the pre-
siding, in Tauro, Aquario, or Capricorno; (and
best of all vpon *Sabine-tuesday*:) *Crescens enim*
humorem anget & corpore implet: *Decretum enim*
& exaurit. Good to sith or graft Cattle, when the
is in the Head, Tighes: or Knees. Good to
set all kinde of Trees, and Seedes, the moone
in *Extra impedimentum*, in the Head, Thell, Bellies,
or Knees: The moone in Tauro, Virgino, or
Capricorno, and in ♄, or ♀, aspect of Iamne. To
plant in Gardens, or cast into the ground, to
grow, or Delus, and to dresse your Vines, if
in moist ground, or the Nature of your Seeds
is such, the time is best after the full moone, it is best
if it is best in the Increase: But the Seeds whose
roots

A Prognostication.

rootes hereunto must be sowne, as Onions, Cabbages, or Turneps, &c. three or foure dayes before or after the full moone.

Sowther Apples and other Fruites, Herbes, and Flowers, to haue them in most beauty, and greater Vertue, the moone at the full. Sow or let Sallets, Lettice, Parsnips, Carrots, Beets, and Beanes, the dayes before or after the full moone. Sow leedes, and herbes for store, in the increase, from February vntill June. Good to fell Timber for building, in the wane of the moone, for the auoyding of Wormes, from May summer vntill January.

Good to plash hedges, fell wood to burne, that the Stocks may the better grow againe, the moone increasing in Ariete, or Libra. Cut Vines in February or March, the moone in Ariete, Tauro, or Libra.

Remouet Trees in the same Signes all the last quarter, in Nontember, September, or February. Destroy your Land, that the weedes may not abound, in the last quarter. The moone in Libra, or Aquario, is good to till the Gardens, and also to sow or let it, to plant, and also to make a Joy-yard, or to let the poles. Kill fat Swine neere the full moone, for the fat, the better to indure the boyling.

Good for abstractions, or weanning of Children, the full moone, or the moone Vac. curs. to make the more willing to forget the Nip, or Aurd.

See that is cast into Bilson, or shall fall into Rickesse, or bee sore wounded, the moone being Tauro, Leone, Scorpione, or Aquario, bee is not soone or easily to come forth, recover, or bee healed. A promise made will not lightly be kept, and rumour brought first to ones eare, when the moone is under Aries, Cancer, Libra, or Capricorne, will commonly prooue false. Dei igitur altissimi celum instrum, quo inferioro agit ag t, impellit, regit. For part, I doe attribute nothing to Time, Stars, planets, and foure Elements; but all Honour, Power, and Glory to the Almighty, that made them all; and hold them like as matters of Physicke, and Surgeons rather Chyrurgions do their Apothecary, and medicines, and Cataplasmes: for when they do them to their Patients, they are not sure that they take effect: Anyther do we or they say, this shall

A Prognostication.

to passe, or that medicine shall take effect. And both they and we say ought that I write, do deale with nothing else. but by Gods direction, and with his naturall and good Creatures. I do knowe, and also doe beleue, that Almighty Gods gouernement of the Heauens, Starres, and Elements, taketh not away the lawfull life and meanes of this secondary causes, instruments, and good Creatures. (as some would haue it) but they may stand euer together to the worlds end.

Soli Deo fit gloria.

An Abstract of a Direction, concerning Reall Contracts.

WHosoever shal desire to purchase, or put to Sale, to take in Lease, or let to Farme, to Grant, Assigne, Exchange, or otherwise to Contract, or Deale, with or for any Lands, Leases, Rents, Annuities,

justices, Mansion-Houses, Offices
saleable, or other Estates of what
Yearely value soever, or to save any
such from danger of Forfeiture, thro
rough the want of present money. May
either in their owne names, or in the
name of any other trusted by them,
have secure meanes with all privacy
required, for the speedy effecting what
shall be desired, in any the Cases afore-
sayd, or the like. At the Porcht-
houle against Saint *Andrewes*
Church in *Holborne*. LONDON.

God save our gracious King *Charles*.

A New Almanacke and
Prognostication, for the yeare
of our Lord 1631.

1631.

532. a

Being the third after Leape yeere. 2

Composed and properly referred
to the longitude and latitude of the Pole
Arctic of that famous City of London, and
may serve generally for the most part of Great-
Britaine.

With the exact rising and setting of the Sun
at London.

Longitude, 25. deg. Latitude, 51-32.

By DANIEL BROVNE, wel-willer to
the Mathematickes, and teacher of Astronomie,
and Geometry in Hoser-lane,

Astra regunt homines, & regit astra Deus.

A memoriall of the time sithence some great Accidents
vntill this present ycere, 1631.

Since the Creation of the world	5593
Since the vniuersall Deluge, or Noahs Flood	3917
Since the destruction of Sodom	3546
Since the Sunne stood still in Iosua's time	3034
Since the destruction of Troy	2814
Since Brute entred this Island	2738
Since the first building of London by Brute	2738
Since the Sunne returned ten Degres backe	2319
Since the faith and religion of Christ was receyued by Lu- cius King of Britaine	1444
Since the time of Constantine the great Christian that was Emperoz of Rome and King of great Britaine, the son of Helena Queene of this Island, and borne in Britaine; of this man the Kings of Britaine had first priuiledge to weare Diademes	1321
Since the Englishmen first arrived into this Island out of Saxonic	1179
Since Athelstane brought this Land to one Monatchy by conquering Scotland and Wales	706
Since Duke William conquered England	565
Since King Edward the 3. made claime to the whole Realme of France as his rightfull inheritance, & named himselfe King of France, and intermedled the Armes of England with the Armes of France, as it is to this day	392
Since King Henry the 8. conquered Bulloigne	87
Since Pauls-Chaple in London was on fire	70
Since the great Earthquake	51
Since the Campe at Tilbury	43
Since the Gun-powder plots, November 5.	26
Since the downfall at the Black Fryars on the Papist	8
Since his Maiesty began his reigne	6
Since the last great plague in London	5

A Rule to know when the Termes begin and end, and how many returnes are in them.

Hilary Terme beginneth the 24 of January, and endeth the 12 of February, and hath foure re- turnes.	{	Octau. Hilla.	Ian. 20
		Quind. Hilla.	Ian. 28
		Craft. Purif.	Febru. 3
		Octa. Purif.	Febru. 9

Easter Terme, beginneth the 27 of April, and endeth the 23 of May, and hath five returnes.	{	Quind. pasce.	April 26
		Tres pasce.	May 3
		Mense pasce.	May 9
		Quind. pasce.	May 14
		Craftin ascon.	May 20

Trinitie Terme beginneth the 10 of June, and endeth the 29 of June, and hath foure re- turnes.	{	Craft. Trin.	June 6
		Octa. Trin.	June 14
		Quind. Trin.	June 20
		Tres Trin.	June 27

Michaelmas Terme beginneth the 28 of October, & endeth the 29 of November, and hath 3 re- turnes.	{	Octab. Mich.	Octob. 7
		Quind. Mich.	Octob. 13
		Tres Mich.	Octob. 20
		Mense Mich.	Octob. 27
		Craft. animi.	Novemb. 3
		Craft. Mart.	Novemb. 12
		Octab. Mart.	Novemb. 18
		Quin. Mart.	Novemb. 25

Note also that the Exchequer openeth 8 dayes before any
Terme begin except Trinity terme, before which it openeth
onely 4 dayes.

The 27 day of March beginneth the yeare of King Charles
of Great Britaine, France, & Ireland, being the 7 yeare
of his raigne.

January hath xxxj dayes.

Old Ianus wils the hope thy body warme,
With kitchin phyfike thy diseases charme:
Sweet wine is good, but exercise is best,
For him that in his age would live at rest.

March hath xxxj dayes.

Watch off, leaue not busie occasion byge,
 For so thy body too busynly purge:
 More health is gotten by observing diet,
 Then pleasure tane by vaine excesse and riot.

Aprill hath xxx. dayes.

Coppage, to bath, or blood, is not debar'd,
So that the golden meane be well obseru'd :
It's also good to hunt, to ride and run,
So that extremes here in thou enter shun.

May hath xxxj dayes.

We hold to be such phisicall intentions,
As are prescribed by Treists true intentions:
But loath impostors, and quacksalving knaves,
That bring the soundest men & baseliest graves.

October hath xxxj. dayes.

Yet physicians helpe is not to be refused,
Of such as want, and warily can vse it:
God spore abroad for such as kepen hounds,
But best at home for him that hath no grounds.

A Prognostication for this present yeare of our Redemption. 1631.

Amplified with new Additions, very commodious and profitable: With new Tables and Rules thereunto Annexed, for all those that use Purchasing, or Bying of Annuities, or Borrowing: Fit for sundry occasions, which the Ingenious may use to their pleasure and profit.

An easie Table of the Raigne of each King in this Land from the Conquest.

Also a tide-Table according to the iudgment of Ancient Sea-men, and their Practise.

By *Daniel Browne* Well-willer to the Mathematickes, that teacheth Arithmetick and Geometry.

Soli & uni trino Deo honor & gloria.

L O N D O N.

Printed for the Company of Stationers.

1631.

A brieve declaration of the four quarters of this yeare. 1631.

Solin, Wm and M.

Hereafter. Winter, the Spring, Sommer,
and Haruest shall not cease, so long
as the earth remaineth.

Winter according to our English ac-
count, began the 11. of December
1630. the time of the Sunne en-
tering in to the first degree of the
cold and dry signe Capricorne,
at which time was the shortest day in the yeare,
by reason of the Sunne his greatest declinati-
on from the Equinoctiall, during which he haue
gone to the latter part of Pisces, it is the col-
dest time of the yeare, and the coldest and dryer
the wholesomer; yet over much colde killeth
trees in a warme Region especially such as
betender. A warme and moyst winter is vns-
wholesome, and an enemy to Husbandmen,
but reasonable store of Snow doth ranken the
fields and preserve Corn.

The diseases of this quarter must be of cold
and moyst nature, such as are Lenteries, Dilen-
tries, Collicall, and Iliacall passions, coughes,

A brieft declaration of the
four quarters of this yeare. 1631.

Sol in ♄ and ♋

Hereafter. Winter, the Spring, Sommer,
and Haruest shall not cease, so long
as the earth remaineth.

Winter according to our English ac-
count, began the 12. of December
1630. the time of the Sunne en-
tring in to the first degree of the
cold and dry signe Capricorne,
at which time was the shortest day in the yeare,
by reason of the Sunne his greatest declinati-
on from the Equinoctiall, during untill he haue
gone to the latter part of Pisces, it is the col-
dest time of the yeare, and the coldest and dryer
the wholesomer; yet over much colde killeth
trees in a warme Region especially such as
berender. A warme and moyst winter is vns-
wholesome, and an enemy to Husbandmen,
but reasonable store of Snow doth ranken the
fields and preserve Come.

The diseases of this quarter must be of cold
and moyst nature, such as are Lienteries, Diten-
tries, Collicall, and Iliacall passions, coughes,

A Prognostication.

Convulsions, Relicks of putref. Fevers, &c.

Solin V & and II.

The Spring is the most comfortable quarter in the yeare, and is of nature warme and moist, for then the Sunne draweth neere to the Zenith, comming towards the starres of a warme nature, and then the East winds blowe, dispersing the superfluous humours, making the earth apt to bring forth all things, for the good and comfort of man and oher creatures.

This quarter beginneth when the Sunne entereth into Aries, at what time the dayes & night be equall, and continueth untill the 12. of Iune, at what time the Sunne hath runne through Aries, Taurus and Gemini.

If the Spring be much moist, the fruite will be rotten and scarce, but weedes will abound: if hot, the trees soone bring forth leaues, if cold and dry, there will beare frosts fall in the end of the quarter, according to the full & gone, the which frosts, is the cause of the blaking of the blossomes of fruit trees, and the burning of the cogne, the suspected times of this euill successe of fruits is knowne the 13. or 25 of Aprill, and the 9 of May for the calmenesse and clearenesse of the ayre, at that time is a good signe.

Pliny

Pliny noted, and to our memory committed to
these Constellations: First, Virgil, for the
fruits: Secondly, Aquila, for the corn: and
thirdly, Canicula, for the gathering of fruits,
and therefore they were named, the Iudiciall
stares, in whose dapes, of the first appearance,
if the ayre were cleare and calm a good signe.

The diseases of this quarter, be small pox,
falling sicknesse, feavers of blood, paines in the
thoate and necke, the Kings evil, grieke in the
shoulders and armes, caused by blood.

Sol in ♄ ♏ and ♐.

Go to the Pismire, O sluggard, be-
hold her wayes, for she prepareth her
meate in the summer.

Summer is of nature hot and dry, like the
serp triplicite, or like the cholerike: it takeeth
beginning when the sun entreceth Cancer, conti-
nuing untill he have passed over Cancer, Leo, &
Virgo. And now is the time that choler most as-
boundeth, being the hottest time in the year:
but in the beginning there rise certaine starres
in Cancer, whose nature is to make moths, espe-
cially Aelli, of the nature of Mars, & the Moone,
so that the sun coming to them, some raine
fallerh of fructifie the earth.

♄

♏

A Prognostication.

If the Summer bee ouer wet, the summer fruites shall putrifie. If the Summer exceed in heate, many sicknesses will happen, is to conclude, it be cold, the yeare will bee whole. Some, but the fruites rotten.

This Quarter, as it is hot and dry in nature, so doth it accordingly alter the humours in mans body, the sicknesses agreeing to the nature thereof, be griefes and torments about the breast, ribs and spleene, the Plurisie, veracions, Apoplexies, pestilence, fencers, paines in the belly and secret parts proceeding of melancholly.

Sol in π and γ .

Let vs feare the Lord our God, that giueth raine both early and late in due season, he reserveth vnto vs, the appointed weekes of the Haruest.

Autumn is the fourth and last quarter Astronomically, by nature is cold and dry melancholly, like the old age resembling the element of the earth, beginning at the Sunnes first ingresse into Libra, producing thereby the second Equinoctiall, coequating the dayes with the nightes, making an apt time to take Phlecke, bleed, &c. but in that Liba is a Signe of the Fire triplicity, there is produced heat, with temperate moisture, but comming to Scorpio, the ayre is made more cold and moist. For Scorpio is of the watery triplicity, but coming

ing to Sagittarius a signe of the fier & triplicity,
accompanied with certaine starres of a warme
nature, there is made a restraint of the extremi-
ty of wet and cold, for the good of such as sow
and plow.

The diseases of this quarter, be paines in
the backe, retention of Urine, fluxes of blood,
Absuloes, Emerods, the Stone and grauell, se-
uers, and impediments in the eyes.

If Autumne be moyst and wet, the fruite wil
be putrified, and there will be want of fruit the
ensuing yeare. If the beginning be dry, there
will Penuria milij, If hot many sicknesses, If
cold there is losse of harvest frutes in quanti-
ty, Turce and beany.

place and course of the Moone in the Zodiacke

Three things are chiefly to be respected in
the use of Iurizations, that is, the time, age

A Prognostication.

and coninnction, Quarrile, or opposition of Saturne
or Iupiter and Mars to the Moone or between
themselves, hindreth the operation of the
Ache.

Let not the moone be in signes that cheise the
cud, as Aries, Taurus, and Capricornus, or ioyned
to a Planer that is Retrogard, for the cause, be-
mit saith Hermes, in his 74. Propo.

Ptolomic, in the 10 of his Contilog. aduerth-
leth, that medicines are not to be ministered
when the Moone is ioyned to Iupiter, for the
Moone being with Iupiter, the effect thereof will
be abated, for ♃ is wet & moist, in which qua-
lity resteth the digor of life.

Purge not the	Splene, Saturne being strong.
	Liuer, Iupiter being strong
	with Saturne.
	Heart, in the houre of Sol.
	Lunges, Mercury being strong.
	Gall, Mars being fortified.
	Members of generation, Venus
	being strong.
	Braine, the Moone being for- tified in heauen.

- If you purge, let not Leo be ascending, for
causeth vomit of the principall vertues which
are subdiuided, there is one kinde which pre-
ueth man in his being, and this resteth chiefly
in the members of generation, and is gouerned
Venus.

The prin- cipall parts of man, the	{	Virall	} is in	{	Heart gov. of
		Naturall			Liuer gov. of
		Animall			Braine gov. of

A Prognostication.

— Dresse oꝝ prune vines about the full Moone
she being then in δ Ω \mathbb{M} oꝝ \mathbb{P} .

Geld oꝝ libbe cattell from the last quarter
the change, the \mathbb{C} safely placed under γ \mathbb{P} oꝝ \mathbb{M} .

Shoere Sheepe the Moone free and in
creasing.

Reape Corne and cut doꝝne hay presently af-
ter full Moone.

Fell Timber for building towards the latter
end of winter, in the last quarter of the Moone
in a Δ and \star of h . plash hedges, and lop
trees for sawell, the \mathbb{C} increasing in γ Ω .

hairs } ter } the \mathbb{C} in { \mathbb{Q} decreasing
not } δ \square δ δ of h

meane children towards the full \mathbb{C} , and
Vacua curs.

There will be two Eccleses both of the
Moone this yeare 1631. The first Eccle-
of the Moone will be the 7. of May at 6
33. minutes in the after-noon. The second
Eccleple will be the 29. of October, at 10. and
minutes at night. These Eccleses of the
Moone, are sayd to be when the Sunne and
Moone are opposed one to the other Diamet-
cally, and the earth in the very midst betwixt
them both: for the body of the earth being thick
and not transparent, casting his shadow to the
point which is opposit to the place of the Sunne
will not suffer the Moone to receiue any light
from the Sunne, from whom she alwayes be-
rowerth her light. And therefore the Eccleple
the death of Christ, was miraculous: for

then at the full of the Moone, and the Sun
 never eclipsed but at a new Moone. And
 so Dionysius a Senatour of Athens be-
 coming it, cryed out saying, Either God this
 suffereth, or else the world must needs perish
 ever, he being at that time 980. miles from
 Ialem.

5	20	4	0	7	0	Timouth, Hartle pog. 3 0
6	21	4	48	7	48	Barwick, Offend. 4 58
7	22	5	36	8	36	Fryth, Lysb. Dumb. 4 30
8	23	6	24	9	24	Falmor, Seurr. mo. 5 10
9	24	7	12	10	12	Foy, Lin, Waym. Mart. 6 0
10	25	8	0	11	0	Bristow, Plum. 7 33
11	26	8	48	11	48	Milford, Bridg wat. 7 30
12	27	9	36	12	36	Portland, Peterpa. 8 11
13	28	10	24	1	24	Diep, Lux. Luuys. 9 40
14	29	11	12	2	12	Bol Doue, Yarm. 10 30
15	30	12	0	3	0	Calice, Rye, Winchester. 11 11

To know the time of the Tides, find the age of the Moone her age being found, looke in the Table as what time she cometh to the South at the same age, and to that time then found, add the houres and minutes, following the name of the place where you desire to know the tide.

Example. The Moone being . . . dayes olde, cometh to the South at two of the clocke, and 24. minutes, then if you desire the high water at Redban, you must add 45. minutes more, here you have of the clocke and 9. minutes, the time of high water at Redban. And the like order is to be obserued in all other places. The time of high water at London, you shall find for each day of the Moone in the Table.

God saue our gracious King Charles.

Note also, that the Exchequer openeth
eight dayes before any Terme begin (ex-
cept Trinity Terme) in which it openeth
but fower dayes before.

*A true Description of the foure
Quarters of this yeare.
And first of Winter.*

○.in v^p m. x.

VV Inter (according to our English accompt) began the last passed yeare 1630. the twelfth day of Decēber; at which time the Sunne entred into the first minute of the Celestiall Signe Capricorne, making the shortest day and longest night in the yeare; which Quarter is naturally cold and moist. When the Sunne is in Capricorne, cold reigneth more then moysture: And in Aquarius, it is equally cold and moyst: The Sunne being in Pisces, it is more moyst then cold; and for the most part, store of wind is stirring, especially in the midst of Winter.

The Diseases subiect to this Quarter,
are colde Flegmaticke and Melancholly
B 3 sicknesses,

A Prognostication.

sicknesse, as Scabs, sore eyes, melancholy, Rheumes, Coughes, Cathars, Sciaticae, much sicknesse amongst Women, &c.

For the iudgement of the weather, you may see it in the daily disposition of each moneth hereafter following.

Of the second Quarter of the yeare, called the Spring.

☉ in ♋. 8. II.

THe Spring (according to our Astronomical account) begins vpon the tenth day of March, when the Sunne entereth the first minute of Aries, making the Vernall Equinoctiall, the dayes and nights of equall length throughout the whole world; and in generall, is of nature hot and moyst, but very vnconstant, as sometimes hot, and sometimes cold. The cold of Winter is now diminished, and the powers of the Earth which haue bene long shut vp and bound with cold, are now loosened, by reason of the Sunnes approaching toward our Verticall Circle; and moysture often falleth by reason of the necrenesse of Winter. In the beginning (the Sunne

Dade. 1631.

Sunne being in Aries) the weather inclineth more to moysture then heate, and in the middle (the Sunne being in Taurus) it is equall for heate and moysture, as sometimes hot, and sometimes shewy; and in the end of this Quarter (the Sunne being in Gemini) it is more hot then moist. In this Quarter vsually there are many soudaine stormes of wind, by reason of the meane temperature of the ayre.

The sicknettes of this Quarter, are small Pocks, Measells, Scabs, many hot diseases proceeding of corrupt Blood, as Fevers, &c.

*Of the third part of the yeare called
Summer.*

☉ in ♋ ♌ ♍.

Summer beginneth the twelfth day of June, at that time when the Sunne entereth into the first minute of Cancer, and reacheth his greatest North declination, making the longest day and shortest night of the yeare. This Quarter (according to the naturall disposition) is hot and dry. In the beginning (the Sunne being in Cancer)

A Prognostication.

cer) heate ruleth more then drinesse: and in the middle (the Sun being in Leo) it is more dry then hot: And for the most part there are small store of windes stirring this Quarter, especially in the midst of Summer.

The Diseases of this Quarter, are hot burning Agues, Scabbs, Pustles, laundies, griefe of the head and backe, &c.

Of the fourth part of the yeare, called Autumne, or Fall of the Lease.

☉ in ♎ m 7.

HArvest, or Autumne, (being our last Astronomical Quarter of this yeare) beginneth at the entrance of the Sunne into the first minute of Libra, making the dayes and nights of equall length. which happeneth vpon the thirteenth day of September.

This Quarter according to his nature (quality) is cold and dry: The Sunne being in Libra is more dry then cold: And the Sunne in Scorpio, is equally cold and dry: And in the latter end (the Sun being in Sagitary) it is more cold then

Dade. 1631.

In Autumn (as in the Spring) there are many boysterous windes often stirring, and it is dangerous for most Diseases, which are now apt to be taken, and now there is least remedie for the same.

The Sickneses of this Quarter are divers, as Crampes, Tooth-ach, Rhumes, Hoarsenesse, Coughes, Melancholy, Fluxes of blood, Falling sicknesse, grieve in the Backe and Kidnies, &c.

*Two Eclipses of the Moone, that
happen this yeare 1631.*

TH E first is upon the fifth day of May, being Thursday, halfe an houre past five of the clocke at night.

The second Eclipse upon the 29 day of October being Tuesday, about halfe an hower past seven of the clocke at night.

A brieſe deſcription how the Planets
are Placed aboue the Earth in the Skie, for
euery month after Sunne ſetting, or before his
riſing, by which you may perceiue how they keepe
their motion day and night all the yeare. Moreo-
uer, the new, full and Quarters of the Moone,
with Aſtrologicall iudgement of the wea-
ther for each day of the yeare. Alſo
huſbandry inſtructions for each
Moneth of the yeare.

Of Ianuarie.

Saturne is paſt mid-heauen at Sun-ſet.
Iupiter is neere mid-heauen at Sun-riſing.
Mars and Venus ſet a while after the Sun.
Mercury ſets a while after Mars and Venus.

July hath xxxj. dayes.

Now in Iuly Dog dayes begin,

The Riuer are best to bathe in.

To take hot drinckes be not too bold.

But vie hearbes which be moist and cold.

ANNO. 1631

A Prognostication serving for
the yeare of our Lord God and
Saviour Iesus Christ.

1631.

Wherein you may obserue the
grounds of the alteration and condition
of the foure Quarters of the yeare; as al-
so the disposition of the Ayer for each
seuerall moneth, according to the incli-
nation of the Celestiall bodies, with the Change of
the Moone, and the time of the Eclipses,
and other necessarie obseruations,
conuenient in such a worke
to bee noted.

Calculated, and especially referred to the
Longitude and Elevation of the Pole Ar-
ticke of the ancient and famous City of
Norwich, and may serue for all

ENGLAND

¶ Collected and published by
Joh. Nere, Gent.

A necessary rule to know the beginning and ending of every Terme, with their returns.

Hillarie Terme beginneth the 23. of January, and endeth the 12. of February, and hath foure Returns.

Octabis Hillarij.	}	}	Craftino Purif.
Quind Hillarij.			Octabis Purific.

Easter Terme, beginneth 17. dayes after Easter, and endeth the Sunday next after Ascension, having five Returns.

Quind Paschaz.	}	Mense Paschaz	}	Quind Paschaz.
Tres Paschaz.				Craft. Ascen.

Trinity Terme, beginneth the Friday after Trinity Sunday, and endeth the Wednesday fortnight following, and hath foure Returns.

Crafti Trinitatis.	}	}	Quind. Trinitatis.
Octabis Trinitatis.			Tres Trinitatis.

Michaelmas Terme, beginneth the 9. of October, and endeth the 28. of November, & hath eight Returns.

Octabis Michael.	}	}	Craft. Animarum.	}
Quind Michael.			Craft. Martinj.	
Tres Michael.	Octabis Martinj.			
Mense Michael.	Quind Martinj.			

Note that the Exchequer openeth eight dayes before any Terme begins, except Trinity Terme, in which openeth but foure dayes before.

On these dayes following, the Judges sit at Westminster.

Cem

Certaine profitable Rules, and briefe
obseruations, concerning Husbandry.

The best time to sow all kind of Corne, is when the
Moone goeth her course in Cancer.

The best time to plant and graft, when the Moone
is in a fixed signe, especially in Taurus or Aquarius: and
in the increase of the moone, which is betwixt the
change and full.

To set and sow all kind of seedes, the Moone being
well seared in Aries, Taurus, Virgo, Libra, Capricornus,
Aquarius, or Pisces.

Best timber to build withall, when the Moone is
towards the last quarter, the being then in Aquarius or
Pisces.

Crop trees & fell wood to burne, that the soyle may
the better and sooner grow againe, when the Moone is
in the first quarter.

Remoue and set young trees, in the last quarter of the
Moone, in Taurus or Capricornus, & that in the monthes
of September, October, November, and February.

The best time to geld Cattell, the moone being in
Aries, Sagittarius, or Capricornus.

The best time to cut Wines, is in February or March,
the Moone increasing, in Taurus, Virgo, or Libra.

The best time to shear sheepe, is in the increase of the
Moone, that is from the change to the full.

To cut haye that is may the soyle grow againe,
the Moone increasing in Taurus, Virgo, or Libra.

To make your land that the husband may not grow
barren, is in the decreasing of the Moone, that is from
the full to the change.

Of the Eclipses which shall happen this present
yeare of our Lord God. 1631.

There will this yeare, be presented unto the view
of the Inhabitantes of the earth, foure Eclipses

A Prognostication.

of the two great Luminaries or lights of Heaven, the
of the Sun, and two of the Moone, but not any of them
the Sun shall visibly appeare in this our Horizon.

Of the first Eclipse of the Sunne.

Vpon the 20. day of Aprill, according to the Julian
or English yeere, but in the reformed yeare on the
30. of the same moneth: will sensibly and visibly ap-
peare, a small Eclipse of the Sun vnto the people that
inhabite about the innermost part of the land of Meg-
hanica, which hath in longitude. 108. degrees, and in
south Latitude 63. degrees. The poynts or degrees E-
clipsed will be 4. and 30. minutes.

Of the Second Eclipse of the Moone.

There shall visibly appeare a great and totall E-
clipse of the Moone, on the 5. of May 46. minutes
after 6. of the clocke at night, but in the reformed yeare
on the 15. of the same moneth: This Eclipse will not
so evidently appeare in England, as to people further
Inhabiting towards the East, as Tartaria, and other
Countreies adioyning: The quantitie or degrees E-
clipsed, is 22. and 2. minutes. This Lunarie obscura-
tion from the beginning to the ending, will be 3. hours
and 51. minutes.

Of the Third Eclipse

Vpon the 15. day of October, betweene 6. and 7. of
the clocke in the morning, but in the reformed
yeare on the 25. of the same instant moneth, the bright
Globe of the Sun shall be againe Eclipsed or darkened
by the direct interposition of the body of the Moone be-
tweene him and the earth, they being both at that in-
stant conioyned together in Scorpio.

This accidental obscuratiō of the Suns will be
it selfe vnto those people that are more situate
towards the East, in the great Empire of Tartaria,
Cathais, Calacia, and the Belgian mountaines, in the

gree of Longitude of 164. and North Latitude 3. or
thereabouts. The totall durance of this Eclipse, will
be one houre and 55. minutes.

Of the Fourth Eclipse.

There shall appeare another great & totall Eclipse
of the Moone in our Horizon on the 29. day of Octo-
ber, 36. minutes after 10 of the clocke at night, the be-
ing at that instant placed in the second face of Taurus
and diametralie opposite vnto the Sun, (neare Capric
Draconis) in a signe of the earthly Triplicitie, natu-
rally cold and drie, of complexion Melancholike, femi-
nine, Meridionall. fixed, the house of Venus, and the
exaltation of the Moone: The poynts of degrees E-
clipsed, is 19. and 57. minutes. The whole duration
of this obscuration shall continue from the beginning to
the ending, foure houres and 3. minutes.

Briefe Rules, and necessarie obseruations, con-
cerning Bleeding, Bathing, Purging, and Sweating,
according to the motions of the Moone.

Vhen the weather is extreame hote or colde,
it is not then convenient, either to let blood
or to purge, vntlesse some great necessitie doe require
it: yet notwithstanding, if this bloodletting be for the
Phrensie, the Apoplexie, for a continual head-ach pro-
ceeding of choller or blood, or any hot burning Ague, or
other extreame paine, a man in such a case may not tar-
re a chosen time, because the patient might miscarrie
in the meane season. But in this foresaid case of ex-
tremity, blood is not to be let in such a quantity as o-
therwise it would, if a chosen time might be expected.
The best time to let the Phlegmatick blood, is when
the Moone is in Aries, or Sagitarius, the head is highest
emptied.

A Prognostication.

For the Melanchollic the Moone being in Libra, or
Aquarius, the buttocks and legges excepted.

For the Cholericke, the Moone being in Cancer, Scorpio, or Pisces, the breast and feete excepted.

For the Sanguine all be good which before is named.

In Spring time let blood at the right side.

In Summer time, let blood at the left side.

For Bathing.

Things, are commonly doted rather for pleasure
then for profit, especially where hot-houses are
so much haunted, but I mind not to speake of them
in this place, otherwise then to advertise those that
for their owne health, to be waite and circumspet
reforring unto them without cause, and immediately
after such such persons as be delicate. Knowe that
it is not good to bath the moone being in enervable signs,
as in S. 11. or 12. the reason is because they are of cold
and drie nature, and the nature of Cold is to redden
and bind, and so the moone being in these signs the
pores of the body are closed and shut, so that there
can be no resolution of humours & superfluities, which
by bathing ought to be removed.

But in fiery signs, as when the moone is in V. 4. 5.
3. then it is good time for bathing, for then the body is
apt to resolution, for it is the nature of heat, to open
and resolve.

It is best bathing. 1. or 2. daies after the change, or
at the full of the Moone. for then the superfluities are
ripe and ready to move and disposed to flow and
out, which is indeed the end and use of Bathing.

If any will enter into the bath onely for cleanness
take let the moone be in S. or 11.

Furthermore if Bathing be doted for health, be
partly grieved learne of the wise Philistion, who

his sickness hath need of moystening, or drying, for if it doth require moystening, as in Palsie, and the like, then let him bath in watery signes, hauing good aspects of Iupiter or Venus; But if the sickness require drying as in Paralysis and the like, then let him Bath the moone being in fiery signes, hauing good aspects of Mars and the Sunne.

Also before you enter into any Bath, your body must be first purged, for if you goe in vnprepared & unpurged, peraduenture you may be worse then before.

The best time of the yeare to Bath in, is the Spring and Harvest, and in the moneth of May and September. The best time of the day to goe into the Bath, is one houre after the Sun rising at the least, alwaies providing, that you must walke either an houre or halfe an houre before, and haue a stoole either by nature or arte you must couer your head well, so long as you be in the Bath, and beware you drinke not cold drinke although you be very thirsty, but forbear all things that be cold, least when you are hot within, cold strike suddenly into some principall member and so hurt you.

The time of tarying in the Bath, is commonly one houre, but it may be more or lesse, according to the nature of the Bath, or sickness of the party, at the discretion of the wise Physician.

For Purging.

- In purging these things ought to be known
1. The humour which aboundeth.
 2. The best way to remove it.
 3. The strength of the person.
 4. The manner of the sickness.
 5. The force and nature of the medicine.
- for when these things are not considered and observed, many perillous accidents may follow, and greatly hurt and grieue the body.

A Prognostication.

Good signes for purging generally, are Cancer, Scorpio, and Pisces.

Particularly, as with potions, or drinks, the moone being in Scorpio.

Purge with Electuaries, the Moone being in Cancer.

Purge with Pills, the Moone being in Pisces.

Take Preparatiues, the Moone being in Gemini, Libra, or Aquarius.

Take vomits, the moone being in Aries, Taurus, or Capricornus.

Take Gargarises, the moone in Aries, Cancer, or Capricornus.

Take Clysters, the moone being in Libra, or Scorpio.

To prouoke needlings, the moone being in Cancer, or Libra.

To stop Fluxes, Rhumes, and Laxes, the moone being in Taurus, Virgo, or Capricornus.

Good to comfort the vertue Attractiue, the moone in Aries, Leo, or Sagittarius.

Good to comfort the vertue Digestiue, the Moone being in Gemini, Libra, or Aquarius.

Good to Comfort the vertue Retentiue, the moone being in Taurus, Virgo, or Capricornus.

Good to comfort the vertue Expulsiue, the Moone being in Cancer, Scorpio, or Pisces.

For vsing of vnguents or plaisters, it is best to be applied, when the moone is in that signe which governeth the same member or part of the body, to which is applyable.

For Sweatings.

Sweatings as they are of two sorts, that is to say Naturall, and artificiall, so they are vsed for two ends and purposes: The naturall Sweat, if good humors

taken in opening of the Pores, will dissolve grosse and
thicke humors. It will cleanse the blood, will comfort the
spirits, will put away cold, will consume rancid hu-
mors, qualifie and quench raging feavers, will helpe
humors, and the droppe.

The artificiall Sweat, will cleanse scabs, put away
itch, amend dulnesse in the hearing, ease the stone, re-
solve conicalled and cold melancholy blood and humors.

But for the better performing, and effectuall wor-
king in these causes, the counsell of the learned Physi-
cian is to be desired and blessed.

The best and meetest signes to sweat in, are Leo, A-
ries, and Sagittarius, and that two or three dayes after
the change, and at the full of the Moone.

And note that sweating, is better to bee done in the
evening, then in the morning, for when the body hath
nourishment within, the spirits shall not bee drawn
utterly forth, to the extrinsic parts.

Note further, that leane folkes, and dry or feeble
persons must sweate little, for it will hurt them much,
but fat folkes may sweate well, and it will doe them
much good.

*A Brieve Description of the Four Quarters
of this yeare of our Lord God. 1631.*

Of Winter.

Winter, (which is the chiefest Capitall for
for the Spring, the disgrace of Summer,
and the deepe deuourer of the fruitfull harvest,) began
to take his effects according to our usuall computation,
the 12. day of December in the yeare aforesaid, at the
entrance of the sun into the first minute of the signe
Capricorne, at which time the Sun shall be at his grea-
test South declination from the Equinoctiall line, so
that

A Prognostication.

that he riseth South-east, and setteth South-west. Now is the Hiemall or winter solstice, for the sun is farre remoued from our Zenith or verticall point, so he cannot decline any further, & stands at a stop or stop, and then is the shortest day & longest night in the year, and this quarter both continue untill the 17. of March next following.

This season is by nature cold and moyst, dangerous for the most part to travellers, either by Land or Sea, and unto aged persons, it is very commodious & noysome, causing superfluity of rancidnesse, and abundance of moystnesse to overflow their bodies, to their great troubles and disquietnesse.

The diseases incident to this Quarter, are Spasms, Gouts, Poles, hoarsenesse, Catharres, Dropsies, Stone and Strangurie, Palsies, Consumptions, and cold diseases that comes by want of blood, are as usual to the condition of this season.

Thus will the starres if God assent,
Whose power alone, can all prevent.

Of the Spring.

The Sun (which is the eye of the world, the fountain of light, and the chiefe moderator of all the rest of the lights) hath like a Spane run his race, finished his revolution, (Gradatim) throughout the 12 signes, and now beegineth his iourney afresh againe, goeth an even course, and so becomes an indifferent divider betweene the night and the day, and maketh an equality throughout his whole government, to the joy & comfort of all his reuiued subiects, chearing with his splendant countenance, the poore afflicted world with the weeds of this our dark Star of mortality, (with the darkened countenance of winters extremity had almost subdude,) with his excellent presence, whereby

erth begins to smite, and to put on her new apparrell,
the flourishing livery of fresh Flora.

This season is by nature hot & moist, the most tem-
perate time of all the yeare, & the least breeder of sick-
ness that doth procure death, and a very convenient
time, for the removing of sicknesses and griefes gotten
before, and also to auoyd and prevent those that are to
come: for now the dull senses & spirits of man & other
creatures are quickned and reuiued, and therefore the
humors which doe abound, and are readiest to represse
nature are fit to be emptied and auoyded, whether by
sweating, purging, or otherwise as the learned
Physician shall aduise, and as the cause of the disease
shall require, such therefore as be diseased, let them not
neglect this time.

Sicknesses like to rage this quarter, are small poxes,
measles, squinances, hot feuers, obstructions, jaundise,
hiccoughes, and such like as proceed of the corruption of
blood.

Infections from the starres may fall,
But one aboue doth stay them all.

Of Summer.

Summer the third part of our vulgar yeare, accor-
ding to our vsuall computation, now when the Sun
hath fully determined the Spring time, with his last
shade of Gem: and hath mooued in his motion to the
highest point of his course, namely to the first degree of
Cancer, which shall be this yeere on the 12 of Iune. Now
the second Solstice of the yeare, called the vernall or
summer Solstice, for euen as the Sunne when he en-
ters into γ . hath his greatest South declination from
the equinoctiall line: so now at his ingresse into the be-
ginning of Cancer, he hath his greatest declination to-
wards the North from the sayd equinoctiall line, and
euen

A Proghostication.

men then as at the tyme of the winter Solstice he is
so farre remoued from our verticall poynt that he
not moue no further towards the South, & was ther-
fore to approach againe towards our North Latitude
at which hee seemeth to stand: So now being come
neere our Zenith, that he cannot moue no further
wards the North, and is therefore to reuert againe
wards our South Latitude. At his first going
vs hee seemeth also to stand, insonmuch that euen
foze at his retorne towards vs againe he made
the shortest day and longest night in the yeere: So
at his retorne from vs, hee maketh with vs contrarie-
wise, the longest day & shortest night in the yeere: &
afterwards declineth more and more from vs, as he
he moued towards vs.

This season according to his proper nature is he
dry, turning the humors of mens bodies, from cold
and moysture, into hotnesse and drynesse, resembling
the Element of fire, & complexion of Coler, bringing
all fruits to their ripenesse, cattle to their fatnesse,
men to their wealth.

The sicknesses like to preuaile in mens bodies
Summer quarter, are burning feauers, Phlegme
hot inflammations, and such other distemperatures.

Though Sarres incline to worke vs ill,
All shall bee as the maker will.

Of Autumne.

Autumne, according to our accustomed com-
mon the last quarter of this yeare, beginneth at
Sunnes departure from the last scruple of Virgo
into the first degree of the second equinoctiall
Libra, the which will be this yeare on the 14. of Sep-
ber, the day and night being of an equall length, as
the spring: At which time is the Autummall Equinox

et all, for euen as at the Sunnes entrance into Aries,
the day by increasing from the winter Solstice till
the equinox, came to bee equall with the night, going on still
more and more till the Summer Solstice, when was
the longest day and shortest night. So now the night
increasing from the Equall Solstice, to this the
Sunne ingredience into Libra, hath got to be equall
with the day, and shall increase more and more till the
small Solstice come againe, when the night is lon-
ger and the day shortest. This time of the yeare, is of
itselfe vnconstant and variable, warme in the day time
and cold in the night. This quarter because of the in-
equality of temperature, may as Hippocrates saith, bee
called the mother or nurse of deadly sicknesses. And
Galen saith, that this time of the yeare is very dange-
rous for taking of sicknesses.

The infirmities subiect to this quarter, are obstructi-
ons, quartaine Agues, Hemorrhoids, Dropsies, Vertigo,
and all other melancholly diseases,
which the Lord deliuer vs from, Amen.

Thus euery planet in his kinde,
Is to performe the Almightyes minde.

Declaration of the inclination and disposition
of the wiuds and weather, according to the di-
rections and influences of the erraticall and
planetary starres: with the day, houre, and minute of the change
of the Moone, her full and quarters: and also of the rising and
setting of the Sunne, in euery Seauenth day of euery Moneth of
the first yeare of our Lord God. 1631.

Of January.

Day.	The Sunne riseth.	The Sunne setteth.
1	houres 8 and 3 minuts	houres 3 and 17 minuts
7	houres 7 and 56 minuts	houres 4 and 4 minuts
14	houres 7 and 46 minuts	houres 4 and 14 minuts
21	houres 7 and 34 minuts	houres 4 and 26 minuts
28	houres 7 and 23 minuts	houres 4 and 37 minuts

Full Moone the 8 day 16 min: after 4 of the
in the morning, disposed to some stormes.

Last quarter the 14 day 43 min: after 10 of the
at night, wind and cold.

New Moone the 22 day 35 min: after 7 in the
ning, stormie weather.

First quarter the 30 day 17 min: after 8 in the
ning, winterly weather.

Januaries Abstract.

In this moneth, let not blood, neither vse but little
leche, except great necessity constraines thee, and
ware of taking cold, for in this moneth Humors
flegme do much increase: to fast long is hurtfull,
drinke white wine fasting is good and wholesome,
meates that are naturally hot moderately, and
warne cloathes.

In worldly busines, this moneth you may see
kind of common fruit trees, or plants, as
Plum, Cherrie, filberd, Walnut, and such like
thorne, and all sortes of quicksetts, trees or plants
fittest to be generally set from the change to the
quarter.

Take away mosse & superfluous branches from
trees, and this moneth is good to set Beans, Peas,
Parfnips, Radish, Leekes, Garlike, Turneps, &c.
nions, if the weather be mild & the moone past her
you may begin to graft at the end of this moneth
the moone being increasing in her light good husbandry
also this moneth, crop their trees, fell timber, and
cattle, such as may be gelded, the state of the moone
waies considered.

Of February.

The Sunne riseth.	The Sunne setteth.
houres 7 and 12 minutes	houres 4 and 47 minutes.
houres 7 and 4 minutes	houres 4 and 56 minutes.
houres 6 and 50 minutes	houres 5 and 10 minutes.
houres 6 and 34 minutes	houres 5 and 26 minutes.
houres 6 and 22 minutes	houres 5 and 38 minutes.

full moone the 6 day 14. min: after 4 of the clocke in
afternoone, apt for the season.

Last quarter the 13 day 14 min: after 7 in the mo=

on, temperate.

New moone the 20 day 39 min: after 10 at night in=
red to moisture. *Februaries Abstract.*

In this moneth all kinie fish, milke, and rice, and
like, that doe oppilate or stop the liuer vaines,
thicken the blood, are to be eschewed as enemies to
aleth, also yet forbear phisicke and letting of blood,
yet great necessity doe bidge, and learning proucell doe
adise you, beware of taking cold, for now Agues are
to be taken, & it is very ill to take heates, and af=
wards subdaine cold vpon them.

Now is the most apt time to graft, plant, and to set
kind of trees and bushes, the winde and weather e
age of the moone aforesaid considered: peas, beanes,
beans, onions, parsnips, and such like as in January
very fitly be set, in the wane of the moone. The
is now to tryn by Gardens, to set & sow all kinde
itching hearbes, to set slips, sow turnells, mustard=
seeds, set hops, vines, cut and proune them, sicke
your counsellall pease, and hawthornes.

Of March.

The sunne riseth.	The sunne setteth.
houres 6 and 30 minutes	houres 5 and 40 minutes.
houres 6 and 8 minutes	houres 5 and 51 minutes.
houres 5 and 54 minutes	houres 6 and 6 minutes.
houres 5 and 40 minutes	houres 6 and 20 minutes.
houres 5 and 26 minutes	houres 6 and 34 minutes.

First

A Prognostication.

First quarter the first day 34 min: after 1 in the morning, somewhat by constant.

Full moon the 8 day 8 min: after 1 in the morning stirring the season.

Last quarter the 14 day 39 min: after 5 in the afternoon, reasonable temperate.

New moon the 22 day 10 min: after 4 in the afternoon, some fall of moisture.

First quarter the 30 day 27 min: after 5 in the afternoon, inclined to raine.

Marches Abstract.

In this moneth the humours of mans body doe begin to increas: and now rolle feeding breedeth grosse and grosse humours, and therefore ble moares of digestion, and such as breed good tynes: it is a good time to purge and clarify the blood by potions, bleedings and bloodletting of such other waies as the learned Physician shall appoynt, and as the cause of the disease shall require, now also sweete meates and drinkes comfortable.

The tyme of grafting as yet endureth, to yether setting, sowing, propping, and plashing of vines, willow, oates, field pease, onions, parsnips, and like.

Of April.

Day.	The Sunne riseth.	The Sunne setteth.
1	houres 5 and 18 minutes	houres 6 and 42 minutes
7	houres 5 and 6 minutes	houres 6 and 54 minutes
14	houres 4 and 54 minutes	houres 7 and 6 minutes
21	houres 4 and 39 minutes	houres 7 and 21 minutes
28	houres 4 and 29 minutes	houres 7 and 31 minutes

Full moon the 6 day 44 min: after 10 in the afternoon, somewhat windy.

Last quarter the 13 day 8 min: after 6 in the morning, stormy and vncertaine.

Sett moone the 21 day 56 min: after 3 in the mo:ng, windy and cloudy.

first quarter the 30 day 32 min: after 4 in the mo:ng, subject to winde.

Aprils Abstract.

In this moneth of Aprill, the pores of mans body is opened, and apt to receiue physicke: and they that vse the same, I commit them to the benefit of nature in all tymes of the yeare, this is the best time to prevent causes of sicknesses, or for speedy remedie in extremities, for now nature doth renew strength through all the body: So where sickness happeneth, is soon vnburdeneth by the meanes of Physicke: wherfoze what it cannot doe now, it will hardly be hereafter, therfoze take tyme now whilst time is.

As yet you may graft and yioine vines, and also set Melons, Cowcumbers, Citrons, Martichokes, and be by hopps, sow Barly, Tanners apply themselves to barking of Trees, &c.

Of May.

<p>The Sun riseth.</p> <p>houres 4 and 23 min:</p> <p>houres 4 and 15 min:</p> <p>houres 4 and 5 min:</p> <p>houres 5 and 56 min:</p> <p>houres 5 and 50 min:</p>	<p>The Sun setteth.</p> <p>houres 7 and 37 minuts</p> <p>houres 7 and 45 minuts.</p> <p>houres 7 and 55 minuts.</p> <p>houres 8 and 4 minuts.</p> <p>houres 8 and 10 minuts.</p>
---	--

full Moone the 5 day 46 min: after 6 of the clocke at night, some showers.

last quarter the 19 day 36 min: after 8 at night, fine weather;

Sett Moone the 21 day 52 min: before 1 in the morning, apt for the time.

first quarter the 28 day 9 min: after high noon, clearing clouds.

A Prognostication.

Mayes Abstract.

In this moneth rise early, for May doth not
any sluggards, and let such as be in health and
wake into the field, and to eate and drinke betimes
good and wholesome, abstayne from all meates that
of a hot nature, and such as bee sicke, it is bett
time of the yere to be let blood or take physicke.
as be whole, God keepe them in health, and such as
sicke, God send them good physicians and physick.

The tyme is now sitting to sow Bazill, marigolds
and such fine seedes, as befoze might not be sowe,
cause of the coldnesse of the weather, let Sage
ding to the proverbe, let Sage in May, and it
last alway, sow flaxe and hempe, let hartichokes,
pour Hoppes and Gardens, let to pour grafts
superfluous branches trouble them: May dew,
mary flowers, and Beane flowers, may at your
sure be distilled this moneth, and now also have
of watching your Bees.

Of Iune

Day	The Sunne riseth.	The Sunne setteth.
1	hours 3 and 49 minutes	hours 8 and 11 minutes
7	hours 3 and 46 minutes	hours 8 and 14 minutes
14	hours 3 and 47 minutes	hours 8 and 13 minutes
21	hours 3 and 49 minutes	hours 8 and 11 minutes
28	hours 3 and 52 minutes	hours 8 and 8 minutes

Full mone the 4 day about 3 of the clocke in the
ning, faire weather.

Last quarter the 11 day 30 after high noon,
heate drops.

New Mone the 19 day 16 minutes after 1
clock in the afternoon, inclined to rayne.

First quarter the 26 day 14 min: after 7 of the day
at night, somewhat windy.

Neue. 1631.

Iunes Abstract.

In this Moneth, if thou must needes vse Physicke,
 take it in the morning early, that it may haue wrought
 before the heate of the day, and vse a light and thin diet,
 for the stomacke is not so able to digest as in winter, or
 any other of the former moneths, it is very good and
 convenient for some to drinke clarified whey boyled
 with cold hearbs, & to abstayne from violent exercise.
 Distilling of Roses, making of Sirrups, and Con-
 serves are now in prime, now gather such hearbs as
 you meane to keepe all the yeare, but bee sure you dry
 them in the shade, good husbands and huswines are
 now sowing their Corne and Gardens, and other
 sowing their sheepe, the time serues to set Rosemary,
 Gilliflowers, take hede of cutting either hedge, or
 hedges, with knife, but rather gather them
 with your fingers, now you may set Saffron, carry
 Compost, make Hay, rid Gardens of Snailles,
 and, or Dismissers.

Of Iuly.

The Sunne riseth.

houres 3 and 54 minu.
 houres 3 and 59 minu.
 houres 4 and 7 minu.
 houres 4 and 20 minu.
 houres 4 and 30 minu.

The Sunne setteth.

houres 8 and 6 minutes.
 houres 8 and 1 minutes.
 houres 7 and 53 minutes.
 houres 7 and 40 minutes.
 houres 7 and 30 minutes.

Full moone the 3 day 5: min: after 11 of the clocke
 the forenoone, pleasant weather.

First quarter the 11 day 37 min: after 5 of the clocke
 the morning, inclined to windy.

Second moone the 19 day 6 minutes before 1 of the
 in the morning, southerly hot.

Third quarter the 25 day 34 min: after 9 of the clocke
 night, inclined to overcasting clouds.

A Prognostication.

Iulies Abstract.

In this Moneth vse cold hearbs, and cold meates abstayne from phyplicke, and now the Rivers are more wholesome then the Bathes, let the Sun be by when you walke abroad. In the time of any plague or pestilence keepe your Chamber window shut, opening when the Sun hath force of shining, and be sure perfume your Chambers every evening with Cinke put on a Chafindish of coales, then which nothing better, and let them vse Cadus Benedictus boyled and drunke fasting. May harvest, now collecth flackebands to worke, and such as haue leasure, it is good to follow for wheate, and to carry out soyle, and to gather seedes and flowers to keepe all the yeare, and dry them in the shade till they be almost dry, and then dry them a while in the Sun, and in like manner dry your hearbs.

Of August.

Day	The Sunne riseth.	The Sunne setteth.
1	houres 4 and 36 minuts	houres 7 and 24 minuts
7	houres 4 and 48 minuts	houres 7 and 12 minuts
14	houres 5 and 0 minuts	houres 7 and 0 minuts
21	houres 5 and 16 minuts	houres 6 and 44 minuts
28	houres 5 and 27 minuts	houres 6 and 33 minuts

Full Moone the 7 day 12 min : after 10 at night sayre and pleasant.

Last quarter the 9 day 3 min : after 11 at night ouercasting clouds.

New Moone the 17 day 5 min : after 11 in the morn.

First quarter the 24 day 50 minutes after 11 in the morning, reasonable temperate.

Full moone the 31 day 43 min : after high water forayne showergs.

Augusts Abstract.

In August moderate dyet is good Physicke, for now it is very dangerous to surfeit, and to take heede of heates and of colds, for nothing sooner ingendereth Plurisies. And vse not to sleepe much, and especially afterneene, for making oppilations, and for aboyding of Agues, and the headach, and catharres. And let a man now abstayne from Physicke, except great necessitie doe compell. Now Lady Ceres lookes to haue men enough to attend her. They that would haue good seeds for their Gardens the next yeare, must now gather of their owne, least in buying they loose their money and labour. And such as desire to haue lettice or other herbes for winter, may sow seeds in the increase of the Moone. Of September.

Day	The Sunne riseth.	The Sun setteth.
1	houres 5 and 34 minuts	houres 6 and 26 minuts
7	houres 5 and 46 minuts	houres 6 and 14 minuts
14	houres 6 and 2 minuts	houres 5 and 58 minuts
21	houres 6 and 14 minuts	houres 5 and 46 minuts
28	houres 6 and 28 minuts	houres 5 and 32 minuts

Last quarter the 8 day 18 minutes after 4 in the afternoone, some fall of moisture.

New moone 15 day 20 min: after 8 of the clocke at night, somewhat cloudy.

First quarter the 22 day 30 min: after 10 in the forenoone, indifferent weather.

Full moone the 30 day 38 min: after 4 in the morning, apt for the season.

Septembers Abstract.

In this Moneth, such as haue neede may safely take Physicke, and also may Bath and Blade in this Moneth, all things are in their proper nature & vertue, and such fruits as are ripe and not intected, are good to cate for such as haue good stomackes. The

A Prognostication.

time is good to make conserue of Barberies, & Quinces, winter hearbs must be now sowne, likewise is the time to set hartichoakes, rose trees, apple trees, pear trees, wardens, strawberies, violets, gilliflowers, & pinks to be gathered at the full of the Moone: Sow parsnips, and in dry weather gather your peppes, good Husbandry is sowing Rye and wheate, good husbandrie is making of beruys, and plucking of hempe.

Of October.

Day	The Sunne riseth.	The Sunne setteth.
1	houres 6 and 34 minuts	houres 5 and 16 minuts
7	houres 6 and 46 minuts	houres 5 and 14 minuts
14	houres 7 and 0 minuts	houres 4 and 0 minuts
21	houres 7 and 15 minuts	houres 4 and 45 minuts
28	houres 7 and 16 minuts	houres 4 and 34 minuts

Last quarter the 8 day 24 min: after 8 in the morning, overcasting clouds, some fall of raine.

New moone the 15 day 27 min: after 6 in the morning, overcasting clouds.

First quarter the 21 day 2 min: after 10 at night, windy and cold.

Full Moone the 29 day 36 min: after 10 at night, stormy and vnconstant.

Octobers Abstract.

In this month thou maiest take physick, & also best occasion serue, vse hot meates, and drinckes, and good wholesome wines to nourish good blood. And beware of taking cold, because the quartane Ague will be apt to be taken, & such other dangerous diseases. Sow more young trees, as apples, peares, quinces, roses &c. Set pease, parsnips, &c. Good Husbandry maide maulted to sowing of wheate; set Ruts, Acornes, and flberds, and to doing of such good husbandry.

Of November.

Day	The Sunne riseth.	The Sunne riseth.
1	houres 7 and 33 minutes	houres 4 and 37 minutes
2	houres 7 and 42 minutes	houres 4 and 18 minutes
3	houres 7 and 52 minutes	houres 4 and 8 minutes
4	houres 8 and 3 minutes	houres 3 and 57 minutes
5	houres 8 and 9 minutes	houres 3 and 51 minutes

Last quarter the 6 day 42 min: after 10 at night,
windy and stormy.

New Moone the 13 day 2 minutes after 3 in the af-
ternoone, some fall of moisture.

first quarter the 20 day 16 minutes after 1 in the
afternoone, subject to snow or raine.

Full Moone the 28 day 12 min: after 5 at night:
winterly weather.

Nouembers Abstract.

In November finish the phisicke that ye meane to
take, & so rest till March, except some great necessity
doe constrain you, vse good meates & wholesome wine
nourish the blood, provide thee warme cloathing, goe
on thy feet, or else make sure account of Rheume
and paine, besides some other 'inconuenience that will
ensue. Be ware of the hot-house this moneth, and vse
Betony and Cinnamon in drinke.

In the new of ♀ moon you may remove yong trees as
last moneth, and set crab-tree stocks to graft upon
when you please. It is a good time in the wane of the
moon to set pease, beanes, and if the weather be not
hard, it is good sowing of Parsenips, good making
manure, an killing of Bees and swine.

Of December.

Day	The Sunne riseth.	The Sunne riseth.
1	houres 8 and 11 minutes	houres 3 and 48 minutes
2	houres 8 and 14 minutes	houres 3 and 46 minutes
3	houres 8 and 15 minutes	houres 3 and 45 minutes
4	houres 8 and 12 minutes	houres 3 and 48 minutes
5	houres 8 and 7 minutes	houres 3 and 53 minutes

A Prognostication.

Last quarter the 6 day 40 min: after 10 in the
none, sitting the season.

New moone the 13 day 34 min: after 1 in the
ning, cloudy and cold.

First quarter the 20 day 50 min: after 7 in the
ning, seasonable and temperate.

Full moone the 28 day 30 min: after high
some snow or reine.

Decembers Abstract.

In this Month of December, keep thy body and
from cold, and eat such meates as be of a hoat
abstapne from Physicke, and let thy Kitchen be
Apothecary: warme cloathing thy nurse, merry
pany thy keepers: and good hospitality thy exercise.

Remoue trees and bushes as aforesaid in No-
ber, if the weather proue not two extreame. In
wane of the Moone let Beanes, pease, & those
that cannot indure the cold, couer them with straw
other prouision from the frost and snow.

Soli sapienti Deo, sola gloria.

Octab. Mart.	18	19	21	22
Quind. Martin.	25	26	28	29

Note that the Exchequer openeth 8. dayes before any
Terme begins, except Trinitie Terme, before which it openeth
but 4. dayes.

The Law-dayes in the Courts of
the *Archies, Audiance, Prerogative, Consisto-
rie in Pauls, Delegates, Admirall, and High
Commission, as they bee kept in the
Term time.*

In Hilary Terme { S. Hilarie, 13 } of January.
 { S. Wolstan, 19 }
 { Conu: of Paul, 25 }
 { S. Scholast. 10. of february.

In Easter Terme { Quind. Pasch. 25. of Aprill.
 { Inuenc. Crucis, 3 }
 { S. Gordian, 10 } of May.
 { Ascension day, 19 }

In Trinity Terme { Corpus Christi, 9. } of June.
 { S. Barnabie, 11 }
 { S. Iohn Baptist. 24 }

In Michaelmasse Terme — { S. Faith, 6 }
 { S. Edward, 13 } of October.
 { Tres Micha. 19 }
 { Menf. Mich. 27 }
 { Crast. Anim. 3 }
 { Crast. Martin. 11 }
 { Edmund K. 20 } of November.
 { S. Katherine, 25 }

The first day after every of the Feasts, set downe for every Terme, the Court of the Arches is kept in the forenoon in Bow Church: and the Admirall Court the same day in the afternoone in Southwarke. The second day after every of the said Feasts, the Audience Court is kept in the forenoon in the Consistory in Paules, and the Prærogative in the same place in the afternoone. The third day following every of the said feasts, the Bishop of London his Consistorie Court is holden in Paules, in the forenoone, and his Masters Court of Delegates in the same place afternoone. The fourth day following the said Feasts, his Masters Court of High Commission, is kept in the Consistory in Paules, or as of late years at Lambeth, or in the Lord Bishop of London his Pallace on Thursday in the afternoone. But if any of the dayes before recited be Sunday or a Holiday, then is such Court kept the day following. In Hilarie Terme, some of the abovenamed Court dayes, be ordinarily kept, and as many in Easter Terme, and Trinitie: according to the course of the yeare, as the Judge in the Arches in his discretion shall think good, who at the end of every Terme appointeth the Court dayes to be kept in the next Terme. But in Michaelmas Terme, the Court dayes for the same before set downe (if as in the rest, of late dayes they be not altered) were wont certainly to be kept.

Therefore advise all Country men (especially those that dwell farre off) being cited by any originall processe to appear in the Arches, Audience, Prærogative, or Delegates, to send to some Proctor a note of the case, and to what Court they be cited, to appeare for them, and to returne him word of the very day, in which it shall be needfull for them to appear in person. But in the course of practise in the High Commission, and the Admirall Court it is otherwise, for every person cited to those Courts, must appeare personally.

A Prognostication.

The Termes, with the Act, or Commencement dayes, in both the Vniversities.

Hillary Terme beginneth in both, Ianuary the 13. and endeth at Oxford, the 2. of Aprill. At Cambridge, the 6. of Aprill.

Easter Terme begins in both, Aprill the 30. ends at Oxford the 16. of May. At Cambridge, Iuly the 4.

Trinity Terme begins at Oxford, Iune the 8. and ends the 9. of Iuly, but may bee prorogued, *ad Magistrorum beneplacitum.*

Michaelmas Terme in both, begins October the 10. and ends December the 16.

The Act, or Commencement of Bachilors in both, is the first day of Lent, February 23.

The Act of Doctors, and Masters in Oxford, is the 9. of Iuly. In Cambridge, Iuly the 4.

The *Quatuor tempora*, or Ember Fafts.

These feasts were appointed, about the yeare of our Lord, 212. when Deacons, and Ministers are to be ordained.

Post Crux, post Cineres, post Spiritus, atq; Lucie
Mercurij, Veneris, sabbati Ieiunia fiunt.

The	{	Wednesday	}	after	{	1. Sunday in Lent, Feb. 27.
		Friday, and				Whitsunday, May, 29.
		Saturday,				Exalt: Crucis, Septemb. 14.
						S. Lucie, December, 13.

Wood-house. 1623.

The Times of Marriage prohibited.

Coniugium Aduentus tollit : Hilariq; relaxat :
Septuagena vetat : sed Pasche octaua reducit.
Rogamen vetitat : concedit Trina potestas.

No Wedding without
Licence this yeare, from

{	February, 5. untill Aprill, 18.
	May, 15. untill Iune, 6.
	November, 16. untill Ianuary, 13. in the next yeare.

Generall Obseruations, and profitable to be regarded.

Plant, and plant Trees, the Moone being new, and in
Taurus, Virgo, or Capricornus, the wind South, or
West.

Remoue, and set young Trees, from October untill
March, in the first quarter of the Moone, the winde at
South, or West, and the weather warme and dry.

Cut Vines in Ianuary, or February.

Fell great Timber, in December, and Ianuary, in the last
quarter of the Moone is best : but if you would haue it to
grow againe, cut it downe in the new of the Moone.

Cut hedges, betweene the Change of the Moone, and the
full, from the end of Ianuary, untill May.

Shere Sheepe, cut hairens, and sow all manner of Cozne
in the increase of the Moone.

Set and sow all kind of Seeds, the Moone in Aries,
Taurus, Cancer, Virgo, Libra, Capricorn, Aquarius, or Pisces,
but the seeds whose rootes be round, should be sown, or set,
1. or foure dayes, before, or after the full of the Moone.

A Prognostication.

Dung Land, that weeds may not abound, in the last quarter of the Moone.

Geld or lye Cartell, the Moone in Aries, Libra, or Sagittarius, before the full of the Moone; you may let them blood at any time, the Signe not being in the Heart, nor in the place where the incision is made, nor in the day of the Change of the Moone.

Gather Fruit, Hearbes, and Flowers to keepe, after that the Moone is at the full.

Of all fruits (for the most part) Cherries be soonest ripe, but not all at one instant. The reddest be alwayes the ripest, and must be gathered by the stalkes, and handled as little as may be. Lay them as thin as you can, lest by taking heat, they soone lose the gloze of their colour.

Plums, when no part of the fruit cleaves to the stone, be perfectly ripe. If you gather them before they fall downe of themselves, they may be kept long, being spread thin vpon Pettles, or Wine-leaves.

Peares, must be gathered when they haue their full growth which is, when the kernels lye hollow in the coze, and are blacke on the end: to haue them last the longer, lay them one by another vpon a boarded floore, or fleake, made of wande, without straw or fearne.

Apples, being dry gathered, and in the old of the Moone will be best kept, if euery sort be layd by it selfe (without any fallings among them) vpon bare boards, or on a plaister floore, till St. Andrews tide, the thinner they lye the better: let the place be that close in frosty and extreame weather, and not farre from fire, in faire weather the ayre must be let in, but in the day time for feare of Mouldinelle. In frost to couer them thicke ouer, wth fine Hay, or batly chaffe, will not be amisse.

Wardens, will last longest, bring gathered in the Last quarter of the Moone, and layd on dry beezes, without any conering.

Generall Rules of Physicke.

Cut no Veine, nor let Blood, when the Moone is in the place where the incision is to be made, neither when the Sun or Moone are afflicted with the malignant Planets, Saturne or Mars: let it be done in the Morning, after Sun-rising and while the patient is fasting, if in the after-Moone, then after perfect digestion, the ayre being temperate.

In letting of Blood the Physitian or Chyrurgien must be carefull of his Patient, for many times, the careless and unlearned, by letting of blood, openeth a way to dangerous infirmities, and oit to present death. Neither is it convenient that a leane, and weak man or woman, or any one that is fat and grosse, nor for a Child under fourteene yeares of age, to be let blood. It is to be considered, how it standeth with the Patient inwardly, for his Complexion, and age, for the time of the yeare, and of the day. Therefore it is best to let blood, in faire, temperate, and Sun-shine weather.

The best times to let Blood be

for the	{	Sanguine	{	in	Cancer, or Pisces.
		Cholericke		one	Cancer, Scorpio, or Pisces.
		Melancholie		the	Libra, or Aquarius.
		Phlegmatick		day	Aries, or Aquarius.

For the Phrensie, Pestilence, Squinancie, Plurisie, Apoplexie, continuall head ach, hot burning Fever, or any other extreame paine or dangerous discale, remedy must be sought with all convenient speed, but then blood is not to be let in so great quantity, as if a chosen time might be taken.

Every learned Physitian, will consider many Astrological observations necessary in Blood-letting, Purgings, and bathing.

A Prognostication,
Observations of Husbandrie, and Gar-
dening in euery Moneth of the
Yeere.

A Skilfull, and diligent Husbandman will first look to the nature of the ground, that hee is to till, next to the seasons of the yeare, then to the customes, and fashions of the Countrey, and place, which although some men hold as second natures, yet as it is not good for any man to be too precipitate in his owne opinion; so let not any one be too great a slave to other mens traditions, but to stand upon the ground of reason, made good by experience.

Husbandry doth vary according to the nature and Climates of Countries: for as the Earth, the Ayre, the little or much heate, Cold, or Moisture doth increase or diminish, so must a good Husbandman alter his seasons, labours, and instruments. In the fruitfull Vales of this Kingdom, where is stiff clay Land, and in other places of the like nature, all tillage must bee begun, betimes in the yeare, the Plowes, and other implements, large, and strong, and the labour great and painefull. In mixt soyles, that are fruitfull, all arable woorkes, would begin at later seasons, the Plowes, other necessaries, and labours, are to bee somewhat lesse, than the other.

In light sandy grounds, that be fruitfull, their seasons latest, their furnitures, and labour least.

Lastly in barren, and unfruitfull fields, the arable top would have a fit season of the yeare (Annus fructificator, &c.) and the Plowes, and instruments must ever be med according to the nature of the ground.

Wood-house. 1631.

January.

*Fecundos Janus calices, escamq, repentes
Pocis : Et arcenda est corpore segnitias.*

In January cut downe Timber, (and it shall not chinke, nor be eaten with Mozymes) in the last quarter of the Moone. Wet, or sow kernels, and berries, of Bay trees, Prunel and Box. Wet Quicksets, Roletrees, Peachen filbeards and Plums, and if the Frost be not too hard, remove Trees, set Roundshall pease, and Beanes, rid fruit trees of superfluous branches. Lop Trees, and Hedges, mynch, and geld Cattell for reare. Fallow land for Wheat, and Rye. Trench Gardens with dung. The best time to set, sow, remove, prune or lop is before the full of the Moone, but sow Pease and Beanes, and dung Land in the last quarter, Remove Bees, and for your owne health keepe your body warme, let good and wholesome dyet be your Physitian, and rather sooth exercise, and labour, then sauce increase your appetite.

February.

*Februs insequitur post frigida tempora Tani
Ordine crescentes arget & ille dies.*

Now set, and lay Quicksets, set and plant Vines, Osiers and Roletrees. Sow Pease, Vetches, and Beanes kernels, and Mustardseed. Plash Hedges. Cast up Ditches and set Hoppes. Provide now to have sallets in Summer. Sow Dates, in cold and stiff Land. For your health take heed of cold, forbear meates that bee limie, and stegmaticke, and if need require, eyther Surge, Bath, or bleed, as Art shall direct you.

March.

A Prognostication.

March.

*Languet Hiems, redeunt viola, mare navita sulcat,
Rusticus arua, quibus hordia deinde ferat.*

I N the new of the Moone (the wind any part South or West) graft Peare, Twarden and Appletrees, & sow the you left undone the last Moneth. Cover the rootes of your Trees (which you bared before) with ranke earth, after the full of the Moone. Sow Beanes, Pease, Oats, Onions, Parseneps, Carrets, Cocombers, Melons, and all kind of Potherbes. Slip Trichocks and Sage, Sell Lambs, Sow Early Land, and in cold clay Land sow it. Let blend according to your youth, strength, and necessity, the signe, and weather being fit. Whatsoever Disease cannot in the Spring time be cured by Physicke, will hardly be it all the yeare after.

April.

*Arboribus flores, dat pratis gramen Aprilis :
Quid cessas teneras pascere Pastor Oves.*

I N Aprill sow Early, Hymp, and Flaxe, and all kind of seeds left undone the last Moneth. Pole Hops, set Garden hearebes, open your Hives, and give Bees free liberty, leave to succour them with food, and let them labour for their living. Canners now provide them of Berke, and good Huswines looke to your Dayries. Now by the direction of a learned and skillfull Physitian, bleed and purge, and they that have Fches, or be troubled with the Gout, may goe to the Bathes in this Moneth, and the two next.

May.

*Omnia nunc florent, nunc formosissimus annus :
Nil segeti duro frigore pejus erit.*

NOW set, and sow all manner of fine Herbes, and seeds. Let Sows a worke. Take Lambs from their dams, and

Wood-house. 1631.

Land for Wheat, and Rye. Lente lopping of Trees. Teach
Hoy to climbe, but cut off the superfluous branches. Rise
early, and walke in fragrant fields, and by sweet running
Streames. Sage and sweet Butte is now an excellent
breakfast, clarified Whey and Sage Ale a most souveraigne
drinke.

June.

*Iam pecus, & prata est tempus condere, & in astra
Vel medio dura commeminiſſe Hiemis.*

In June, sheare Sheepe, bring home sowell. Weed Cozne,
and Gardens. Set Rosemary, Carnations, and Gilly-
flowers. Sow Lettice and Radish 3. or 4. dayes after the
full, and then they will not run to seed. Make Hay. Carry
Herd, Lime, Marle (and measure of what kind soever to
your Land. Cut neyther Hedge nor Tree, during this and
the next Moneths. Beware of great thirst. Use light,
thin and coole dyet, much exercise, and chaste thoughts.

July.

*Sirius vrit agros; nunc est calidissimus annus,
Cum Sol Herculei terga Leonis edit.*

Now apply your Hay harvest, for a day slackt may be the
losse of many pouds, especially when the Weather is
inconstant. Pull Hempe that is ripe. Gather Garden
Peas. Set Rue, and Sassafraswood, to grow upon sloopes,
to drive away Fleas and Moathes. Gather flowers and lay
them in the shade till they be almost dry, and then Sun them
a little, for feare of corrupting. Use a moderate dyet, and be-
ware of great thirst, for nothing buzgerth the Pestilence, or
pestilent diseases, sooner then extreame thirst, and fervent
heats, and cold taken suddenly upon them. Beware of Phy-
cke, bleed not but upon violent occasions.

August.

A Prognostication.

August.

*Messis adest, spicas gravidas, & mitia poma
Iam lege, & huic Psalmos qui dedit ista Caus.*

Apply your Coine harvest. Sow Winter hearbes in the new of the Moone. Gather garden weeds. Sow Barly and Oates. Gather your Summer greater frutes, as Pears, and Apples, and lastly for your health refraine from sleeping after meat in the day time, shun feasts and banquetts, and let Physicke alone.

September.

*Frugibus hic poma adiungit, tu dum legis illa
Dic, quam me laute tractat amatque Deus?*

In this Moneth, and in the end of the former, when Hops were browne, it is time to gather them, the weather faire and the dew off from the ground. Kill Bees, Make Mermes. Sow wheat, and Rye. Put Swine to mast. Remove and set slips of all sorts of flowers, betwene the two last dayes, and remove trees every new Moone from September untill February the weather faire and warme, the Winter North, or West. Lastly for health vse Physicke but moderately, forbear frutes that are too pleasant, or rotten, and as Death shun Rhot and Surfet.

October.

*Te iubet exulta committere semina terra,
Tempore, quo possim fructificare suo.*

In October sow Wheat, and Rye, the sooner the better for fear of Raine. Sow Peas, and Beans. Gather Winter fruit, the weather being dry in the afternoone, and the old of the Moone. Cut Roletrees if you desire to have store of Roses, but once in two yeares, and for health

Wood-house. 1631.

not any needfull Physicke at the hands of the learned, get warme clothing and goe by shod: Use all moderate sports, for any thing now is good that reuiveth the Spirits.

November.

*Glande sues Pascae, sub Brumam digna requira
Suauius atque assis, vescitor anseribus.*

This is the best time to make Malt, to kill Hogs, to trench Gardens with dung, to set Cræweeetocks. Sow Wheat, or Rye in exceeding hot soyles Cut downe Timber for Plowes, Carps, and other winter bandy imployment. Use whole some meates, well spiced and digest, or the sweet Wine, and for digestion befoze all things prefer good, and moderate exercise.

December.

*Bruma venit nimbosa, iubens agere otia agreſſes,
Atq; his quæ æſtius parte labore frui.*

In this, and the next Moneth, cut downe great Timber, in the last quarter of the Moone Uncover the rootes of fruit trees. Set Beanes and Pease. Cover all your best flowers, and herbes from frosts, and stozmes, with rotten old horse-litter. Looke well to Cattell. Take fowles with Nets, and Lime-twigs. Water and keepe moist your Medders, and to conclude, for our healthfull meates that are good and nourishing: Drinke good wine, keepe thy body well warme, and thy house warme: banish all cares from thy hart, and thy poore Neighbours, respycing that God sent his only begotten Sonne, about this time into the world.

**The principall Fayres of England and
Wales, orderly set forth 3 with the Moneth, Day,
and Place, where they be kept.**

Faires in January.

The Anatomie of Mans Bodie, as the
parts thereof are gouerned by the
twelue Celestiall
Signes.

Aries, Head and Face.

Taurus,
Neck and
Throat.

Cancer,
Stee and
Stomacke.

Virgo,
Bowel
and belly.

Scorpio,
Secrets &
members.

Capricor.
the knees

Gemini,
Armes &
Shoulders

Leo,
Heart and
backe.

Libra,
Reynes
& loynes.

Sagittarius
The
Thighes

Aquarius.
The legs

Pisces, The feete.

The fierie Ramme ruleth Head and Face.
In Necke and Throat the Bull doth challenge place;
The ayrie Twins, they gouerne Armes and Hands,
The Beest and Stomacke Cancer the commands:
The lustie Lion hath the Backe and Heart,
Bowels and Belly is the Virgins parts
In Loynes and Reynes is Libras liberties,
And Scorpio ruleth the Stones and Prinities:
The Thighes and Haunch is Sagittarius song,
And both the Knees to Capricorne belong:
Aquarius makes the Legs much aches feeble,
And Pisces rules the Feet from Toe to Heele.

January hath xxxi. dayes

Marine Speares and Clowthes this month also goes
Take heed of Coughes and letting Blood.

By Job

Printe

White. 1631.

A Prognostication for
this yeare of our Lord God,

1631.

Being the third after the *Bissextile*, or
Leape-yeare.

VVherein is conteyned the state
of the whole Yeare; the disposition of
each Quarter; and the inclinati-
on of the Weather for euery Quar-
ter of the Moone through-
out the whole Yeare.

With the rising and setting of the Planets,
Husbandry Aduertisements, and other
*things fit to be knowne, both plea-
sant and profitable.*

Also, at the end of the Booke, is the whole
Almanacke, conteyned in one Lease, for this
Yeare 1631. which being cut out, is fit to be
placed into a Table-Booke, Booke
of Accompt, or other.

By John White, Well-willer to the Mathematicks.

LONDON,

Printed for the Company of Stationers.

1631.

A briefe and necessarie Computation of the
time compleate within this present yeare, 1631.

Since the Creation of the World to this yeare

Since the Flood

Since the birth of Abraham

Since the destruction of Sodom

Since the Israelites departed out of Egypt

Since the destruction of the City of Troy

Since London was built

Since Yorke was built

Since the building of Rome

Since the last Blasing Starre

Since his Majesties returne from Spaine

Since K. James Coronation in Scotland July 25

Since his coming to London May 17

Since his Majesties proclaiming

*A briefe Declaration of the
Disposition of the foure Quar-
ters of this Year.*

And first of Winter.

*The Winter Quarter best doth prophenate
To all Degrees, and Sexes, their estate.*

Sol in Capricorne, Aquarius, Pisces.

The Winter (and first Astronomickall Quarter) doth
ake beginning when the Sunne hath enter into the
first degree of the Hicshall of earthly Signes Capri-
corne, which was the last yeere 1630. vpon Sunday,
the xi. day of December, and doth continue till Thursday
the x. day of March this present yeere 1631. In which
space of time the Sunne maketh his progression through these
winterly Signes, Capricorne, Aquarius, and Pisces.

The naturall condition and qualitie of this Quarter, is to
be cold and moist (being contrary to the Summer) which cold
moist Element is of the Phlegmaticke Complexion, and
hath the predominatation in the bodies of all sensible Crea-
tures. Now doth the Sea raise Winterers endure many a
storme on the raging Ocean; the billows are high and strong,
raising the billows of the Sea to swell and foam: The floods
are high, the Ayre is cold and piercing, the Dayes are short,
Nights long, and the vigour and strength of every Crea-
ture decayeth. The pores of the earth are now inclosed and
stoppe by the extreme coldnesse of the Ayre: For when get them
in the warmest Regions, Beasts seek for a house, Serpents
hide them to their denues, and the Fishes get into the deepest
of the Waters for their warmth and comfort: For what season
heretofore Spring and comfortable Summer did produce
forth, this Quarter doth destroy and vanish. The more
and more the Winter is, most wholesome for Man & Beast.

A Prognostication.

yet too much cold killeth Plants and Trees in a cold Climate. A moist and warme Winter is an enemy to Nature, but friend to Husbandry, and indifferent Noie of Gods to both parts of the Earth, and preserueth Come. Now for the preservation of our healths, it is fit that we should vse such Meats whose nature are of a hot and drye qualitie, expelling the colde and unwholesome ayre with good Fries, warme Broaches, comfortable Dishes, and strong Wines: And be carefull to keepe the Head and Feet from colde and wet: But yet can they by digest more spesse and strong Meates then in Summer: reason that naturall heate is much (by the coldness of the ayre) into the inward parts of the body, to comforte the Spirits, and to helpe digestion.

The Diseases commonly attending this Quarter, are (or the like) as Palsies, Coughes, Hoises, Colicques, Rheumes, Crampes, Tooth-ach, Catarrhs, Stomachicall Fluxes, &c.

The Second part of the Yeare called the Spring.

*The Spring compared is to Infancy,
To spring and grow in Vertue till we dye.*

Sol in Aries, Taurus, Gemini.

The cheerefull and comfortable Spring becometh bright by the bright eye of Heaven entereth into the first degree of the Vernall and first Equinoctiall Signe Aries, which is on the 21. day being the 21. day of March, and doth continue till the 21. day of June in which time the Sun passeth through these three Signes, Aries, Taurus, Gemini.

The small and naturall condition of this Quarter, is hot and moist, partiticipating of the Sanguine Complexion of the Earth: Now are the dayes and nightes of an equall length, and the splendour of the Sunne shines to fumes to fumes upon the newly renowated Earth, causing it to produce all kind of fruites to our Veners. This of all the Quarters of the yeare is the most pleasant and wholesome, it being the most comely and fruitful.

to remove Diseases of a long continuance, and to prevent
 those which are like to ensue. Now doe the Birds of the ayre
 multiply and breed; Beasts of the Earth increase, and the Fishes
 of the Sea breed multiply in abundance, forsaking the deeper
 parts in more shallow places: And now the Earth bringeth
 forth all sorts of Flowers, Herbes, Fruits and Plants, for
 the needfull use of Man and Beast. The Spring over-
 growseth all sides, causing Fruits to be scarce and rotten: It
 affecting in the preservation of our healths, that wee now vie
 with Nature as wee of a colde and drie quality: and let your
 drinks bee more coole and small then in Winter: It is now
 the time to Purge, Blee, Bleede, and Sweat, if need
 require.

The usuall Sickneses of this Quarter, are Small-poxes,
 Measles, Scabs, Itches in the face, Agues, Rashes, &c.

Of the third part of the Yeare, called Summer.

*Like Man in his chiefe state and lusty yeares,
 The ripening Summer Quarter best appears.*

Sol in Cancer, Leo, Virgo.

Summer Quarter beghineth when the ripening Sun entereth
 into the first and highest degree of the Cancer Tropique
 which is upon Sunday being the 21. day of June, and
 continues till Tuesday, being the 23. day of September, in
 which time hee maketh his progression through these three Sol-
 l Signes, Cancer, Leo, Virgo.

This Quarter of his proper nature is hot and dry, particu-
 larly of the Cholericke Complexion. Now is the Sunne at
 the highest, causing the dayes to be at the longest, and the nightes
 the shortest. Heat is now at the highest, colds at the lowest,
 the most quiet, and the Winds most calmest: And now
 the fruitful Earth cloathed in her richest embroidery, im-
 parts her store to all sensible Creatures for their use and com-
 fort. Flowers are in their beauty, and Fruits in their perfec-
 tion.

A Prognostication.

die: and the painefull Bees gathereth their Honey for their future sustenance: Now naturall heate is dispersed abroad into the outward parts of the Body, and Man is not so hotte with as in Winter, neither can hee digest such grosse and strong Meates, as then; yet the most small and coole Drinks are most convenient for our healths, and little store of Meate doeth best suffice Nature, and those which are boyled are most wholesome, and vse such things as are of a cold and moist qualitie: An over-wet Summer collecteth Fruite, and increaseth Caine.

The ordinary Infirmities of this Quarter, are Fevers, Silences, Jaundies, Agues, paine in the Head and Bils, &c.

Of the fourth part of the Yeere, called Autumne or Haruest.

*As Autumne steales the sappe from Tree and Flower
So Death comes creeping neerer eury houre.*

Sol in Libra, Scorpio, Sagitari.

Autumne, commonly called the Fall of the Leaf, doth begin on Tuesday the xiii. of September, when the Sun doth enter into the first degree of the second Equinoctial Signe, Libra, and doeth continue till Sunday being the xi. day of October: In which time the Sun passeth through these three turnall Signes, Libra, Scorpio, Sagitari.

The usual qualitie of this Quarter is to be cold and dry, which the greatest part of the Melancholy Complexion. The dayes are now againe equally ballanced with the night, the Staffe is mowed, Caine reaped, Fruites gathered, and the painefull husbandman reapeth the profite of compassed labours: Now doeth the Earth lose the heat of her former glorie, Flowers fade, Leaves doe fall, Fruits increaseth, and all Creatures loose their summer strength and vigour, and the most part of sensible Creatures seeketh shelter against the storme ensuing Winter: Of all other Quarters of the yeare this is the most wholesome, breeding

White. 1631.

others thrive in our bodies: therefore beware of the morning
morning cold, and use such things as are of a hot and moist
nature: It is now a time (if need require) to Dye, Wash, and
dye: An Aurne our wet putrified Grapes, making bad
ages, and scarcity of Fruits.

The Diseases common in attending this Quarter are many,
as the like, the Stone, paine in the Backe and Kidneys,
Eyes, Melancholy, Falling Sickness, Agues, Fluxes of
Blood, Fistulas, Spleene, Curres, &c.

The Rising and Setting of the Pla-
nets, with the disposition of the Weather,
for every Quarter of the Moone for
this Yeare, 1631.

January.

Sunne is past the South at Sunset.

Venus is neere the South at Sunne rising.

Mars. & Venus goe to bed tog.ther a little after Sunset.

First Quarter on Sunday the xx. day, 46. min. after xii. of the clocke at noone, wet.

Full Moone on Tuesday the xxix. day, 42. min. past iii. the clocke afternoone, windy.

December.

Saturne and ♀ Venus are in the West at Sunne setting.

Jupiter is South at Sun rising.

Mars is Southeast Sunne set.

Mercuri setteth with the Sunne.

Last Quarter on Tuesday the vi. day, 10. min. after ix. of the clocke in the morning, frost.

New Moone on Monday the xii. day, 24. min. after midnight, faire.

First Quarter on Tuesday the xx. day, 20. min. past vi. the clocke in the morning, sayre.

Full Moone on Wednesday the xxviii. day 20. min. after 12. of the clocke at noone, cloudy.

Of

Of two Ecclipses of the Moone, that
happeneth this yeere 1631.

The first Eclipse of the Moone doth happen upon **Th**ursday the 5. of May: And is to bee seene (if cloudes hinder not) of vs the Inhabitants of Great Britaine, Ireland, and other parts of Europe. The time that she first beginneth to lose her borrowed light, is at five of the clocke and 30. minutes. The middle at 7. and 14. minutes: And the end at ix. of the clocke and thre minutes, and then she recovereth her light againe.

The second Eclipse of the Moone is upon **Tuesday**, the 21. of October. The beginning will be 52. minutes after the clocke at night: The middle at 11. of the clocke: And the end at one and 9. minutes after midnight. This Eclipse will likewise be seene vnto vs, if the cloudes hinder not.

The Times of Mariage prohibited by our
Church.

From Advent Sunday (being the 27. of November 1631) till 8. dayes after Twelfe day, being the 13. of January.
From Septuagesima Sunday (being the vi. day of February) till Low Sunday, being the 17 day of April.
From Monday before the Ascension (being the 16. of May) till Trinitie Sunday, being the fift day of June.

The Charles. 1625 March 27 after which, waiting 7 years.

A Prognostication.

The explanation of the former Table.

Note that every King began his raigne, the same time the next precedent King ended his.

If you desire to know how long it is since the beginning of the raigne of any King, looke how long it is since the ending of the precedent King, and there you shall finde your request.

As for example: If you would know when King Henry the 6. began his raigne, how long he raigned, and also how long it is since his raigne: find out first his name amongst the names of the Kings, and searching the row towards the right hand, you shall finde he began his raigne in the yeare 1509 the 22 of April, and under the title of the time that he raigned, is 37 yeares, 10 months, and 1 day: And looking forward in the same row, where is 122 yeares, April 22 under the title of since their raigne, and so long it is since he dyed.

How to iudge what Weather will follow,
by the rising and setting of the Sunne.

The Sunne rising bright and cleare, signifieth a pleasant day. If he rise fiery red, it promiseth raine: If in his rising he be thickly overcast with a cloud, it betokeneth foule weather: If the Sun be hid the clouds before him into the West, it signifieth fair weather: If at his rising there appeare a circle about him, it signifieth a gay equally, it betokeneth faire weather. Also, if he seeme red, it signifieth faire weather: If at his setting he be of divers colours, or clouds like water, it threatneth raine. If at the rising of the Sun, his beames seeme red, or long, or compassed with clouds, it signifieth great windes: If at his setting there appeare thicke mist, or if it raineth in the evening, it threatneth very foul weather to follow. Also, if the Sunne beames be spotted or greene, pale, or blacke, gathered to a cloud, it signifieth raine. The Sun setting cleare without any cloud, signifieth a faire night ensue. If the circle, or circles about the Sun be cleare, or of no continuance, looke for faire weather: If there be many circles, it signifieth windes: the rounder they are, the more vehement winds. If the circles are here and there broken, and are thicke and blacke, looke for cold wind or snow: Or, if he settle behinde a great cloud, raine followeth.

How

How weather is foreknowne by the Moone.

If the Moone in the third Day of her change, or thur is also before
 her full, or in the midst of the quarter, be round of pure light, no-
 ting encompassing her, the eies direct up, she signifieth sayes
 weather: but bent to red color, promoketh winds. The Moone pale,
 somewhat blacke or thicke, thus signeth rain. When the Moone
 five dayes older, marke the tips of her hornes, if they be blunt, it
 signifieth raine: if sharpe pointed and picking upwards, great
 winds. If in the fourth Day after her change, she haue a red circle
 about her, it signifieth winds and raine.

Of the iudgement of the weather by the Stars.

If the Starres appeare of much light and seeme to be of more
 brightnes & blazing then ordinary, it betokeneth great windes &
 tempest in that part where they seeme to: and in winter, great
 coldes. When diuine Starres appeare with long fiery tayles, it
 betokeneth winds, and great drought: the more in number, the grea-
 ter will be the effect. Also, when Starres seeme to shoot or fall, it
 signifieth great winds in that place: If they seeme to shoot in diuers
 places, it signifieth diuers winds: If in all places, winds, thunder,
 lightning, and most tempestuous weather.

Short Instruction, and very necessarie to know
 the times and seasons when to Sow, and replant
 all manner of Seedes for the Garden.

Sow Cabbages in February, March, or April, in the decline of
 the Moone: and replant them in the Decrease.

Sow Cabbag. Lettuce in February, March, or July, in the
 full of the Moone.

Sow Onions and Leekes, in February or March, at the decline of
 the Moone.

Sow Beets in February or March, at a full Moone.

Sow

Sow Coleworts white & green, in the middle of August or September: Plant the young ones in October, and let them stand in November.

Sow Parsneps in February, April, or June, in a saye day.

Sow Radish in February, April, or June, in the increase of the Moone.

Sow Pumpions, Cucumbers, Melons, and Gourdes, in February, March, or June, in a hotte and saye day.

Sow Spinage in February or March, in the old of the Moone.

Sow Parsley, Fenell, and Annis seeds, in February or March, at the full of the Moone.

Sow white Cicory in February, March, July, or August, in the Moont.

Sow Cardus-benedictus in February, March, or May, when the Moone is old.

Sow Basil in March, in an old Moone.

Sow Purslaine in February, or March, in the increase of the Moone.

Sow Pargraim, Closets, Lime, Flower-gentle, Rosemary, Lavender, in February, March, or April, at the increase of the Moone.

Sow Garden-crises, and Rocket, in February, at the increase of the Moone.

Sow Scull in February or March, at a new Moone.

Sow Copiamer, and Boyage, in February or March, when the Moones increase.

Sow Harts-horne, and Samphire, in February, March, or April, at an old Moone.

Sow Gillsflowers, Hearts-ease, and Wall-flowers, in February, or April, in an old Moone.

Sow Cardus, and Artichokes, in March or April, when the Moone is old.

Sow Chick-wets, in February or March, at the full of the Moone.

Sow Burnet in February or March, at an old Moone.

Sow Hysop and Saxtery in March, when the Moone is old.

Sow double Marigolds in February or March, at the full of the Moone.

Sow Locket-seede, Spargers, and Sperage, in February, at an old Moone.

How White Poppy, and Balsam Christi in February or March,
at the increase of the Moone.

How all manner of Colours the Moone increasing, he being in
Cancer, Libra, or Aquarius.

Set or sow all kind of Seeds the Moone in Aries, Taurus, Can-
cer, Virgo, Libra, Capricorne, Aquarius, or Pisces: but those
Seeds whose Rootes are round, should be sowne three or
four dayes before, or after the full Moone.

*Certaine and short Rules, for the comforting of the
chiefe officall Members of the Body of Man.*

Things which are good to comfort the Head.

Lignum-Aloes, Mariorum, Galingale, Muske, Rosemary,
Roses, Cammameil, Rue, Frankincense, Nutmegs, Hyssop,
Balaie, Spins, Spike, and Claven.

Things good for the Eyes.

Fennell, Cereus, Cloves, Cold water, Celadine, Eyebright, Ra-
ies, and Ictimony.

Things good for the Stomacke.

Nutmegs, Cloves, Calgaurum, Copall, Saffron, Cinices,
Chamwood, Dillanum, Agrimony, Functory, Marliche,
Ugma-Aloes, Spodlium, and Coriander prepared.

Things good for the Heart.

Saffron, Cloves, Cinamon, Mace, Nutmegs, Mariorum, Bur-
rage, Buglosse, Rosemary, Pirabolanes, Pearles, Lignum-
Aloes, Copall, Muske, and Seruill.

Things good for the Luer.

Marwort, Gerai-Ravens, Aloymethode, Agrimony, Saffron,
Cloves, Cardus, Closter, Fennell, Plantain, Dragons, Rose-
water, Lettuce, Violets, Sanders.

Things good for the Lungs.

Walke, Raisins, Almonds, Dates, Lungwort, Hyssopaire,
Lungwort, Citronpane, Distaces, and Penicks.

A Prognostication.

Things hurtfull for the Body.

Meates hurtfull to the Teeth.

Nittres, Meates very hot. Warme drinke, Sweete meates and drinke, Radish rootes, Hard meates, Bitter meates, Whets, much Cloamting, Leekes, Fatte of Fish, Colicosts, & Linnons.

Things hurtfull to the Eyes.

Garlicks, Duions, Radish, Dunkermesse, Letherie, Sweete and thicke Mince, Salt meates, Coleworts, all Pulle, Must, Oile, Durt, Wormes, Fire, and standing presently after supper.

Rules of Mensuration.

A Fingers breadth is foure Barly cornes in thickness; and an Inch three Barly cornes in length: A hand's breadth foure fingers: A span is three hands breadth: A foot is foure hands breadth: A Geometricalle Pale is six foot: an English Search is six foot: A Furlong is a hundred, & thirtie five paces, or six hundred, twenty and five foot: An English Furlong is six hundred and thirtie five foot, or a hundred thirtie two paces: A League is a thousand and five hundred paces: An Italian Mile is a thousand paces, or six Furlongs: A common German Mile is thirty two Furlongs: An English Mile is eight Furlongs: An Acre is forty Pearches length, and foure in breadth.

A short Instruction for the Table following.

Note that the first Colunne of Row, containeth the Names number of Shires, the second of Cities, the third of Bishopricks, the fourth of Castles, &c. Now goe strait in a Row, and you shall easily finde the number Alphabetically, as well in the English as for the Welsh shires: As for example, Bucking-hamshire hath no City, no Bishopricks, 12. Market Townes, no Castles, 185. Parishes, &c.

A Catalogue of all the Shires, Cities, Bishop-
rickes, Market-Townes, Castles, Parishes,
Rivers, Bridges, Chases, Forrests, and Parkes,
conteyned in euery particular Shire
in the Kingdome of England.

12	9	36	18
13	10	24	17
14	11	12	16
15	12	0	15

The vse of this Table.

Enter the age of the Moone in the Almanack, then look the
same in this Table, which you shall find either in the increas-
ing or decreasing. And then in the middle Column you shall
know further labour find the time of her shining. As for ex-
ample: Upon the 30 day of January, I found
how many Howers and Minutes the Moone shined: I
in the Kalender it is Gods Moone the 22 day, then reckoning
thence to the 30 day, I find she is 9 daies old: Then entering
this Table, it sheweth, she shined 7 howers and 12 minutes:
which is the time when she is 21 daies old, &c.

A P rognostication.

The explanation of a new and easie Kalender here following, for this present Yeare, 1631.

NOte that every Moone contriyneth three colours or humours, (the figures for the number of Dayes excepted) first Colours colourd the left hand containeth the Weekes and Sunday Letter. The second, the Signe wherein the Moone is every day. And the third, the Changes and Quarters of Moone. Note that the being there O figures doth signify into Moone; and placed this way is the first Quarter:  the Full Moone;  the last Quarter. Also, that the figures over the head of the Moones, doe shew the houre of her Changes; and the Letters underneath, shew whether noon, or after midnight, N. standing for after noon, Midnight, and M. for after Midnight till Noone.

As for example, Against the 3 day of January, being the day, I doe finde the Moone in  Leo, and is thus figured,  which is Full Moone at 4. of the clocke in the Morning.

Again, on the first day of March, being Tuesday, I finde the Moone in  Gemini, and is thus figured,  which is the first Quarter, at 2. of the clocke in the Morning.

Note also, that at the head of every Moone is placed the Rising and Setting of the Sunne for the middle of every Moone; for example, for the midst of January the  Sun riseth at the clocke, and 40 minutes; and setteth at 4. of the clocke 20 minutes.

It also contriyneth (in Each Ach. one of the letters) for every month, the Days, hours, and Minutes. Each Moone is numbered, with the beginning and ending of every day. The first day is on the 20 day of April, the last day is on the 29 day of May. The first day is on the 29 of January, and the last day is on the 13 of February.

brieft and easie Kalender for this Yeere

1631. which being cut out, is fit to be placed
into any Booke of Accompt, Table-book, or
 other, conveying the whole Almanacke, in
 a short method. By *John White.*

Ranger. 1631.

A New Almanacke, and
Prognostication for the
yeare of our Lord

1631.

532.2

Being from the Worlds creation 1680
and the third after Leape Year.

Calculated and properly referred to the
Meridian of the honourable Citie of York
where the Pole is rayled above the Hor. of
54. degrees: 31. minutes. And whose Lon-
gitude is reckoned 22. degrees, 26. minutes.
so that it may well serue for all Eclipses, and
Aspects for the Honourable City of London,
without any sensible error.

Ranger. 1631.

A Prognostication for the
yeare of our Redempti-
on. 1631.

Being the Third after Bissextile
or Leape yeare.

Wherein is set downe diuers nores
and obseruations, both *Physicall*, *Ci-
uill*, and *Astronomicall*. Whereunto
are annexed many compendious tables,
fit for sundry occasions, and sorts
of men, which the Ingenious may
vse to their pleasure and
profit.

By Phillip Ranger Gent: and
alouer of the Arts *Ma-
thematicall*.

Deus operatur omnia in Omnibus.

Printed at London for the Com-
pany of Stationers, 1631.

*Astronomick calculations for this pre-
sent yeare. 1631.*

THe Prescription of the Equinoctiall is 28 de-
grees 2 minutes.

The greatest obliquity of the Zodiacke is accor-
ding to the Prutenicks 23 de. 28 min. But ac-
cording to *Tycho Brahe*, and the reformed ac-
compts 23 de. 31 min. 30 seconds.

The Eccentricity of the sun by the Prutenicks
is 32196, the totall being 100000. or 1 part 56
min. But according to *Tycho Brahe*, it is 3 parts
9 min. the totall being 60.

Note that the Apogeeum of the sun is by the
observation of *Tycho Brahe*, and our late Astron-
omers in 6 de. 2 min. 14 sec. of Cancer.

Saturne is retrograde from the 16 of Febr-
ary till the 6 day of Iuly.

Iupiter is retrograde from the 27 of Iuly, till
the 23 of Nouember.

Mars is direct all the yeare vntill the 19
December, and then beginneth to goe backe.

Venus is direct till the 8 of Nouember, and
is retrograde till the 8 of December.

Mercury is retrograde from the 23 of Iune
till the 26 of the same: and from the 19
Iune till the 12 of Iuly: and from the 13 of Oc-
tober till the 3 of Nouember.

ther Court dayes obserued, and kept: And
some of these are such Law dayes as are accusto-
mably kept, and used in these Courts. An. 1631.

*A Description of the Foure Quarters of the
yeare, with a description of the time*

Of Winter.

The Winter Astronomicall of this year,
1631. according to Tycho Brahe, beganne
the 11 day of December 35 min. past the after
none, at which tyme the Sunne entered the first
min. of Capricorne. 1630. having the greatest
declination southward, viz. 23 deg. 21 min. 34
seconds: Continuing so to the shortest day, and
longest night. The day being then at Yorke
hou. 58 min. and the night 17 hou. 2 min. that is
36 min. shorter then at London. And this quar-
ter continueth so long as the Sun is passing
rough Capricorne, Aquarius, and Pisces, till
the 10 day of March following.

This winter season is naturall cold, more
and uncomfortable, and dangerous to travell
both by sea and land: more troublesome to
persons then to young, by reason the thick
of youthfull blood doth mitigate, and temper
malignity of cold humours, whereas the
mistresse of age doth yeeld to them.

The diseases incident this quarter are
of all sorts: all kind of Coughs, Colicues,
other Aches, ingendered by crumpe, the
distilling along the body, Stitches in the side,
backe, Dropsies, Scorbuts, & Consumptions.

Ranger, 1631.

Of the Spring.

The Sun, the most glorious eye of the world and comforter of nature, having made his revolution through the Zodiack, beginneth his taske againe on the 10 day of March, a little before 6 at night, as Tycho Brahe saith. At which time the dayes and nights are of equall length through the world: The Sun being mounted above our Horizon 35 deg. 25 min. And this quarter continueth so long whilst the Sunne passeth through Aries, Taurus, and Gemini, even till the 11 of June.

This season doth revive, and quicken the spirits of men, and all other vegetative creatures, which before were dulled by the uncomfortable, and disastrous foregoing winter: Now the earth begins to adorne her selfe in the gorgeous attyre of name Flora; now all creatures reioyce, and multiplyeth: And the blessing of God for the preservation, and comfort of mans life appeareth.

The sicknesses like to raine this quarter are small Pore, Measels, Iquinnaces, hot Feavers, Meagrimas, paine in the eyes, and diseases about the bowell of the backe, and loynes; with other maladies proceeding from corruption of blood, which now beginnes to abound: therefore now is the best time to be let blood, & purge noxious humors, which are causes of all bodily diseases.

A Prognostication.

But looke you take counsell of the learned, and
play not hand ouer head, and cry Had I wist, for
dealing with Doggerles, whose wheate is
more dangerous many times then the disease,
Of the Summer.

Now bright shining Phœbus is approached
nearest to our Zenith, and is at his further
declination Northward, being mounted above
our Horizon 58 deg. 55 min. making the lon-
gest day 17 hou. 2. min. and the shortest night
6 hou. 58 min. The Sun doth enter into the first
min. of Cancer on the 11 day of Iune, here 10 at
night. And this quarter continueth untill the 12
day of September, whillett the Sunne doth pass
through Cancer, Leo, Virgo.

This season bringeth with it much heate, and
drought, bringeth the fruits of the earth to matu-
rity and ripenesse, & all kind of cattell to fatnesse.
Now Marchants and Mariners undertake long
and dangerous voyages to bring in forraigne com-
modities to enrich their Countrey, and to increase
their owne wealth.

The sicknesses most like to preuaile in men
bodies this quarter are hot Spasmes, and fluxes
linga in the necke, and thorate: payne and swelling
in the bladder, the fundament, and priap paine,
proceeding of hot, thumpe, and sharpe humours,
specially to yong men betwixt xx. and xxx. yeares

of age 6 and 10 is most of cholericke constitution
It is an infirmity to take phisicke, and
(except in case of extremity) and that both the
very good advice of the learned Physician.

Of Autumne.

This quarter concludeth the Astronomick
yeare, and is called Autumne. Beginning
when the Sun doth enter into the first minute of
Libra, which will happen on the 13 day of Sep-
tember, halfe an houre past high none, according
to Tycho; making the day and night of equall
length through the world: And this quarter doth
continue whilst the Sun doth passe through Li-
bra, Scorpio, Sagittarius, even till the 13 day of
December,

This season is naturally cold and dry, the fore-
runner of that oppressing Tyrant winter: And
the beauty of the earth beginneth to fade, and
this our common Granmother the earth resigneth
her rich robes wherewith shee was before by the
gentle of the Spring immantled, laying them
in the rich wardrope of nature to resume them
again when the violence of winter is passed.

The bodily diseases whereunto mans frailty
is subject this quarter are more then many, and
almost all that can be named. But the chiefest are
coughs of the breast and Lungs, Collicies,
joint aches, and generall all diseases proceeding
of

A Prognostication.

of groſſe Melancholy humours, & tough ſtream,
incident ſpecially to perſons above 50 yeares
age: from which, and all other deſeaſes, eſpecially
all the ſpeckled Leproſie of the ſoule, Good Lord
deliuer vs.

Ranger. 1631.

The Sun wheeleth about 1094300 myles in 8
houres.

These things are thought incredible to many,
in whose sake only they are set down to informe
their understanding, and to reforme their iudge-
ments.

The heavens declare the glory of God, & the
firmament sheweth his handy worke. Psal. 19. 1.

Of the Eclipses this present yeare, 1631.

THe Eclipse the Sunne is no other thing the
shadowing of his light from our sight which
cometh to passe by the interposition of the body
of the Moone betwixt the Sunne, and our sight:
which is neuer but at the change of the Moone,
or her coniunction with the Sunne: so that the
Sunne alwaies keepes his proper light, but the
inhabitants of the earth are deprived of enioying
his beames vntill the body of the Moone be remo-
ued from betwixt our sight, and the body of the
Sunne: so that to speake properly, the earth, and
not the Sunne is Eclipsed.

Againe, the Eclipse of the Moone is when the
Earth is so directly opposed betwixt the sun and
the moone, that the bright beames of the sun can-
not shine or reflect on the body of the moone, by
reason that the Earth doth shaddow her: and so
it continueth Eclipsed either totally, or but in
in

A Prognostication,

part, untill she can quite her selfe of the shadow of the earth: And this doth neuer happen but iust at the instant of full Moone.

Now the Eclipses of the Sunne may bee some in some in some countries more, in some lesse, in some not at all. But the Eclipses of the Moone are vniuersall, to all that behold her, in what Country, or Nation soeuer they dwell.

The Inhabitants of this earthly Globe of mortality shall suffer this present yeare 4 Eclipses, 1 of the Sunne, and 3 of the Moone.

The first Eclipse is of the sunne on the 30 day of Aprill, about 9 a clocke in the morning: and though the sunne be aboue the earth, yet because of the great south Latitude of the Moone, it shall not be seene of vs: But about the straights of Magellane, and for sotherne countries it will bee in part obscured to the quantiry of a third part of his body.

The second is an Eclipse of the Moone on the 1 day of May. shee will bee totally darkened to those which dwell in the countreyes lying Eastward, as Ruffia, Parthya, Turkey, East Indyes: her Eclipse will be almost finished when shee riseth with vs in England, and will see some part of her body darkened.

The third Eclipse is of the Sun on the 14 day of October before it be risen: In the East Countries

Ranger. 1 6 3 1.

tries it will conspicuous, as in Persia, Cathay, &c.
 The Fourth Eclipse is of the Moone on the 29
 day of October, playne to be seene in England, a-
 bout a quarter of an houre past 11 at night, shee
 will bee totally darkened almost 2 houres; shee
 beginneth to be Eclipsed 5 2 past 8 at night, shee
 beginneth to bee totally darkened 10 a clocke, it
 will begin to recouer light, about midnight, and
 so will be perfectly discharged of the earths shad-
 ow past 1 after midnight: so from the begin-
 ning to the ending of this Eclipse it will bee 4
 houres 17 min. digites Eclipsed 19

Mars riseth 20 min. past 9 ene. south at 4, 38 min.

Venus is under the suns coniecture.

Mercury riseth after day breake.

Rammshorne south at 8, 20 min. ene.

Seauen starres south at 10, 14 ene. setteth 6, 20 min.

Bulls eye south at 11, 51 min. ene.

Orions right shoulder south 22 m. past midn.

Great dog south at 1, 15 min. in the morning.

Lyons heart south at 4, 37 min: in the morning.

Lyons taile south at 6, 17 min: in the morning.

These starres are set downe for very good purpose, to know the exact houre of the night, as they come soone to the south point every night 4 min: more or lesse: And it is useful, pleasant, profitabl, for gentlemen Schollers, Whithersoever generall for all those who delight in mathematical speculations: for by knowing the starres the tyme of the night cannot be unknowne: And if the tyme be knowne, the starres may be knowne.

*A computation of yeares in most of the
nations of the world.*

The Caldeans not long after the flood, & the Egyptians from the departure of the children of Israel out of Egypt have accompted 365 dayes in the yeare without respect to the odd houres, & min: so that in 1460 (consisting there is no leape yeare) the beginning of their yeare passeth through euery day of the Iulian yeare: and this yeare 1631 is the 2380 yeares of Nabonassers, accompt beginning on Tuesday the xii. of Iuly, & the 1 day of their first moneth Thoth.

And the 1957 yeares of the Macedonians beginneth on the same day.

And the 1080 of the Armenians, begins on the 4 of October being freyday, and the first day of their moneth Sahami.

And the 1001 of the Persians begins on the 10 day of October being munday, and the first of their moneth Pharavardim.

The Ethiopians vnder Prester Iehan beginne their yeare 1347 on the xvi day of August, being munday, and the first day of their moneth Muth.

The Muscouites, and Russians beginne their yeare on the first of September.

The Venetians on the first of March.

The Iewes begin their day at 6 a clocke in the evening,

A Prognostication.

evening, and doe account their years 5391 of the world, to begin on the 4 day of October, and the first day of their moneth, Tisrin.

The Turkes accounting their yeare to consist of 354 dayes 3 houres 48 min: beginne the 1039 yeare of the sight of their Prophet Mahomet to begin on the 4 day of August, the first of their moneth Maharan.

The beyond sea account, as the Gregorian kalender haue the same number of yeares, moneths, dayes, houres and minutes as we haue, save that they begin their yeare 1. dayes before the first of Ianuary, and so obserue all their vniuersall feasts 1. dayes before vs throughout 5 yeares. But for their moueable feasts, which are ruled by the Moone, they keepe sometimes 5 weekes, sometimes 1 weeke before vs: sometimes one the same day with vs. As this present yeare 1631 the Easter day is celebrated the same day with ours: theirs on the 20 day of their April, & our Easter on the 10 of our April.

Note that the Church of England both now and began the yeare till the 23 day of March, bring the feast of the Annunciation.

Note, that when the Dominicall letter is *g* and the Prime number 5. 13. or 19 our Easter day is kept on the 25 of March, which hathaine fallen out aboue 14 time since the conquest, some

Ranger. 1631.

years, but will fall out twice in 20 yeares, viz. In Anno 1638, and 1649. If my calculation falls not. And our Easter day can bee no sooner then the 22 day of March, which falleth out when the Dominicall letter is D. and the Prime 16. not higher in the yeare then on the xxv. of Aprill, being the feast of S. Marke, and this hath happen when the Sunday letter is C. and the Prime 8, as in the yeare 1641 about 10 yeares hence, if God permit, and our Kalender be not altered.

A memorable rule of the course of tyme & the Anticipation of the Equinoctiall.

The best Astronomers doe make 2 kinde of yeares, Sydercal, and Tropicall.

Sydercal, is that space of time in which the sun returneth to that starre from which it is departed: of this there are 2 kinde, Fixed & Moueable.

The Fixed hath relation to the fixed starres, & containeth according to Copernicus, 365 dayes 5 houres 9 minuts 40'' according to Tyco. 765 dayes 6 houres 9 min. 26'' 43'''

The Tropicall yeare is, that space of time wherein the sun goeth from the Equinoctiall, or Solstice poynt, till it retune to the same poynt againe, and is sometimes greater then at other times, some by 32 min: 15.

A Prognostication.

But the middle Tropickall yeares which is the rule and guider of all other yeares, containeth 365 ~~daies~~ 5 houres 48 min: so that we accounting the yeare 365 daies 6 houres, which is 1 min: 51 seconds too much, so that by compt it doeth anticipate one whole day in 134 yeares and about 59 daies.

And in the yeare 1610 it did anticipate 11 daies.

This was the reason why Pope Gregory the 12 did refoꝛme Kalender, and brought it 10 daies backe againe, to the same time it was at the first counsell of Nice, and not to Christs time, by reason of a Canon made in the same Counsell: But the Reformers of the Kalender whom Pope Gregory chose out, doe account the yeare 4 seconds lesse then the truth (but it breeds no sensible error in many yeares:) wherby it commeth to passe that in euery 400 yeares there is 3 leape yeares omitted, and in euery 133 yeares 12 daies 18 houres, or there abouts there is one leape yeare to be omitted.

The reason of all this is very plaine, and easie to be vnderstood, if this same worke would affect them.

Assuredly the longer the Kalenders are suffered vnrefoꝛmed, the more the yeares run out of square, so that if the world should stand so long

Ranger. 1631.

the Kalender not reformed in the yeare 1493
Whosomer day would bee on the shortest day; and
Christmas day on the longest day of the yeare:
But the power to reforme belongeth to the su-
preame powers, when it pleaseth them.

*Ludis, & indulges genio sed labitur atas,
Labitur, & nunquam qua fuit illa redit.*

VVhilst thou dost, sport and play
Time doth passe away,
Doth passe and will not stay,
Nor will returne for aye.

Soli deo omnipotenti sit honor, & gloria.

F I N I S.

A Prognostication.

But the middle Tropickall yeares which is the rule and guider of all other yeares, containeth 365 daies 5 houres 48 min: so that we accounting the yeare 365 daies 6 houres, which is 1 min: 51 seconds too much, so that by compt it doeth anticipate one whole day in 134 yeares and about 59 daies.

And in the yeare 1610 it did anticipate 11 daies.

This was the reason why Pope Gregory the 13 did reforme Kalender, and brought it 10 daies backe againe, to the same time it was at the first councill of Nice, and not to Christs time, by reason of a Canon made in the same Councell: But the Reformers of the Kalender whom Pope Gregory chose out, doe account the yeare 4 seconds lesse then the truth (but it breeds no sensible error in many yeares:) wherby it commeth to passe that in euery 400 yeares there is 3 leape yeares omitted, and in euery 133 yeares 12 daies 18 houres, or there abouts there is one leape yeare to be omitted.

The reason of all this is very plaine, and easie to be vnderstood, if this same worke would affect them.

Weekes	Between Trinitie Sun- day and Michaelmas Sun- day.	13 weeks.

The times of Marriage for this
year. 1631.

Wedding comes in the 13. day of January, and
goes out againe the 5. of February. It comes
in againe the 17. of April, and goes out a-
gaine the 14. of May. It comes in againe the
5. of June, and goes out againe the 26. of
November.

Of yeares monethes weekes and dayes.

The Julian yeare beginneth the first of Ianuary.
The Gregorian begins the 22. of our December.
The Church of England in late causes March. 25.
The yeare of the Kings raigne, March. 25.
The state of Florence, Siene, and Pisa March. 25.
The Empire (as the Julian) the first of Ianuary
The Church of Rome on their 25. of December.
The Egyptians and Persians the 18. of our Iuly.
The Arabians and most people of Asia, Septem. 13.
The Hebrews, Greekes, Sarazens and Turkes, 22. mon. Lunar.
The Tropickall (or true Solar) yeare. beginneth at the Clarus
Equinox, and containes 365. dayes, 6. houres, 9. minutes.

and containeth 365. dayes.

Of Moneths.

Solar, is the continuance of the Sunne in one signe.
Of Apparition, is 28. dayes, or foure weekes,
Of Margination, is 27. dayes and 8. houres.
Of Consecution, is from new Moone to new Moone.
For vse of Moone is according to the Kalender.

Of a weeke.

A weeke hath the name in latine Septimana, or seven mornings; yet wee commonly call it 7. nightes; or in law a semet.

The weeke beginneth on Sunday morning, or at midnight, so that our Sunday is the first day of the weeke, called Dies Dominicus, the Lords day.

Of a Day.

A day officiall is the time betwixt sunne-rising and sunne-setting: and the night from sunne-setting to sunne-rising. A day naturall is the time of 24. houres, beginning wherof with vs in England, and the Romans is at midnight. The Athenians at sunne-setting. The Babilonians at sun-rising. The Vmbrians and Astronians at noone.

January hath xxxj. dayes.

Full moone the 8. day, 2. min. after 5. in the morning.

Last quarter the 14. day, 38. min. after 11. at night.

New moone the 22. day, 22. min. after 6. in the morning.

First quarter the 30. day, 16. min. after 9. in the forenoone.

Vaux. 1631.

A Prognostication for the
year of our Lord God: 1631.
*Being the third after the Bis-
sextile, or Leape-year.*

Wherein is declared the state of the
four Quarters of the year, the E-
clipses, and other things of good
consequence.

With diuers prettie notes and
pleasant obseruations fit
for all sorts of people.

By *Iohn Vaux* of *S. Hel-
len Awck-land.*

*Scientia nullum habet inimicum præ-
ter ignorantem.*

Divining knowledge hath no grea-
ter foe,
Then ignorance, that onely seemes to
know.

*A true Description of the foure
Quarters of this yeare, 1631.*

And first of Winter.

VV Inter (according to Astronomi-
call computation) began the 12
of December last 1630. at what time the
Sunne entred into the first minute of the
Southerne and Tropicall signe Capri-
cornus, making the dayes shortest; and the
nights longest, at which time he began his
Northerne progresse towards his Aequa-
tor. This Quarter is of its owne nature
colde and dry, at which time the earth is
at rest, and ceaseth to bring forth, that it
may gather together againe, and recover
the lost strength against Summer: from
whence Winter most commonly bindeth
the earth, which it warmerh and covereth
with snow as with a garment, and refresh-
eth it with store of raine: For snow and ice
are comforttable to corue, and fruite, and
bringeth plenty of all things. And after
the Sunne hath accomplished his last de-

A Prognostication.

grees vnder Aquarius and Pisces, he openeth the earth with new and pleasant gales of winde, and prepareth the Spring time: and this is the generall and proper temperament of every Quarter of the year, which is alwayes to be considered in Meteorologie, lest that we speake of flowers in Winter, and of Ice in Summer.

The diseases incident vnto this Quarter, are such as accompany old age or dotage: viz. the Gout, Sciatica, trembling of the joynts, bleare-eyes, the Cough, the Stone and Strangury, the Crampe, Palsie, the shrinking of the sinewes, Dropsies, and all colde diseases that come by want of blood.

Of the Spring.

THe Spring beginneth at the Sunnes entrance into the first minute of Aries, making then the dayes and nights of an equall length throughout the world, which shall be this year the 10 of March. This Quarter is by nature hot and moyst. For then the Sunne is both come neerer vnto his verticall point, and also to startte of a hotter nature, causing thereby the drier windes to blow; of which is Subsolanus and Favonius, called the west windes where

wherewith superfluous humours are wasted and consumed, the seed conveniently sowne, and the ground stirred and made fit to bring forth; which setteth forward trees, vines, flowers, and leaues, and bedecketh the earth with grasse and hearbs. But because the new and tender corne lately sprung vp requireth moystning shewers, there ariseth in the morning with the Sun *Pleiades*, *Hyades*, & *Orion*, & in the evening *Arcturus*, tempestuous and moist stars, which stir vp raine and moist winds. At the length the Sunne (comming to Gemini) moveth a convenient and temperate heate to the former seed time.

The diseases of this Quarter are such as are incident vnto infancy, which be these that follow, viz. the small poxe, meascalls, squinancy, morbus Regius, shingles, ringwormes, or tetters, Saint *Antonies* fire, the waterpoggs, frosgan, scabbs, itchings, the fellon, pushes, inflammations, hot aques, and such like.

Of Summer.

Summer beginneth at the Suns ingresse into the first minute of the Northernne and Tropicall signe Cancer, which will be the 21 of Iune. This Quarter is by nature

A Prognostication.

hot and dry, at whose beginneth there ariseth Prosepe, Aselli, and other fixed stars of a moystning vertue, from whence by the Sunnes accesse is stirred up raine to bring forward corne and other fruite. But after that the things growing from the earth have attained a just increase, and by heat waxeth toward maturation and ripenesse, the Sunne approaching the hot signe Leo, there ariseth Syrius and Procion, which are stars of a hot constellation: therefore great heate is stirred up, to the tempering whereof the Echerian winds blow in the day time. Afterward the Sun comming to Virgo, the said heate is mitigated by little and little, and at the rising of Arcturus it bringeth raine.

The diseases of this Quarter be collicke, rising of the spleene, leprosie, pimple in the face, obstructions, feavers of blood, apostumes, iaudies, plurisies, Citches, inflammations, and such as proceede of dust choller and distemper of blood.

Autumne, or Harvest.

A Vtumnne beginneth the 14 of September, when the Sunne encreth in to the first minute of the Equinoctial signe Libra, making then the nights equal with the day.

the dayes, This Quarter is by nature cold and dry: For the heate ceaseth with the Summer passed. And although plentifull shewes doe then fall, so that the vintage is then abundant, and the winter seede-time made more commodious: yet notwithstanding the remaining heate of the ayre which by the Sunnes access to hot starres in Sagittarius is somewhat increased, and the moysture of the earth drawn vp, and the ground cherished and prepared for the winter following, lest colde coming of a sodaine, might hurt the seede and winter corne.

The diseases of this Quarter are crudities, and rawnesse of the stomacke, surferings, paines in the backe, darknesse in the sight, Vertigo, or turnings of the braine, head-ach, retention of the Urine, canker, fistulaes, emeroyds, the stone and strangury, rooth-ach, with impediments in the eyes, and such like.

HAVING now spoken something of the foure Quarters of the yeare, I hope it will not be amisse (vnder favour) to speak somewhat of the foure Quarter Sessions of the yeare: to the end that he that can but

A Prognostication.

reade,(and being any way tyed to the attendance of the Quarterly sitting of the Iustices) may hereby know their severall beginnings, without expecting any further warning thereof. And now to begin with the course of the yeare and place, Michaelmas Sessions the last.

The Statute made in the second yeare of King *Henry* the fift, and the fourth chapter thereof, saith: Over all the Realme the Sessions shall be:

In the first week after { *The Epiphany or Twelfth day.*
 The clause of Easter or Low Sunday.
 The Translation of St. Thomas the Martyr, which is always the 7 day of July.
 St. Michael the Archangel.

Seven dayes thou shalt keepe a solemn fast unto the Lord thy God. Deut. 16. 15.

Whereby it seemes that the Octaves of every severall feast would bee past before any thing be done, because it is the clause or conclusion of the feast.

Of the Countie or Moneth-Court.

NO Countie from henceforth shall be holden, but from moneth to moneth; and where greater time hath bene vsed, it shall be kept so still: *Magna Charta. cap. 35.* And afterward in the time of King Edward the sixth, this *Maior terminus* was restrained to a moneth only, as followeth:

No Countie Court, or Courts hereafter to be kept within this Realme, shall be longer deferred, but one moneth from Court to Court, and so the said Courts from henceforth shall be kept every moneth, and none otherwise; any usage, custome, Statute, or law heretofore had or made to the contrary in any wise notwithstanding: *3 Edw. 6. cap. 25.*

The necessity of keeping this Court every moneth, and upon a day certaine, is by reason of the Kings writs of Exigents, which must bee read there. But when the lawes are observed according to the true intent thereof, it will be a golden world.

Starre-Chamber dayes.

VV Ednesday and friday throughout

A Prognostication?

out every Terme-time are Star-chamber dayes.

Note also, that if any terme end not vpon a wednesday or friday, then, the next wednesday or friday after the ending of the Terme is a Starre chamber day.

But if a holy day fall vpon a wednesday or friday in the Terme time, then the Starre-chamber day is kept vpon the holy Eue.

Of the Eclipses of this yeare. 1631.

THere will be foure Eclipses of the two Lights this yeare; two of the Sunne, and two of the Moone. Both those of the Moone will be seene with us in England, but those of the Sunne shall not.

An Eclipse of the Moone in winter is cold and dry signes betokeneth great cold and freezing in the earth, aire and water. In watery signes it betokeneth plentie of raine and water. And in airy signes it betokeneth winde and tempest. And in fiery signes it betokeneth faire weather.

If the Moone be in any signe with the Dragons taile, and the Sunne with the head of the Dragon in the signe opposite, then

then happeneth an Eclipse of the Moone.

And againe, if the Sunne be with the
tayle of the Dragon in any signe, and the
Moone with the Dragons head in the
signe opposite, then likewise shall happen
an Eclipse of the Moone.

And if she be in the same degree, the E.
clipse shall be generall; And so she must
be in the head, or taile in the same degree,
or within 12 degrees, if the Eclipse fall.
And so in every coniunction or change
the Sunne and Moone must be in the same
signe, degree, minute and second.

Of the moving of the Planets.

Saturne abideth in every signe 30 mo-
neths.

Jupiter abideth in every signe one yeare.

Mars abideth in every signe 60 dayes,
and 16 houres.

The Sunne abideth in every signe 30
dayes, 10 houres, and a halfe.

Venus abideth in every signe 39 dayes,
and endeth her course in 348 dayes.

Mercury abideth in every signe 28
dayes and 6 houres, and endeth his course
in 338 dayes.

The

A Prognostication.

The Moone abideth in every signe two dayes, and a halfe, and almost 6 houres, and endeth her course from point to point in 27 dayes and 8 houres.

To each of the five planets is assigned 3 circles, that is to say; *Equans*, *differens*, and *Epiciclus*. There is also in these circles three manner of motions, yiz: *Motus directus*, *Stationarius*, and *Retrogradus*. *Motus directus* is even forward according to the Succession of the signes, and in the over part of the circle called *Epiciclus*. *Motus Stationarius* is in the middle of the circle *Epiciclus*, when a Planet seemeth to moue neither vpwārd nor downeward, backward nor forward. *Motus Retrogradus* is backward, when a Planet moveth contrary to the Succession of the signes, and in the nether part of the circle called *Epiciclus*.

Saturnus hath that name of *Saturatio*, making fulnesse and plency. *Saturne* grieveth more, and doth more hurt when he is retrograde, then when he is direct.

Iupiter is the Lord and giver of substance, and he is called father of the gods or Planets.

Mercurius, *quasi modius currens*, as running in the middle betweene *Venus* and the

the Moone. *Mercury* is alwayes either one signe before the Sunne, or one signe behinde him.

Sol, quasi solus lucens, alone shining, the well of light. All the rest of the Planets receiue light of the Sunne, as a glasse set before a candle receiveth light of the candle.

The Moone is called the fairenesse of the night, mother of all humours, Lady of the Sea, measure of times, follower of the Sunne, and changer of times.

Of Houres.

AN houre is no other thing than the 24 part of a day. And it is so called of the Greeke word *oura*, which in Latine is *tempus*.

The planetary and temporall vnequall houres, or comprehended by an vnequall number are called masculine: even or equall houres are called feminine.

The Astrologians call those houres combust, which are taken after the conjunction of the two lights: and in these houres an Astrologian doth not expedite or take in hand any busines,

Cano-

A Prognostication:

Canonicall houres are those which are addicted to diuine prayers, also they suffer by themselves some partition of the time and day.

And of those diuisions there are seven: viz. *Matutina*, *Prima*, *Tertia*, *Sexta*, *Nona*, *Vespertina* et *Complectoria*.

Matutina, is the dawning of the day, *Mat.* 20. 1. & 28. 1.

Prima, is the houre of Sunne-rising.

Tertia, is Nine of the clocke in the forenoone, *Mat.* 20. verse 3.

Sexta, is twelue of the clocke, called high noone. *Luke* 23. 44.

Nona, is three of the clocke in the afternoone. *Acts* 3. 1.

Vespertina, is the houre of Sunne set.

Complectoria, is the houre of Twilight.

At which time in some places, they vse to ring a bell for the space of an-houre, by the sound whereof all travellers and strangers may draw to the towne, and not wander out of their way.

The Quadrants of an houre.

AN houre is diuided into foure Quadrants or quarters, and every quarter containeth 15 minutes: so that the whole houre is diuided into 60 minutes.

A minute is the sixtie part of an houre,
and it is so called of the verbe *minus*, be-
cause by little and little it diminisheth the
houre.

A minute is divided into 60 seconds:
and every second into 60 thirds, and so
vnto an infinite number by a Sexagenary
division.

*Descripti hic breuiter cunctis cūpartibus annū
Vnde patet, celerè quod cursu labitur auum,
Et voluti rapido semper pede transvolat atas:
Sic hominū quoq; vita fugit, nec fixa manebit:
Ergo summo Pater me aeterna ad secula serua,
Nā nihil hac vita est, nisi cura laborq; perennis*

Here followeth a Table,
plainely explaining the Act a-
gainst Vsurie, 21. Jacobi, cap. 17.

Anno Dom. 1624. It was enacted
that no man should take for his
money above eight pounds in the
hundreth for a whole yeare:

That is to say, for every five

Crownes two shillings,

&c. As in the Table

following.

Principali.

A Prognostication.

Principall.	℥	♠	Interest	℥	♠
5 Crownes is	1	5	Interest	0	2
10 Crownes is	2	10	Interest	0	4
15 Crownes is	3	15	Interest	0	6
20 Crownes is	4	0	Interest	0	8

390 Crownes is	97	10		Interest	7	16
395 Crownes is	98	15		Interest	7	18
400 Crownes is	100	0		Interest	8	0

THis Act being made to continue for seven yeeres from the feast of Saint John Baptist Anno Dom. 1625. and so to the end of the first Session of Parliament then next following, was Anno 3. *Car.* Cap. 4. made perpetuall.

This last Table increasing from five Crowns, to 400. which makes 100. pound is easie enough without any familiar example. Because you have at the end of any broken or whole summe vnder 100. pound, the iust interest placed directly against it.

And there is no man that can rightly compute it otherwise. For you cannot reckon it iustly by the rate of even pounds
but

but either your account will exceede or come short. For if you shall take 19 d the pound, it will come five groats short of 8 in the 100. And if you shall take 19 d farthing for the pound, it will come to eight pound 5 d for 100 pound, and so exceed. But for more ease doe thus: Divide your 100 pound into eight equall parts, (because it is rated at 8 in the 100) and it will be 8 times 12 r 10 s . For which (according to the Statute) you giue or take 8 times 20 s , which is 8 r . Againe, subdivide 12 r 10 s into 20 equall portions, (because you would know for how much you must giue or take 12 d) and it will come iust to 20 times 12 d , for which you giue or take 20 times 12 s 6 d . which is 20 s . Now, double 12 s 6 d . and it will make 5 crownes which is 25 s . for which you giue or take 2 s in the year, &c. as in the former Table.

When money was lent for 10 in the 100. the borrower paid for foure Crownes two shillings. But now being rated at 8 for 100 r it is five Crownes for two shillings for a whole year.

A Prognostication.

A perfect rule whereby to finde the Golden number for ever without any addition.

F Rom the yeare of our Lord propounded, deduct 1500. and divide the rest by 19. and that which remaineth is your desire: But if nothing remaining, so that the division be quall, 19 shall be the golden number of the yeare proposed.

Example.

In this yeare of our Lord 1631. I desire to know the golden number: wherefore I substract 1500. and I divide 131. which remaineth by 19. and there resteth 17 for the golden number for this yeare: And this is the readiest way to worke by:

Here followeth a new devised Table, whereby to know the Epact for the English or foreign computation for ever; by two Article numbers framed for that purpose, and placed directly over the golden numbers; serving for any yeare past, present, or to come.

Artic

Article numbers for the English account. | 10 | 20 | 0

Article numbers for the forraigne account | 0 | 10 | 20

The vse of this Table is thus.

First finde in the Table, the Golden number for the yeare proposed, and adde vnto it, the article number, which is

placed directly over it, & those two numbers so added together (if they doe not exceed 30) is the Epact of the yeare desired. But if they doe exceed 30. the overplus is the Epact of the yeare which you seeke for. *Example.*

I would know the Epact for this yeare of our Lord 1631: the first of *March*. Wherefore by the rule before taught, I find the Golden number to be 17; wherewith I enter this table, and I find directly placed over the head thereof for this Computation, the article number 20: which beeing adde vnto the Golden number, maketh 37. wherefore I conclude that the latter figure 7. being the overplus of 30, is the Epact for this yeare. The same order must bee observed with the article numbers of the forraigne computation.

The golden num bers.	1	2	3
	4	5	6
	7	8	9
	10	11	12
	13	14	15
	16	17	18
	19	0	0

A Prognostication.

*How to find the change of the Moone
by the Epact.*

Adde to the Epact the number of monthes from *March* to the proposed month, including the said month of *March*: then take that number from 30: if the moneth wherein you desire to know the change haue 31 dayes in it, or if the moneth haue but 30 dayes, then take it out of 29. and you shall haue the day of the change remayning. But if in case the Epact, and the number of the moneths so added exceed 30: take away 30 as oft as you can, and that which remayneth deduct out of 30, then looke what number is left of 30, and that sheweth the day of the Moneth when the Moone chaungeth.

Example.

I would know when the Moone chaungeth in *September* 1631. the Epact is 7. and from *March* to *September* is 7. which are both in number 14. which being taken out of 29, (because *September* hath 30 dayes) there remaineth 15. which is the day whereon the Moone chaungeth.

A true Catalogue of the
names of the Bishops and their
severall Bishopricks in *England* and
Dominion of *Wales*, according
to their places in the Par-
liament House.

George Abbot Archbishop of *Canterbury*

Gilden.

1631.

A

Prognostication, published for this year of our Lord and Saviour Iesus Christ, 1631.

Being the third after Leapeyear.

VWherein is set downe, according to Art, an Astrologically description of the lykly seasons, of the foure Quarters of the yeare.

With other fitt matter, convenient for such a worke.

By G. Gilden φιλόμαθῃ.

Ludis in humanis divina potentia rebatur.

¶

LONDON.
Printed for the Company
of Stationers,
1631.

TO THE READER.

SEEING courteous Reader, that Prognostications and annuall Almanacks are commonly published for the use and behoofe of the common people, I haue thought good for their better understanding, to be as plaine therein as I might, & therefore haue written little in this Almanacke, but what (with small paines even of the simplest) may be easily understood. But seeing the predictions of the weathers dispose, are commonly (by the common sort) taxed of vntruth I haue thought good, onely to set downe the Aspects of the Moone, and the rest of the Planets, for the indicions to finde out of themselves, which being reduced into 12 Columnes, for the severall Monethes, I haue set them in my Prognostication. If any Gent. be desirous to enrich his understanding with Mathematicall knowledge, he shall finde the workes, both of ancient and moderne writers, so plentifull, as that there were neuer better, or nearer helpes, for the attaining thereof, then are at this present, as may well be proved by those excellent workes, and inventions, that haue lately bene published. Whereupon I conclude, that the attaining of these excellent Arts is now more easie, then at any time, in former ages, it hath bene in this Land. And so for this time, I bid thee Farewell.

The beginning and ending of the Termes this present yeare 1631. with their Returns.

Hillary Terme, beginneth on the 24. of January, and
doth end on the 12. of february, & hath 4. Returns.

- | | |
|-------------------------|-------------------------|
| 1. Octabis, Hillario. } | { 3. Crasti, Purifica. |
| 2. Quind. Hillario. } | { 4. Octabis, Purifica. |

Easter Terme, beginneth the 27. of Aprill, & endeth
the 27. of May, and hath 5. Returns.

- | | | |
|--------------------|----------------------|---------------------|
| 1. Quind. Pasch. } | { 3. Mensis Pasch. } | { 4. Quinqwe Pasch |
| 2. Tres Pasch. } | { } | { 5. Crasti, Ascen. |

Trinity Terme beginneth the 10. of June, & endeth
the 30. of June, and hath 4 Returns.

- | | |
|--------------------|-------------------|
| 1. Crasti, Trin. } | { 3. Quind. Trin. |
| 2. Octab. Trin. } | { 4. Tres Trin. |

Michaelmas Terme begins the 10. of October, and
endeth the 28. of November, and hath 8. Returns.

- | | |
|-----------------------|------------------------|
| 1. Octabis Michael. } | { 5. Crasti, Animarum. |
| 2. Quind. Michael. } | { 6. Crasti, Martini. |
| 3. Tres Michael. } | { 7. Octabis Martini. |
| 4. Mensis Michael. } | { 8. Quind. Martini. |

Note also, that the Exchequer openeth
eight dayes before any Terme begin (ex-
cept Trinity Terme) in which it openeth
but fower dayes before.

A brieue Declaration of the disposition of the foure Quarters
of this year., 1 6 3 4.

Of Winter.

VVInter, the first Quarter Astronomically, began the last year on the 21 day of December, when the arch flame of light, being in his greatest digression, from the Equator to the South, and scited in the tropicall point of Capricorne, bringing diuers impediments, evident in nature, bereaueth our Septentrionall parts of the heats and vigor, wherewith at other times (the Sunne being nearer, and more elevated) doth preserve and cherish the Elements, and all things compassed of them, whether vegetable or sensatiue,

So as now commeth cold, and darkness

A Prognostication,

to vs on this Northern part of the world:
But it brings the most pleasant, and comfortable time of the Summer to the Inhabitants neere to the South Pole; viz. *Nova Guinea, Chasdi, Terra del Fuogo, &c.*

In this Brumall Quarter, it is good to drinke little, and eate well, because at this time, mans stomacke, being hot, is aptest to digest.

The Diseases incident to this Quarter, are Pushes in the face, Leprosie, Tooth-ach, Red spots, Feavers, and scabs, the Fluxes of blood in the inferiour parts, paine of the Eyes, Palsies, Gouts, and such like.

Of the Spring.

THe Spring (according to Astronomicall computation) beginneth when the Sunne enters into the Decemter of Aries, or point of the intersection of the Eclipticke, and Equator, which happeneth this present yeare 1631. on the tenth day of March, having then provolved himselfe, to the punctuall intersection of the vernal Equinoctiall.

Gilden. 1634.

quinox: by which equall vicissitude of night and day, the world thereby, for that time, hath the fruition of his splendorayes most gratefull to the dwellers in the temperate Zone, as *Europe* is; but overfervent and parching heate, to the inhabitants neere the Line, in the Torrid Zone, as the most part of *Africa*, and *East Indies*, with the spicery Iles, and also to *New Spaine*.

This Quarter is the most comfortable of all the yeare, and of nature warme and moyst: yet the ordinary diseases thereof, are Leprosies, Red spots, Tooth-ach, Feavers of blood, Pushes, or wheales in the face, small poxe, Ringwormes, Paines in the throat, and necke; the Kings Evill, wennes, and griefes in the shoulders and armes caused by blood, faintings, and Phrensies.

Of Summer.

VV Hereas the continuance of a-
tion, doth necessarily adde
power of operation to all naturall agents:
and as it commeth to passe in Winter,
that by reason of the Sunnes remote po-
sition,

A Prognostication.

sition, that his continuance above the Horizon is shortest, and his absence vnder the same longest, thereby causing the shortest dayes, and longest nights: So now in Summer, which Quarter beginneth, when faire *Phabus*, having arrived to the highest pitch of elevation in our Horizon, by his farthest obliquation to the North, produceth the longest day, and shortest night in the yeare; which will happen this yeare 1631. vpon the 21. of June.

This Quarter is hot and dry in nature, and doth so accordingly, alter the humors in mans body.

The sicknesses agreeing to the nature hereof, are grieues and torments about the breast, ribbs, and spleene, Pusshes, Leprosies, and diseases of the face, (as in the Spring) blea'd, and sore eyes, with other impediments therein; the plurisie, heart, and stomacke aking, sorrow, vexation, Feauers of blood, Apostumes, Pestilence, the Iaundies, paine in the belly, and secret parts, with other infirmities proceeding of Melancholy.

Gilden. 1631.

Of Autumne.

THe Sunne having entred into Li-
bra, which is the other Dodeca-
temory, maketh equall Arches of
Sunshine on the surface of this Globe of
mortality, producing a second Spring,
which talleth out this yeare on the 13. of
September, And this Quarter is by nature
cold, and dry,

The diseases thereof, are properly paines
in the back, darknesse of sight, retention
of Urine, Fluxes of blood, paines in the
privie parts, with infirmities in the face,
also the Canker, Fistuloes, Emeroydes,
the Stone, and gravell, seavers of blood,
and impediments in the eyes.

Of the Eclipses.

THere will two Eclipses of the Moone
happen in this yeare of our Lord
1631. whereof the first will be on the
10 of May, at 7 a clocke and 14 minutes at
night, the Sunne being in 24 degrees
and 36 minutes of Taurus, and the Moon

A Prognostication.

24 degrees 36 minutes of Scorpio neere the Dragons taile.

The second Eclipse of the Moone will happen this yeare upon the 29 day of October at 11 a clocke at night: the Moone being then 16 degrees 15 of Taurus neere the Dragons head,

BEcause the predictions of the weatherers dispose are commonly taxed (by the vulgar sort) of untruth, I have onely set downe the aspects of the Moone and the rest of the Planets, having reduced them into 12 Collumnes for the severall moneths, which with the Table annexed immediately after, the judicious may easily finde out of themselves. For the better understanding whereof observe these Characters.

The Characters of the 7 Planets.

*The Aspects of the Planets defined
with their severall Characters.*

THe Conjunction is when two planets are both in one and the selfe same signe, and one selfe degree of the Zodiacke, and the Character is thus, \circ .

A Sextile Aspect is when two planets are distant one from another by a sixth part of the Zodiacke, which is two whole signes, or 60 degrees; and it is marked thus, \ast .

The Square Aspect is when two planets are distant one from another by three whole signes, or 90 degrees of the Zodiacke; and it is marked thus, \square .

The Trine Aspect is when two planets are distant one from another four whole signes, or 120 degrees of the Zodiacke; and it is marked thus, \triangle .

The Opposition is, when two planets are right opposite one to another, are distant the one to the other by six whole signes, or 180 degrees of the Zodiacke; and the Character is thus, \circ .

A plaine and easie Table, shewing the beginning, continuance, and yeares, of and since the beginning of the reigne of all the Kings and Queenes of this Land, from the Conquest, vntill this yeare.

A Prognostication.

A Table to know when
the Moone will be South
for every day in the
yeare.

The use of this
Table.

The age of
the Moone

Dayes.	Houres	Min.	Dayes
1	12	48	16
2	2	36	17
3	3	24	18
4	4	12	19
5	5	0	20
6	6	48	21
7	7	36	22
8	8	24	23
9	9	12	24
10	10	0	25
11	11	48	26
12	12	36	27
13	1	24	28
14	2	12	29
15	3	0	30

From the Change From the Full: so
as the Full the Daye Change the
comes to South: comes to South
after noone, before noone
before or after, as is noted in the foot of
Table.

Example:

The 7 day of January the Moone is 5
old: wherwith entring the Table in the
Column to the left hand, I find over against the

being found by
Kalender, that
is to say) how ma-
ny dayes are past
from the time of
her change, then
with enter the
Table: & having
found it in the
first Columnne
the left hand, it
be before the full
Moone; or to the
right hand, if it be
after the full
you shal have
coming to South

it 4 houres & 0 minutes, shewing me her
comming to the south wil be at 4 a clock
in the afternoone.

*How to know the houre of the night by
the Moone on a Sunne-Pyall.*

THe time of the Moones comming
to the South being first found in
the former Table in the manner a-
foresaid, look in a Sunne dyall, vpon what
houre, before or after 12. on the dyall the
Moones shadow falleth, for so many
houres it is, before or after the Moones
comming to the South.

Example.

I finde the Moone to bee come to the
south, on the aforesaid 26 day of January
at 4 a clocke in the afternoone: loo-
king then on a Sunne diall, I finde her
shadow to fall the 3. houre after 12 on the
dyall: whereupon I conclude, it is 7 a
clocke at night, which is three houres af-
ter the Moones comming to the south.

G

Astrono

A Prognostication.

Astronomical Elections for
Physicke and Chirurgery, depen-
ding on the Course of the Moone.

When the body is filled with
naughty and superfluous
humours, it is convenient
for thee to draw blood; but the time
being not circumspically weighed, may be
most dangerous to the patient, (where
no vnderstanding man is ignorant) but
when necessity vrgeth.

As for the Pestilence; Plurisie; Phrenisie
&c. a veine is speedy to be opened *ad
salutem.*

This considered, of medecines some be
purgatiue, some comfortiue, and others
in the meane betwixt both.

Medicines purgatiue, are either *salu-
or leniendo.* In the first, the Moone must be
in ♍ or ☿. And for the other, the Moone
must be taken, when she worketh most
in moystnesse, then in drynesse.

Furthermore in all purgatiue medecines
obserue the ensuing rules: For in the
ministracion of Physicke, are chiefly re-
spected

respected three things, viz. the Time, the Age of the Patient, and the manner of Administration.

For the time of the yeare.

FOr the election of time, consideration is to be had, that it be not in extremity, either of heate or colde. And therefore *Hypocrates, Part. 6.* and *46 Aphorif.* saith, that the Spring, and Autumne are best for Phisicke, and summer and winter bad, and not to be vsed, but vpon necessity: For in Summer the Humours boyle, by reason of heate, causing great annoyance to mens bodies; yet if necessitie vrge to take phisicke in summer, it is best to take it by vomite, and in winter (if necessity require) by purgation.

The time of the day.

In the morning fasting is best, or in the evening after perfect digestion: with this proviso, that the ayre bee temperate.

A Prognostication.

For the Age.

C Concerning the Age, you are to vnderstand, that decrepit old age, and young infants, are vnfit to haue Phisicke administred vnto them; or such as be vnder 14 yeares of age, and more then 60 yeares olde; or such as be exceeding fat, or very leane; and it is also dangerous for a young man to take much phisicke. For as a learned Phisician saith, *Hee that taketh much phisicke when hee is young, much repents it when hee is olde.*

Yet true it is, that the body abounding with evill and superfluous humours, requireth fit and convenient physick to purge it; wholesome medicines are in this wise to bee neglected: which being slightly regarded may prove very dangerous to any man.

For the Age to let blood.

I Nyouth, from the Change of the Moon to the first Quarter. In Middle age, from the first Quarter to the Full. In decrepit age, from the Full to the last Quarter.

ter: and in Olde age, from the last Quarter to the Change. And after bleeding vsa
not any violent exercise; no sleeping, no
venery, no gluttony.

In letting of blood also is to be considered the completion of the patient.

The manner of Administration.

Of the manner of phlebotomes Administration, Albumazar's opinion is, that the best times for Purgations, are to be chosen according to the Motions of the Moone in watery signes, as S. M. and K.

Others hold opinion, that the first halfe of the moone are the times: And when the Moone hold of course it is indifferent to take purgative medicines.

In letting of blood you must know what persons are fit to bleed, and what not: And if they be fit, how it is to be done inwardly, for the complexion and age: and outwardly, for the time of the yeare, & of the month as aforesaid.

And looke that those which haue not bene accustomed to bleed are not to be phlebotomized, lest it breed some malady, (unless as I haue said that necessity brye it) And in doing this you must haue good respect vnto the patient.

A Prognostication.

Certaine Elections concerning
Husbandry.

It is best to plant in the last quarter of the Moone: But sowe or set for Cereales, the Moone being in V. S. m. o. x.

Sow Corn, when the Moone is in S. plant or graft trees when shee is in d. o. x.

Remoue young trees in the last quarter of the Moone, from October untill February the Moone being in d. o. y.

Sowne your vines in February, March, September, the Moone increasing in V. o. m.

Fell Timber for building from Michaelmas to Christmas, in the wane of the Moone. Sow or libb Cartell, when the Moone is V. I. o. y.

Cut haire to grow, the Moone increasing in V. m. Destroy hayre, coynes, wennes, warts in the last quarter of the Moone.

Sheare sheepe, fell capstee, plash beds and crop or lop trees the Moone increasing.

Manure and fallow your land the Moone decreasing.

Set or sowe Beanes, Pease, Onions, Liches, Parsnips, Carrets, and the like, after full.

But gather hearbes and frutes to keepe in the last Quarter of the Moone, if be fayre and dry weather in the afternoont.

The later writers of husbandry report, that
 seeds of tender herbs, committed to the
 earth, in an age time, the moisture being in her
 quarter, doe more plentifully grow, than
 otherwise, especially being sowne after storms
 of raine on sunny and warme places: which ob-
 servation thus the wise flowers, nor from the
 earth at the time of sowing. And though
 the ancient writers of husbandry, have pre-
 scribed proper months, a dayes for the sow-
 ing of seeds, yet may every man observe his
 own rules, according to the nature of the
 place and season where they are sowne.

So that they consider also, that there
 be some seasons, that by nature
 doe spring, & so faller
 than others.

Laus Deo.

FINIS.

An Abstract of a direction concerning Real Contrasts;

VV Hosoever shall desire to
chale, or put to Sale, to
Leasse, or let to Farme, to Grant, All
Exchange, or otherwise to Contrad,
Deale, with or for any Lands, Le
Rents, Annuities, Mansion-houses, O
ces, saleable, or other Estates of what
ly value soever, or to save any such
danger of Forfeiture, through the want
present money. May either in their
names, or in the name of any other
by them have secure meanes with all
vacy requisite, for the speedy effect
what shall be desired, in any the Co
fore-said, or the like. *At the Porche*

built by Sir Thomas Gresham. 66

1499 1569 The Carles Rebellion in the North. 62

1502 1572 A admirable new Starre appeared
in the Constellation of Cassiopea, from
November 9. Anno. 1572. till March
31. 1574. 59

In the same yere was the Massacre
of the Protestants at Paris in France.

1509 1579 A deepe Snow. 52

1510 1580 A generall Earthquake, Aprill. 6. &
the same yere appeared a great blazing
Starre for the space of two Moneths. 51

1512 1582 The New Romane Kalender first pub-
lished: And in the same yere appeared
another blazing Starre, May, 15. 49

1518 1588 Tyllbury Campe, July, 25. 43

1521 1591 Hacker a new Christ proclaimed, exe-
cuted in Cheape-side, July 28. 40

1528 1598 Liberty of Religio granted in France. 33

1530 1600 The new Starre in the Constellati-
on of Cignas first observed. 31

The Earle of Essex beheaded the same
yere, February 25.

Memorable Accidents.

5533	1603	A great Plague in London, whereof dyed in one yeare, 30578. besides 7666. which dyed of other Diseases.
5534	1604	A new Starre in the Constellation of Ophiuchus appeared, continuing from September 1604. to January 1606.
5535	1605	The Gunpowder Treason discovered, Nouemb. 5.
5538	1608	In hard Frost.
5541	1611	The Noble Prince Henry dyed.
5542	1612	The Illustrious Prince Palatine of the Rhine, married the virtuous Lady Elizabeth, Daughter to King IAMES of England.
5543	1613	Middletons Water-works finished.
5548	1618	A Comet of blazing Starre, from Nouember 18. untill December 16. following.
5555	1635	An exceeding great Plague in London, and divers other places of England: whereof dyed in London, in one yeare, 15417 besides, 18348 which dyed of other Diseases.
		This Infection caused Michaelmas Terme to be kept at Reading.

80. Aron

Sofford. 1631.

Astronomical Calculations for this present
year. 1631.

The true precession of the Equinoctiall, or rather true distance of the first Stars of Aries from it (moved according to the succession of the Signes) according to Tycho Brahe, is 28. degrees, two minutes.

The greatest obliquity of the Zodiacke according to Tycho Brahe is 23. deg. 31. min. and 31. sec. but according to Kepler in his Rudolphine Tables, it is one minute less, viz. 23. deg. 30. min. and 30. seconds.

The Eccentricitie of the Sunne by those Tables is 3600. parts, the totall Signe being 100000.

D. M. Sec.

The *Auges* of the Planets according to the *Rudolphine Tables*. —

♄	26	35	26	7.
♃	7	15	36	♈.
♂	29	33	23	♊.
☉	6	15	29	♋.
♀	1	53	23	♌.
♁	13	43	13.	

Of the four Quarters of the Year.
and first of Winter.

The Winter quarter tooke its beginning upon the 11. day of December, in the year 1630. at five of the Clocke, and 36. min. after high noone.

The nature of this quarter is cold and moist; and therefore it is first resembled to the first declining Signe, to Aigme, to Water, and to the West wind.

Of the Spring.

The Spring taketh its beginning upon the 10. day of March at five of the Clocke, and 58. minutes in the afternoone.

The nature of this quarter is hot and moist, and therefore resembled well to Pouth, to blond, to the Fire, and to the South wind.

Of

A Prognostication,

Of the Summer.

The Summer taketh it beginning, vpon the 11. day of Iune at 9. of the Clocke and 50. minutes in the afternoone.

The nature of this Quarter is hot and dry, and therefore it is resembled to Infancy, to Choler, to the Fire, and to the East Wind.

Of the Autumne.

Autumne of Harvest Quarter begins this yeare vpon the 12. day of September, at 23. minutes after midday.

The nature of this Quarter is cold and dry, and therefore not bristly resembled to Old age, to Melancholy, to the Earth, and to the North Wind.

Poma dat Autumnus, formosa est messibus aestas,
Ver Prebet Flores, igne Leuatur Hyems. OVID.

Eclipses. 1631.

There will be presented to the view of the Inhabitants of the Earth this yeare, 4. Eclipses, 2. of the Sunne, and two of the Moone.

Those of the Sunne will be small, and not any of them visible in our Horizon, I will therefore onely briefly touch them; knowing the times with vs, when they will happen vnto some Nations vpon the Earth.

The first Eclipse then of the Sunne, will be vpon the 11. day of Aprill about ten of the Clocke in the forenoone, a very small one, and not seeme of vs, by reason of the Parallel of the Moone.

2. The second will happen vpon the 17. of day October, about nine of the Clocke in the morning.

But those of the Moone will be very long and terrible.

1. The first of the Moone will happen vpon the 7. day of May being Thursday: totally Eclipsed.

The beginning, at 1. hou. 24. minutes.

The beginning of totall darknesse at 6. h. 27. min.

The middle at 7. h. 19. minutes.

The end of totall darknesse at 8. hou. 3. min.

The end of the Eclipse at 9. hou. 5. min.

The whole continuance of this Eclipse from the beginning to the end will be 3. heures, 41. min.

The continuance of the Moone in totall darknesse will be an houre 36. min.

The Digits or parts Eclipsed will be 21. and a halfe of the Digit. In the middle of the Eclipse the Moone will be in the 14. deg. 35. min. of Scorpius, neere unto her Node ascendent commonly called the Dragons rayle, then being in the 14. deg. 40. min. of Scorpius, and she will be diametrically opposite to the Sunne, he then being in the 14. deg. 46. min. of Taurus, and neere unto the Moones Node ascendent called the Dragons head, being then in the 14. deg. 40. m. of Taurus.

We shall not see about halfe thereof, for the Moone will be totally Eclipsed, the Sunne then setting.

The other Eclipse of the Moone will be upon the 19. October at night, being also a totall Eclipse.

The beginning at 8. hou. 52. min.

The beginning of totall darknesse at 10. hou. 4. m.

The middle at 11. hou.

The end of totall darknesse at 11. hou. 57. min.

The end of the Eclipse at 1. hou. 9. min. in the morning.

The whole continuance from the beginning to the end, will be 4. heures, 17. min.

The stay of the Moone in totall darknesse, will be 1. houre. 3. min. and 20. sec.

The time of Incidence or Emerston will be 7. h. 12. min.

The Digits or parts Eclipsed will be 19. ⁴/₅ of one Digit.

In the middle of the Eclipse, thus the Luminaries and Nodes will be placed in the Zodiacke, viz

The Sunne in 16. deg. 15. min. of Scorpio.

The Moone, in 16. deg. 15. min. of Taurus.

Dragons Head 15. deg. 14. min. of Taurus.

Dragons Tayle, 15. deg. 14. min. of Scorpio.

Of the Heavens, Starres, and Planets.

Caen in Hebrew of tongues is called *Schamaym*. which word (as some affirme it) compounded of *Scham*, signifying

A Prognostication,

ing There, or in that place, and *Maym*, waters. Wherunto they conclude, that Heauen is nothing but *Aqua confusa*, waters firmly compacted together, as it were Christall.

The Talmudists alledge, that it is epher compounded of the verbe *Schaah* signifying (in *Hithpael*) to wonder, and *Maym*, because men are broune into exceeding admiration, considering the workmanship of the Heauens: Of *Maym* and *Maym* fire and water. And thereupon Rabbi Bechai the beginning of *Parasib* wrieth after this manner: The Heauens (saith he) were created in the beginning, and are called *Schamaym*, because they are *Asch* and *Maym* Fire and Water. And in *Bereischith Rabba* it is thus read, The Heuens are so called, because men wonder at them, saying, What are they made, they are made of fire, they are made of water, this is a thing to be admired.

Yet true it is that many excellent Grammaticians suppose that this Hebrew word is neither derivative, nor compound but primitive, on which opinion is that famous Hebrew Valentine Scindler. And Fagius a great Author in that tongue (vpon the first Chapter of Genesis) wrieth that beneficall proueth out of the Ishmaeliticke tongue which beareth great affinity with the Hebrew) that *Schama* signifies nothing else but High or above.

But howsoever it be, or whatsoever is the true Etymology of that word, this we are sure of, that Heauen in Scripture is threefold, 1. Cor. 12. 1.

1. *Thyis* where the Firmament are. Gen. 1. 18.
2. *Starry* where the Starres are. Gen. 1. 17.
3. *Glorious*, where Soules are, and it is called Heauen of Heauens, 1. King. 1. 37. and of Philosophers *pyreum*.

The middlemost of which three called the Firmament, that which containeth all those beautifull and bright Lights created by the Almighty Elohim, God in three persons, vpon the fourth day of the Creation, Gen. 1. 14.

Which Lights (whether moued in their severall spheres

according to the generall opinion received from reverend
Antiquity: or rather as Fishes in the sea, or Fowles in the
Ayre, according to Tycho Brahe, and others the best moderne
Astronomers by the common consent of all Astronomers, are of
two sorts, that is to say, Fixed and wandering, called Planets
of Planaomai, signifying to wonder. Fixed Starres are di-
vided into 48. Constellations, which are distinguished into
degrees of magnitude; Of the first magnitude are 5. of the
second, 44. of the third, 108. of the fourth, 474. of the fifth, 217.
of the sixt, 49. to which are added 5. of an uncertaine mag-
nitude called cloudy, and 9. other yet more obscure. The Plan-
ets are in number 7 which are these, *h.* the highest, and next
nearest the fixed Starres; *u.* next, then *j.* *s.* *p.* *v.* *m.* in
order. Know for the Diameters, magnitudes, and distances
them, as well fixed as wandering: behold this Table,

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49 50 51 52 53 54 55 56 57 58 59 60 61 62 63 64 65 66 67 68 69 70 71 72 73 74 75 76 77 78 79 80 81 82 83 84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 100	have their true Diameters in propor- tion to the earths Di- ameter, as	19 to 4 269 to 60 25 to 6 19 to 5 119 to 36 21 to 8 31 to 11 12 to 5 51 to 1 18 to 43 6 to 11 3 to 8 2 to 7	their bodies containyng the earths body.	107 90 70 55 36 18 22 14 133 13 6 19 49	Times The distances in Semidiameters of the Earth.	19000 10550 3990 1150 1745 1150 115 6	Their true motions.

note that the Semidiameter of the Earth containeth
English Miles (according to the late ingenious mea-
sures of Willebrordus Snellius) the Centre thereof be-
ing 100 Miles.

A Prognostication.

Sofford. 1631.

Physicall Obseruations.

If the body be filled with naughty & superfluous humors
then were it convenient for ther to draw blood. Observing.

for the { Phlegmaticke, that the { Aries, or Sagittarius.
 { Melancholy, } Moone { Libra, or Aquarius.
 { Cholericke, } be in - { Cancer, or Pisces.
 { Sanguine, any of these for said signes are good

Likewise you must obserue that the best time

for { Youth } to be let { Change to the first quarter.
 { Middle age } Blood { First quarter to the full.
 { Elder age } is from { Full to the last quarter.
 { Old age } the { Last quarter to the change.

Notwithstanding these and other such like cautions, if the
letting be for the Phrensie, the Pestilence, the Squin-
the Plurisie, the Apoplexie, for a continuall Head-ach,
scurding of choller or blood, or for any hot burning fea-
or other exereame paine: A man (I say) in such a case
may not carry a chosen time regularly set downe by the A-
stronomer, or Physitian because happily the Patient might
suffer in the means season.

Briefe Rules of Husbandrie.

Disseet seeds, plant and graft, the Moone in Taurus, Vir-
go, Capricorne, or Aquarius, the Wind not easterly.

Heare where in the increase of the Moone.

fell Timber for building, towards and in the last quart.

fell f-yth and Coppice for fellwell, in the first quarter.

Sild and lib Cattell, the Moone in Aries, Sagitar, or Cap.

kill fat Swine for Bacon, about full Moone.

Cut Vines, in February or March

Almone Trees at the last quarter, betweene Hollantide
Twelfetide.

VIVAT REX.

In six hundred fifty nine yeeres,
Twenty foure Princes (as appears)
Have raign'd and dyed, one after one,
Long liue King Charles, else we are yndone.

Perkins. 1631.

A description of the foure Quarters of the
Yeere, and first of Winter.

☉ in ♍, ♎, ♏.

According to the custome of Writers in
this kinde, Winter Quarter is the first
Quarter, which take beginning the 12. of De-
cember, 1630. at what time the Sunne entred
into the first degree of the cold and dry signe Ca-
pricorne, being then most remote from vs in his
farthest South declination, causing the dayes
with vs to be shortest, and the nights longest:
which Quarter continueth vntill the Sunne
hath slowly passed through ♍, ♎, ♏. This
Quarter doth naturally resemble old age. The
diseases incident to this Quarter, are Coughes,
Cathars, Rheumes, Obstructions of the Lungs,
and such like, proceeding of cold and moist cau-
ses, &c.

Of the Spring.

☉ in ♈, ♉, ♊.

This Quarter doth take his beginning the
eleuenth day of March, at what time the
Sun entred into the first minute of ♈. & doth
continue whiles the Sunne is passing through
these three Vernal Signes, ♈, ♉, and ♊. This
Quarter doth resemble growing youth. The
diseases incident to this Quarter, are like to
hot Feauers, small Pox, Measels, Scabs, &
Plurisies.

Perkins. 1631.

Of Summer.

☉ in ♋, 17.

The Summer Quarter doth take his beginning, when the Sunne doth enter into the first degree of Cancer, which will be this yere the 12. of Iune, about 7. a clocke and 11. minutes in the morning, and doth continue whiles the Sunne passeth through ♋, 17. Soe are the dayes longest, and the Ayre hottest, therefore, but for necessity, bid physcke men.

Of Autumne.

☉ in ♎, 17.

Autumne, or Harvest Quarter (commonly called the fall of the Lease; of some, the latter Spring) doth beginne when the Sunne doth enter into the first degree of Libra, making againe the day and night of equall length: which will be this yere the 13. of September, about 7. in the morning, and doth continue whilest the Sunne doth passe through ♎, 17.

Perkins. A Chronology.

Years of the World.	A briefe Chronologicall Description of many things worthy of memory, that have hapned since the Creation vnto this present yeere of our Lord 1631. with the yeere of the world, in which they hapned: faithfully collected out of many Authors, as appares. King Charles hauing beene
in Spaine, arrived in En-
gland the 6. of October.

1623 8

5587 In which yeere our Queene
Mary, vpon the 12. of June
arrived at Douer.

1635 6

Year of Perkins, A Chronology. Year of
before C. 1200

- 5588 In which yeere upon the 12.
of June, was a strange and
unheard of tempest in and a-
bout London. 1616
- 5590 In which yeere upon the
2. of June, the draw-bridge
was taken up, and newly re-
paired, and was finished by
the 13. of the same moneth. 1618
- 5592 In which yeere the 29. of
May, to the great ioy of all
good Subjects, was our hope-
full Prince borne, and on the
morrow being Sunday, our
Kopall King Charles came to
St. Pauls Church, to the Ci-
tizens great ioy and comfort.

Since the yeere of the Worlds Creation.

The

The Place of the Planets in the Zodiacke.

♄ Is direct vntill the 16. of February, and then retrograde vntill the 6. of July, and then direct all the rest of the yeere.

♊ Is direct vntill the 29. of July, and then retrograde vntill the 23. of November, and then againe direct all the yeere.

♋ Is direct vntill the 24. of November, and all the rest of the yeere retrograde.

♌ Is direct vntill the 9. of November, and then retrograde vntill the 19. of December, and then againe direct the rest of the yeere.

♍ Is direct vntill the 22. of Februarie, and then retrograde till the 17. of March, and then direct vntill the 20. of June, and then retrograde vntill the 13. of July, and then direct vntill the 14. of October, then retrograde vntill the 4. of November, then direct the rest.

Eclipses.

This yeere there will be foure Eclipses, two of the Sunne, and two of the Moone, but neither of them of the Sun, will appeare in our Horizon, nor all the first of the Moone, by reason that the Sunne will not be wholly set, but the later of the Moone, which will bee on the 29. of October, the Moone then being in Taurus will suffer Eclipse, about 8. a clocke in the Evening.

Venus is our bright Morning Starre, from the beginning of this yeere untill the 12. of February, and then is our Evening Starre untill the 29. of Nouember.

The · vse of the aforelayd Table.

First hauing a walking-staffe diuided in 12. equall parts, (bee the staffe of what length it will, being equally diuided) wherewith walking, if you desire the houre of the day, if the Sun shine, set your staffe vpright, and see how many of those parts there are in the length of the shadow; then looke in the Table, knowing what moneth and day of the moneth it is, which day, if you finde not in the Table, then take the day that is neereft vnto the day you seeke for, either before the day, or after the day, and looke in the head of the Table, and you shall finde the houre, either before noone, or after noone, as the Table sheweth; for the Sunne hath like altitude at like distance from the Meridian line, in the fore-noone ascending, and in the after-noone descending.

Example.

Walking abroad the 22. of Nouember, when the Sun is in 10. degrees of Sagittary, I would know what time of the day it is; I set my staffe vpright, and I finde the shadow to containe 10. of those parts, that is the length of my staffe 10. times and 9 parts of the 12. whereby I perceiue that it is either 10. in the fore-noone, or else 1. in the after-noone; and so of the rest, as the Table sheweth.

Fullmoone
 the 6. day at
 11. a clocke 13
 min. before
 noone.

Last quar-
 ter the 12. day
 at 6. a clocke
 and 4. min. in
 the morning.

Wet come in
 New
 moone the 11.
 day, at 9. a
 clocke in the
 forenoone.

First quar-
 ter the 20. day
 at 4. a clocke
 in the morning.

May hath xxxj. dayes.

Now gallant *May* much pleasure takes,
With fragrant Flowers to decke the Fields:
Walke early now for thy healths sake;
For curious fents the Morning yeelds.

Chamberlaine. 1631.

A
Prognostication, for the
yeare of our Lord God,
1631.

Being the third after the Leape yeare.

Contayning many profitable Rules,
and compendious Tables
fitting for such a
worke.

Set forth according to Art, by Joseph
Chamberlaine, Student in the
Mathematickes.

*What God commanded wrought it was,
At once with present speed :
What wee doth will is brought to passe,
With full effect indeed.*

LONDON.
Printed for the Company of
Stationers. 1631.

**A most Plaine and easie Table, shewing the true
time of all the Kings Raignes, beginnings, continuance,
and end of their raignes, with how long it is since the
raigne of each King and Queene of this Land,
vntill this present yeare, 1631.**

How for to find all the moneable Feasts for euer, according
our English Kalender.

First enter the Table next ensuing, seeking there the
Golden Number, or Epact, which is set out, in the first

Chamberlaine. 1631.

upon the left hand, and so having found that number, proceed directly vnto the right hand, vntill you come right vnder the Dominicall Letter for the purposed yeare. So shall the number in the common angle shew you the number of weekes, and the number ouer the Dominicall Letter, the odd dayes, to be added, which is the distance of weekes and dayes before Christmas and Shrove Sunday, of the Internallum Minus.

Example.

This yeare 1631. the Golden number of Prime 17. and dominicall Letter is B. Search therefore in the first row vnder the left hand, vnder the Title of Prime for 17. which being found, proceed towards the right hand, vntill you come vnder the letter B, and in the common angle you shall find 8. which is 8. Weekes, and ouer the letter B, 1. which standeth for one day; so the Internallum Minus of distance betwene Christmas day, and Shrove Sunday, is this yeare 8. weekes and one day. And so for any other yeare whosoever.

A way how you shall finde the Golden number or Prime for euer.

Adde to the yeare of our Lord one, then diuide that summe by 19. the remainder is the Prime of Golden Number; but if nothing remaine, then the Golden Number of Prime is 19.

A Table of the Internallum Minus for euer.

A Prognostication.

Astronomical Calculations for this present
years 1631.

The true magnitude of the Tropicall yeare is 365. dayes
5. houres. 48. min. 45. sec. And in this time the Sunne
maketh his Revolution thorough the 12. Signes, and re-
turnes againe to the first min. of the Signe Aries, at which
time the Tropicall yeare beginneth.

The Precession of the Equinoctiall is according to the Prae-
tenticke Tables, deg. 17. min. 7. sec. 6. thirds & 55. fourths.

The Anomaly of the Equinoctiall is 2. sex. 57. deg. 50. m.
4. sec. 29. thirds, 21. fourths.

The Obliquity of the Zodiacke, is 23. deg. 28. minutes
9. sec. 37 thirds.

The Excentricitie of the Sunne is 3196. the totall being
100000. or one part. 55. min. 54. sec. 20. thirds, the rest
being 60.

D. M. sec. th. fourths.

Locus Apog.	♈	0	9	8	38	56	W.
		4	7	13	4	52	D.
	♊	29	2	50	58	56	♊.
	♋	10	27	44	52	55	S.
		2	16	43	55	24	55
	♌	1	10	12	53	1	7.

But according to Tycho Brahe, and our Modern
Astronomers the Precession of the Equinoctiall is 28. deg.

Note that the Apogzum of the Sunne, is (by the ob-
servation of Tycho, and our late Astronomers) in the 6. deg.
min. 14 seconds of Cancer.

The Circumference of the Earth is 21600. miles, whose
diameter is (according to Archimedes) 6872. Miles, or
eleven parts of Miles.

The Globe of the Sunne containeth the Globe of
Earth 162. times.

It containeth the Globe of the Earth 91. times. 29. parts
of one time and five eight parts. The Moon is the 43. parts

Chamberlaine. 1631.

Earth. $\frac{1}{2}$ is the 39. part of the Earth. $\frac{1}{2}$ is the 31000. part of the Earth.

Of the Eclipses happening this present yeare.

1631.

There will be foure Eclipses this yeare, two of the Sun, and two of the Moone.

The first Eclipse will be of the Sunne, the first day of May according to the new reformed account, but the 21. of April according to the old account used here in England. About 9. a Clocke in the forenoone. And this Eclipse will be seene toward the South, to those that inhabit about the Antarticke Circle; as at Magellanica, and those Southern parts. But it will not appeare to vs here in England. The Digits Eclipsed are, 4. 21.

The 2. Eclipse will be of the Moone the 15. of May, according to the Gregorian Calendar, but the 4. day of May, according to the Julian or English account. At 7. a Clocke, and 7 min. at night, at which time the Sunne will be in the 14. deg. 36. min. of δ , and the Moone in the 24. deg. 36. min. of m , not farre from the Dragons taylor.

The Latitude of the Moone will be at the beginning of the Eclipse, 6. min. 16. sec. Sep. Descen.

At the middle, 0. min. 17. sec. Sep. Descen.

At the end, 5. min. 39. sec. Mer. Descen.

The Digits Eclipsed will be 21. 31. 57.

The beginning of this Eclipse will be, at 5. a Clocke, 24. 37. seconds.

And will be wholly darkned at, 6. hour. 25. min. 38. sec.

The middle of true opposition at, 7. houres, 17. min. 34. sec.

And will begin to receiue some light, 8. hour, 3. min. 30. sec.

The end will be at, 9. houres, 4. min. 34. seconds.

The whole time of this Eclipse will be, 7. hou. 39. m. 54. sec.

which is three houres and almost a third part.

We here in England shall not see the beginning of this Eclipse,

A Prognostication.

Eclipses, by reason is 16 7. a Clocke, and 43. min. before the Sun setteth, at which time the ☾ will rise Eclipsed to vs.
 The third will be of the Sunne the 25 day October, according to the Forraigne accompt, but the 15. day of October according to our accompt, at 5. a Clocke and eight minutes, 40. sec. in the Morning, at which time the Sunne will be Eastward of vs, and appeare to those that inhabit the East part of Asia, but it will not be visible to vs.

Though two Eclipses of the Sunne,
 This yeare shall other Countries see,
 Yet vnto Brittaines Hemisphere
 There shall no Sunne at all Eclipsed bee.

The fourth and last will be of the Moone, the eight day of Nouember, according to the Church of Rome, but the 29. day of October, according to our Churches accompt: at 10. a Clocke at night. At which time the Sunne will be in the 16. deg. 14 min. 13. sec. of M , and the Moone in the 16. deg. 17. min. of S , not farre from the Dragons Head.

The Latitude of the Moone	{	at the beginning,	0. min, 11. sec. M
		at the middle,	5. min, 18. sec. S. A.
		at the end,	10 min. 46. sec. S. A.

The Digres Eclipsed will be, 49 48 45.

The beginning will be at, 8. hour. 51. min. 52. sec.

And will be all darke at 10. hour. 12. min. 36. sec.

The middle or true opposition, at 11. hour. 25. sec.

And will begin to receive light, at 10. hour. 57. min. 24. sec.

The end will be at 1. hour. 08. min. 58. sec. morning

The whole time of this Eclipse will be 4. hour, 17. min. and will be seene the whole time of duration, to vs here in England, if the night be cleare.

The Naturall cause of the Eclipse.

The Eclipse of the Sun is nothing else but the direct passing the body of the Moone betwene the Sunne and the Eye of the Moone in a Diametricall Line at her Continuance.

Chamberlaine. 1631.

of Change, both hinder vs of the light of the Sunne, the being verthe the Sunne and our light.

Wherby you may gather the darknesse at Christs death, not to stand by naturall Eclypsicall cause; but by supernaturall of myracle: for it was at the Full Moone (as may be proued by the Scripture) which enforced Dionysius to speake at the time of Passion,

*Aut Deus Nature passiter,
aut Mundi machina dissoluitur.*

The cause of the Eclypsed, is nothing else but the direct putting of the darke body of Globe of the Earth, betwene the Sun and the Moon, for the Moon having no light of her selfe, but that she borroweth of the Sunne, being in a Diametricall line at her opposition of full is hindered of that borrowed light by the shadowe of the Earth.

For note the Sunne cannot be Eclypsed but at the Conjunction of Change as men call it, nor the Moone but at the Opposition of full, as Lucretius saith in his first Booke.

*Corina, Coello,
Iam Phoebe toto fratrem cum redieret Orbe.
Terrarum subita percussa expalluit umbra.*

When as the Moone vnto the World,
Her Brother Titan bright,
In forme would represent, shining
With face both full and round
She suddenly was sore wounded;
and therewith le't her light,
Titan causing the Earths shadow,
Her beauty to confound.

The

A Prognostication,

• The generall disposition of the foure Quarters of the yeare, and first of Winter,

○. in ♍. ☿. ♋.

The Winter Quarter according to the Astronomers account, is already begun, namely at such time as the Sun made his entrance into the first min. of the Signe ♍, which was the last yeare the 11. day of December, at 3. a Clocke, 36. min. in the afternoone; At which time the Sunne having arrived to his greatest South Declination, made then the shortest day & longest night here with vs; but having begun to make already his Recession through the Winter Signes (viz. ♍. ☿. and ♋.) and to returne againe from that Winter Solstice toward that Equinoctiall Signe Aries, at which time this Quarter ends.

This Quarter is naturally cold and moyst, howbeit sometimes it so fortuneeth that this Quarter doth exceed or fall in his Nature.

The Diseases ordinarily bearing sway this Quarter, are most proceeding from the Head, by distillation vnto the other parts; as Cathorres, Coughs, Hoarsenesse, Stoppings, and Inflammations of the Lungs, Deication of Appetite, Paine in the Shoulders, Backe and Breast, Collicke, Stitches, both in the sides and Loynes, Cricks in the Joynts, with diuers the like.

The Trees now bare and naked stand
No Fruit nor leaues are scene,
But all consum'd by BORNS breath
as if they had not beene.
Ths Feilds likewise with greene all spread
Appeared to our light,
But now each Feild and pleasant Meade
All Mantled is with Whire.

Chamberlaine. 1631.

Of the Spring, the second Quarter of the Yeare.

O in $\gamma \delta \Pi$.

From the greatest Declination Southward, whereas I
spake before, the Sunne beginning now to mount toward
our Zenith; causing the Vernal Equinox, and the begin-
ning of the Spring, which is the second Quarter of the
yeare, the same beginning now when Winter ended, that is
to say, when the Sunne entereth the first minute of the E-
quinoctiall Signe γ , which is this yeare the 10. day of
March, at 5, a Clocke 56. min. in the afternoone; at which
time the dayes and nights are of equall length. So accom-
pning forth along the Signes of the Spring, (viz. γ, δ, Π)
untill at length he commeth vnto his greatest exaltation and
height aboue our heads, when Summer the third part of the
yeare beginneth.

Of naturall complexion, this Quarter is moyst and
warre, agreeing with Winter in one quality, whom it im-
mediately followeth, and in Summer in another, befor
whom it commeth.

The Diseases most incident to this Quarter, are Pelan-
chlike madnes, Head-ach, falling-sickness, Fluxes of blood,
and Choler, Squinancies, infectious Coughs, Tetters and
Ringwormes, Leprosie, Blaines, Scabs, small Pox, and
diuers the like.

The pretty Birds vpon the Trees,
Now take delight to sing,
Whilest TITAN with his glorious beames
Doth make the branches spring.
And Flora now much pleasure hath
To view her tender flowers,
Which lately sprang vp from the Earth,
By meanes of April showers,

A Prognostication,

Of Autumbe or Haruest, the last part of
this Yeare.

☉ in ♋, m, ♄.

In Trueth, of the last part of this common yeare, beginneth immediately after the Sunnes departure from the last minute of ♍, into the first min. of ♋, which shall be this yeare the 13. day of December at noone. And then is the second Hye-mall of Winter Equinoctiall: at which time the dayes and nights are of equall length in all parts of the World. Thus consequen. ly continueth this season, whilst the Sunne runneth thorough the 2. Signes ♋, m, ♄ until he cometh into the last minute of ♋, at which time this part of the yeare endeth.

The naturall temperature of this quarter, is to be cold and dry, variable and inconstant: a dangerous time for diseases and diseased persons.

Griefes overthrowing the dangerous estate of Man begun by this Haruest Quarter, are many of the Summers sicknesses, few of them ending at this time, more increasing, and bringing many to their long home: besides Consumptions, Dropsies, and notable obstructions, Sciatica, and many other proceeding of Melancholy.

The Spring was brag of her sweet Flowers,

And Summer of his suires,

But let them brag so long as I

Of them may reape the fruites;

For what the Spring brought forth in flower,

Was riped by Summers heate,

But now I dayly spend my houres,

To Rore them vp for weate.

Chamberlaine. 1631.

Of Summer, the third part of the Yeare.

© in S. N. M.

The Sun having run forth his race thorough the Signes of the Spring, V & II vntill at length he commeth vnto the last minute thereof, and soone passeth into the first minute of S. whereas he maketh the Equall of Summer Solstitium, and our longest day in the yeare; which is this yeare the 11. day of Iune, at 9. a Clocke and 57. minutes afternoons; And then is he in his greatest Declination Northward, and highest to our Zenith; in so much that he walketh away from vs, and beginneth to decline towards the South, and maketh the dayes shorter and shorter, so he passeth through the Signes of the Summer, (viz. S, N, M.) vntill he commeth to the last minute thereof, at which time this part of the yeare endeth.

Airisties like to molest the state of mans body; are many of those that I haue named in the Spring Quarter Hoecor, intermisting and buruing Tertians, Quartians, and feauers of all sorts; and also the Cholerike Humors, fluxes, and sharpe dropping Eyes, grise in the Eares, sores Mouthes, Botches and Biles, with dissoluing Sweates, and the like.

Now is the pleasant Summer time
In which the glorious Sunne,
Is mounted vp vpon the Crabbe
His Northren course to run,
Where from aloft hee doth behold
The craggy Earth so dry,
The which in Winter staru'd with cold
Wish heere? Now like to fry.

Of

A Prognostication.

Certaine Elections to be chosen by course of
the Moone.

Let blood for young persons, from the Change to the first
Quarter.

For them of middle age, from the first quarter to the full.

For elder folke, from the full to the last quarter.

For old folke, from the last quarter to the Change.

The best times to purge, if the time be temperate.	by Drinckes by Electuaries. by Pilles.	the Moone in	{	m.

Fell Timber fro S. Iohn Baptist, to the end of the year.

Remoue Grafs of young Trees, at the last Quarter.

How to finde the houre and minute of the Rising
and Setting of the Sunne ; with the length of the Day,
and Night, for every day this Yeere.

You shall finde placed in the 6. Column of my Almanack,
every day of the yeare, right against the day of the Moone.

Chamberlaine. 1631.

the houre and minute of the rising of the Sunne: which houre and minute there found, being taken from twelue, will leaue the time of the Sunnes setting: and the time of the Sunnes setting being doubled, will shew the length of the day, and the houre of the Sunnes rising, being doubled will shew the length of the Night.

Example.

The 9. day of February, the Sunne, riseth at season of the Clocke, as in the 6. Colunne of my Almanacke it doth appere; for hauing found the 9. day of February, right against that in the sixth or last Colunne of rowe of my Almanacke, you shall finde these figures; 7. 0. which is 7. a Clocke, and no minute. Now by subtracting 7. from 12. there remains 5. which is the houre of the Sunnes setting for that day.

And by doubling 5. & houre of the Sunnes setting, you shall haue 10. the length of the day; & by doubling of 7. the houre of the suns rising, you shall haue 14 the length of the Night; and so of any other day in the yeare.

A Table to know how long the Moone shineth, and when shee Riset and Setteth.

The vse of this Table is this. first find the age of the Moone in one of the sides of the Table, vnder the title of Increasing, if it be before the Full: but vnder the Title of decreasing, if it be after the full. Which age

The age of the Moone increasing.	The Houres she shines.	Her age decrea. sing.

A Prognostication.

age being once found answering thereto, shall ye see the hou. and min. of her shining to be continued from the Sun setting, all the increasing till the full, all which time, that is from the change vntill the full, she shineth in the Euenings, so many houres and minutes after the Sunne set, as is to be found by the Table: and after the full she shineth in the morning so many houres and minutes before the Sun riseth as the Table sheweth. Now for her rising and setting doe thus all the increase, adde to the houres of the Sunnes rising, the houres and minutes found in the Table, and it sheweth her rising: againe adde to the houres and min. of the Sunne setting, the houres and minutes found in the Table, and that is the houre of her setting.

Then after the full for her rising do thus, from the Sun rising take the houres and min. found in the Table, and the rest shewes the Moone rising, and from the hou. and min. of the Sun setting, take the hou. found in the Table, and the remainder is the Moones setting. But if you cannot take the hou. and min. found in the Table, out of the Sun rising, then adde 12. to the Sunnes setting, and then subtract the rest found by the Table, and that is the Moones setting.

Example.

The 9. day of February, the Moone is three dayes old wherewith I enter the Table, vnder the Title of Increasing, because it is before the full, and there I find two hou. and 24. min. in the middle of the Table: so I say the Moone shineth 2. hou. and 24. min. in the Euening, after the Sun sets, and the Sun setteth that way, at 5. a clocke, notwithstanding two houres and 24. minutes to 5. you shall haue 7. hou. and 24. min. so I conclude the Moone setteth the 9. day of February, at 7. a Clocke, and 24. minutes after. Then by adding 2. houres and 24. min. to 7. the time of the Sunnes rising for that day, you shall haue 9. and 24. minutes, so the Moone riseth at 9. a Clocke and 24. minutes, for noone. And thus for every day in the year.

If any Man be desirous to practise any of
these Arts following, let them repair
vnto the Author, where they may receiue
Instruction,

S Vrueying of Land with many vsuall Instruments, as Plaine
Table, Theodolite, Circumferenter, Geodeticall Staffe,
Familiar Staffe, Topographicall Glasse, and any other the like.
Measuring of all Solids, as Stone, and Timber, and the like
by the Foot.

Measuring of Superficious, as Glasse, Boord, Wainescot,
Paving, Seeling, and the like.

The making of all manner of Dyals, as declining, declining
and reclining, detlining and Inclining, cyther Geometrically,
or by Signes and Tangents, or by Logarithmes, or by Master
GYNTERS Rule, as also the making of all manner of Instru-
mentall Dyals.

The vse of the Globes both Cœlestiall, and Terrestriall,
with the vse of the Sphaere.

Navigation, Principles thereof, with the vse of all Nautical
Instruments, as Crosse Staffe, Astralabe, Sea-rings, Sea-qu-
drant, or the like.

Reducing of Plots, Maps or Charts to any desired proporti-
on, from a greater to a lesser, or from a lesser to a greater.

The description and vse of the Astralabes, by the which may
be wrought most of the principall points of Navigation, and
most of the chiefeft Conclusions that are to bee wrought by
the Globes.

Casting of Accounts, cyther with Pen or Counters, or with
out, by a Table invented by the Author.

These, with diuers other of the like Nature, you shall find the
Author ready and willing as a louer of Art, to instruct them so
farre as shall be needfull to the attaining of any of them,

Uult.

To the Reader.

THe Country men who till their land with paine,
Of vnkind seasons oftentimes complaine,
Sometimes they grudge, and say that too much wet
Their Haruest marres, and all their worke doth let:
Another while they murtheringly reſolue
To plow and ſow, and all for lacke of raine:
Again they cry through ſnow, and haile, and froſt,
They doubt their Cattell will be many loſt,
And euery yeere they thinke the Proverbe's true,
Bad was the old, but worſer is the new.
But if you'l giue me leaue to ſpeake, Ile tell
You how all this, and more ſhall be repell.
Leaue off to ſin, your graſſe full well ſhall grow,
And times ſhall ſerue to ſow, and reape, and mow:
Your Cattell ſhall encrease and multiply,
And all things ſhall goe well: for certainly
“A fruitfull Land made barren by the ſin
“Of the Inhabitants that dwell therein.
Therefore (in time of wet) if you will ceaſe
To powre out ſin, and with God make your peace,
The ſhowres ſhall ſtay, or if ſo be through lacke
Of raine, the hungry earth ſhall rend and cracke,
If ſhowes of teares to God you will ſend out,
Sweet dewes of raine he'll ſend you without doubt.
Or if froſts make your land as hard as ſteele,
Whereby your Cattle ſhall much hardſhip feele:
If you from off the dregges of ſin will thaw,
And of your Maker will but ſtand in awe,
In ſtead of froſt ſhall pleaſant weather be,
And all things ſhall well with your minds agree.
Now, gentle Reader, whether farre or neere,
Farewell vntill the next enſuing yeere.

Your aſſured friend

John Smith.

Note that the Epact changeth the first of March,
And the Golden number the first of Ianuary,

March hath xxxi. dayes.

Now humours ill begin to spring,
And baths are good, and blood letting.
Or Pills, or Potions, must shew take,
Thy breach of Nature vp to make.

the yeare of our Lord, upon the 25. day
of March.

Smith. 1631.

A Description of the Foure quarters of the year.

Winter ☉ in ♊. 3. 8.

VV Inter Quarter Astronomically began the last year 1630. upon the 11 day of December, at 31 minutes past 11 at night, at which time the Sunne entred into the first minute of the Equinoctiall tropicall signe Capricornus: And doth continue untill Thursday the 10 day of March this year 1631. In which time the eye of the world, the Sunne maketh his progression through these 3 decrepid signes, Capricorne, Aquarius, and Pisces.

This quarter is by nature moyst and cold,
And is compared to a man that's old

Spring, ☉ in ♈. 8. II.

The Vernall or Spring quarter taketh his beginning upon the 10 day of March being Thursday, at 6 a clocke at night, at which time the Sun entred into the first minute of the Vernall Equinoctiall signe Aries making the dayes and nights of equall length throughout the whole world, and produceth (to vs that live vnder the North Pole of the

A Prognostication.

Equinoctiall) the comfortablest and pleasantest quarter of all the yeare : being the fittest time to vse the helpe of Physicke, and Phlebotomie, to remoue sicknesses or diseases, which haue continued long. This quarter continueth vntill Saturday the 11 of June, in which time the Sun passeth through through these three signes, Ariés, Taurus, Gemini.

This quarter is by nature moyst and hot,
Like to an infant, that ere while was not.

Summer, ☉ in ♈, ♉, ♊.

The Estiuall or Summer quarter, taketh his beginning vpon Saturday the 11 of June, three minnts after 9 at night, at which time the Sunne is mounted as nere as he can to our Zenith, and hath taken entrance into first minute of the Estiuall sollicitall signe Cancer, producing to vs the longest day and shortest night : it continueth butill Wednesday the 13 of September. In which space the Sunne passeth towards the Equinoctiall, through these three signes, Cancer, Leo, Virgo.

This quarter is by nature hot and dry,
Like a yong man, whose blood with heate
(doth fry.

Autumne ☉ in ♋, ♌, ♍.

The Autumnall quarter or fall of the leafe (as it is vulgarly called) beginneth vpon
Saturday

Smith. 1631.

Saturday the 13 of September, 39 minutes after high noone, at which time the Sunne entereth into the first minute of the Autumall equinoxia l signe Libra, making againe an equall vicissitude of day and night: It lasteth untill the 12 of December next, in which time the Sun passeth througħ these 3 signes Libra, Scorpio, S gitarius.

This quarter is by nature cold and drie,
Like middle age, which to grow old doth hie

Of Eclipses this year 1631.

Four times this yeare shall the two great Luminaries of Heauen, viz. the Sunne, and Moone be Eclipsed or suffer losse of light.

The first Eclipse will be of the Sun, vpon the 21 day of Aprill 9 minutes after 9 of the clocke in the morning: hee will bee darkened vnto the quantatie of 4 digitts, by reason of the Moones south Latitude, it will not bee visible in our horizon: but it will be conspicuous to the Inhabitants in the Straights of Magellanica, and vnder the Meridian of Cambaie, in the kingdome of Asia.

The second Eclipse will be of the Moone, vpon the 5 day of May, at 7 at night.

The beginning at 5. ho. 12. mi. afternoone.

The midst of darkeneste at 7. ho. 2. mi.

The

A Prognostication.

The end of the Eclipse will be at almost 9

The totall duration 3. ho. 39. mi. 54. sec.

The diget 502 points eclipsed 21--21' 57"

Where in England shall not see the beginning of this Eclipse, for the Moone will not be risen, nor the Sunne set, untill 12. mi. after 7. at which time she will be somewhat the middle of true opposition.

The third Eclipse will be of the Sun, upon the 15 of October, at 5, and 24 min. 40 sec. in the morning, and will be visible in our horizon, but be seene apparently unto those that inhabit in the uttermost parts of Asia, toward the east, in the country of Cathaia, and the mountaines of Belgia, under the great Cham, and in the regions adjoining thereto, &c.

The fourth Eclipse will be of the Moone, upon the 19 of October at 11 at night.

The beginning of darkenesse at 8 ho. 40. mi.

The midst of darkenesse at 11.

The end of the Eclipse at 1.

The totall duration of this Eclipse from the beginning to the end, will be 4 ho. 17' 6"

The eclipsed parts of digitts 19-48' - 45"

¶ The time of Change, Fulls, and quarters of the Moone; and an Abstract for each Month.

January.

Full Moone 8 day at 5 in the morning.
Last quar. the 14 day 28 min. after 11. at ni.
New Moone the 22. day 22 m. past 6. mor.
Last quar. the 30 day, 46 m. past 9 at night.

The Abstract.

The mould from off your fruit tree roots vpreare,
and prune and dresse them, they more fruit will beare;
Cut downe your timber, houses for to build;
now turne youi gardens, more fruit will yeld.
When summer comes, and now tis not to soon,
to geld for rearing: but obserue the Moone.

February.

Full Moone the 6 day 54 mi. past 4 at night
Last quar. the 13 day 41 min. past 8 in the m.
New moone the 20 day, 22 m. past 11 at night.

The Abstract.

Now is the time to sow your beanes and pease;
or let hearbs, in gardens if you please.
Good husbands also in the field doe walke,
with paddle for to breake the water balke.
Which marrs the corne, and yet tis good to plant,
quicksets, and roses, if so be you want.

March.

First quar. the 1 day, 56 mi, after 3 in the m.
Full

A Prognostication.

Full moone the 8 day, 40 m. after 3 in the mo:

Last quar. the 14 day, at 7 a clocke at night.

New moone the 22 day, 24 mi. past 4 at ni.

First quarter the 30 day, at 6 at night.

The Abstract.

The roots of trees you heretofore made bare;

to couer or'e with mould, now haue a care:

'Tis good to plant, both apple, plum, and pear,
and land for barley, with your plow to teare.

Sow pease, beanes, oates, cucumbers, mellens, sage,
artichokes, parsnips, onions, for this age.

Aprill.

Full moone the 6 day, 10 m. past 11 in the m.

Last quar. the 13 day, 47 m. past 6 in the mo:

New moone the 21 day, at 9 in the morning.

First quar. the 29 day, 6 m. past 4 in the mo:

The Abstract.

Sow barley now in land that's strong in heart,

Flaxe seed, and hempe, vnto your impart;

Set garden hearbs, and harken to your bees;

this moneth and the next, let tanners barke their trees.

May.

Full moone the 5 day, 7 mi. past 7 at night.

Last quar. the 12 day, 23 mi. past 8 at night

New moone the 21 day, 38 m. before 1 mo:

First quar. the 28 day, 13 mi. past 11 before

none

The

Smith. 1631

The Abstract.

Now is the time to stirre for Wheat and Rie,
and sow such hearbs as frost would cause to die.
As mari ram, and basil, sauiory, time,
for setting hearbs, tis counted now the prime.

June.

Full moone the 4 day 14 m. past 3 in the mo.
Last quarter the 11 day, at none al most.
New moone the 19 day, 37 m. past 1 afterno.
First q. the 26 day, 32 m. past 4 afternone.

The Abstract.

Fetch home your fuel, grasse beginne to mow,
set gillow flowers, and lettrise seede, yet sow;
Rose, and hearbs, within this moneth distill:
and weede your corne, and sheare sheepe if you will.

July.

Full moone the 3 day, at a little past high none
Last quarter the 11 day, at 5 in the morning.
New moone the 19 day, at 1 in the morning.
First qu. the 25 day, 35 min. past 9 at night.

The Abstract.

The choyest hearbe that thou canst picke and cull,
gather and dry i'th shade, the moone at full:
Take heed: of suaine heate and colds for they,
will quickly bring the body to decay.
Good husbands now doe labour with the Ant,
'gainst winrer comes who'e liuery is want.

August.

Full

A Prognostication.

Full moone the first day, at 10 at night.

Last quarter the 9 day, at 10 at night.

New moone the 17 day, at 35 min. past 10 before noone.

First quar, 23 day, 34 m. past 3 in the moz.

Full moone the last day, 14 min. past noone.

The Abstract.

Make hast and rid your meadowes now of hay,

least Neptune come, and sweepe it allaway:

Reape Wheat and Rie, and stirre your land for Wheate,
those that are idle now, let them not eate.

September.

Last quar: the 8 day 8 min: past 5 at night.

New moone the 15 day, 46 m. after 7 at nig.

First quar: the 22 day, 36 m. before noone.

Full moone the last day, 22 min. past 4 in the morning.

The Abstract.

Is hauest ripe? toger it in be bold;

sow wheat, and rie, in land that's strong and cold:

Crabbs, Apples, Peares to gather, be not wearie,

they'll yeeld these liquors, veriuice, cider, peary.

October.

Last quar. the 8 day, at 9 before noone almost

New moone the 15 day, 10 min. past 5 moz.

First quar: 21 day, 25 mi: after 10 at night.

Full moone 29 day, 51 mi, past 10 at night.

The

Smith. 1631.

The Abstract.

Sow wheat and rie, the weather being faire,
the Moone increasing in a pleasant ayre;
Remoue yong trees, as plum and pare, and apple,
rose, bay tree, filberd, oke, elme, ash, and maple.
Gather your winter fruit, to keepe in store,
The prouerb still is true, store is no sore.

November.

Last qu: the 6 day, 19 min: past 10 at night.
New the moone 13 day, 14 min: past 3 after
noone.

First qu: the 13 day, 6 mi: past 1 after noone
Full moone the 21 day 7 mi: past 6 at night.

The Abstract.

The roots of Apple trees, this moneth vncover,
so let them rest till March, then spread earth ouer:
Set crabtree stocke, remoue trees as before,
in the last Moneth; and now make malt for store.

December.

Last quarter the 6 day, at 10 before noone.
New the 13 day, 11 mi: after 2 in the mo.
First q: the 20 day 41 mi: past 7 in the mo.
Full moone the 28 day 21 min: past noone.

The Abstract.

Timber to build this moneth t'is good to fall
to following land, for barly time doth call
(The weather not to hard) sow beanes & pease
Apple tree roots vncover, if you please;
Good diet, let thy chiefest phisicke be,
inuite the poore to dine, & sup, with thee

¶ To know what a clocke it is, in the
day time, by your hand.

TO find how th'day doth passe away
byth' lines in the left hand;
I'le shew a way how that you may
it quickly vnderstand.

In winter time your hand hold plaine
turne to the Sunne, your face

But in the winter time againe
your backe the same way place,

Vntill the muscle of the thumbe
doth giue a shaddow rise,

That you may see it euen come
vntill the time of life.

The index of this diall is,
a rush or any spray :

The length whereof doth neuer misse,
of the fore finger aye.

Which must be placed in such sort,
'twixt forefinger and thumbe :

It must not leane, nor be to short,
but vpright as a plumbe.

The places which the houres shew,
in brieft I will declare :

Fore fingers end full well I know,
makes 5 and 7 bare.

Both 6 and 6 long fingers end,
doth very plainly tell;

And

Smith. 1631.

And 7 and 5 ring fingers end,
doth shew you very well.
And 8 and 4 eare fingers end,
doth shew you to a poynt :
And 9 and three their time doth spend;
on th'same fingers first ioynt.
The second ioynt assuredly,
both 10 and 2 doth claime :
To th'third 11 and 1 doe hie;
to shew that time certaine.
And 12 to chuse his place is bold;
on th'line of generation :
Thus euery houre his place doth hold;
by th'index true relation.

*To know what a clocke it is in the night by the
moone. shining upon a Sundial, and to know how
long she shineth, and when she riseth and setteth,
by the Table following.*

Seeke the Moones age in the fourth col/
lumbe of the Ballender, with which
number enter this Table, vnder the title,
The Moones age for Southing, answering
to

A Prognostication.

The moones age for Sou- thing.	The moones comming to South.	The age for Su- thing.	The C
day.	day	daies.	daies
1	16 12	48 1	29
2	17 1	36 2	28
3	18 2	24 3	27
4	19 3	12 4	26
5	20 4	0 5	25
6	21 4	48 6	24
7	22 5	36 7	23
8	23 6	24 8	22
9	24 7	12 9	21
10	25 8	0 10	20
11	26 8	48 11	19
12	27 9	36 12	18
13	28 10	24 13	17
14	29 11	12 14	16
15	30 12	0 15	15
da. ●	da. o.	mi. da.	da.

to which un-
der the title:
The Moone
comming to
South, you
haue y^e houre
and minute
of southing,
and note that
all the in-
crease the
commeth to
South after
noone, and
all the de-
crease, the
commeth to
south in the

morning.

Now to know what a clock it is vpon a sun-
diall. & see what a clocke it is by the shadowe
of the moone, noting how much it wanteth or
is past 12 of the clocke, soe so much it want-
eth or is past the houre of her comming to
south that night.

Example.

Upon the first day of January at night you
would know the houre of the night, and look-
ing in the fourth collame of the kalender, you
find

And the Moone to be 9 dayes old, with which number entering this Table, under the title The moones age for southing, you finde the moone cometh to south at 7 a clocke and 12 minuts, and looking vpon a sundiall, the Shade falleth vpon 2 a clocke afternone, which is 2 houres past 12, therefore 2 hou. past 7 a clocke and 12 minuts, viz. 12 min. past 9.

Now to find how long the Moone shineth, and when she riseth and setteth, thus doe: find the age of the moone vnder the tile The Age for shining, then answering thereunto, shall you see the houres and minuts of her shining in the euening, and after the full she shineth before the Sun riseth in the morning, so many houres as the table sheweth, and for the rising and setting thus doe, whiles the moone increaseth add to the quantity of her shining the houre of Sun rising, so haue you her rising; the same quantatie add to the time of Sun setting, so also haue you her setting.

But after her full take the quantity of her shining from the sun rising, and you haue her rising: the same also take from sun setting sheweth the time of her setting, and if subtraction cannot be made, borrow 12.

Example

A Prognostication

Example.

The first day of January the moone is 9 daies
old, wherewith entering the table under the title,
The moones age for shewing: you finde answer-
ing thereunto 7 houres 12 minutes, which shew-
eth that the moone shineth that night after sunne
set 7 12 minutes, and the sunne riseth the same
day 4 minutes after 8 a clocke, which added to 7
houres 12 minutes, maketh 15 houres 16 min.
from whence subtract 12 (which is none) and
there remaineth 3 houres 16 min. which shew-
eth that the moone shall rise that day 16 min past
3 in the afternoone, and the same day the sunne
seth at 3 a clocke and 56 min. which added to
7 hou. 12 min. maketh 11 hou. 12 min. which
sheweth that the moone will set that night at 12
min. past 11 a clocke.

C

The

The Geographical description of
waies from one notable Towne to another,
ouer all England, and thereby how to trauele
from any of them to the Citty of Lon-
don: set forth by a new
order.

Note that the figures in the towes vnder this mark,
* is the distance off that Towne they stand against,
from London, or from the Towne you are directed vnto.

From Yorke to London, is 150. Miles.

Go first to Tadcaster, which is 8 miles.

		miles *				miles *

Chang. 1631.

A Prognostication
for this yeere of
Grace. 1631.

O R

A briefe declaration of the
Aspects of the Moone vnto the
Sunne, presages of the Variation of the
Winds, and the inclination of the
Weather, according to the Influ-
ence of the cœlestial constel-
lations, and the experimented
observations of the Anci-
ent Writers.

Also particular elections of such Nego-
tiations as sympathize or concur with
the configurations of the Planets
in the seuerall and daily Man-
sions of the Moone.

With many other necessary Observati-
ons and profitable Rules for Physicians, Chi-
rurgians and Husbandmen.

Printed at London for the Company
of Stationers. 1631.

A perfect Table, containing the beginning and ending of the 4. Termes, daies of Effoyne, daies of Excep- tion, Returna breuium, and daies of Apparance.

**A bricfe Discourse of yeeres, moneths,
weekes and dayes.**

The Iulian yeere begunneth the first of Ianuary.
The Gregorian yeere begunneth the 1 of our Decemb.
according to eicher account they containe 365. da.
The Church of England in law cases begins Mar. 25.
The yeere of the Kings reigne begins March 27.
The States of Florence, Siena, and Pisa, March 25.
The Empire (as the Iulian) the 1 of Ianuary.
The Church of Rome on the 25 of their Decemb.
The Egyptians and Persians the 18 of our Iuly.
The Arabians and the Inhabitants of Asia Septem. 13.
The true Solar yeere begunneth at the vernal equi-
noctial, & containeth 365 daies 5 houres and 50. m.
The Sydereall or Starry yeere begunneth when the
Sunne entereth the first minute of V, & containeth
365 daies 6 houres, and 6 minutes.

Of Moneths.

The Moneth Solar is the continuance of the Sunne
in one signe.
The Moneth of Apparition is 28 daies or 4 weeks.
The Moneth of Paragratiō is 27 daies and 8 houres
The Moneth of Consecutiō is from new Moone
to new Moone.

The weeke begunneth on Sunday morning about
midnight: so that our Sunday is the first day of
the weeke, & is called by reason of the glorious re-
surrection of our Lord and Saviour Iesus Christ
on that day) the 1. ords day.

Of a Day.

Day artificiall is the time from Sunne rising to
Sunne setting: and the night is from Sunne set-
ting to Sun-rising.

Day naturall is the time of 24 houres, it begins
with vs and the Romans at midnight.

A plaine declaration of the change, full, and
quarters of the Moone, the month, day, houre,
and minute they doe happen vpon for this
yeere 1631.

Not that (a) signifieth before and (b) after noon

Certaine predictions of the weather in eue-
ry Moneth: with necessary Abstracts, and
the poetickall rising of the Starres.

January.

New yeeres day in the morning being red, por-
tends great tempest and warre, after ariseth O-
rions girdle vespertine, troubling the ayre, cau-
sing South-west winds, the 10. and 11. day doth Lu-
cida Corona produce by a vespertine setting much
raine: about this time also riseth Asellus and Præ-
sepe, great causers of raine, the more iupiter being in
moist signes: the 12 day Asellus riseth colmicall, the
13 Præsepe setteth colmicall, the 20 day the South
part of Asellus riseth chzonicall, the 28 Syrius riseth
vespertine, the 30 day the Eagle riseth colmicall. All
which (as Ptolomæus) bring wet and tempestuous
weather. Some say, if the Sunne shine the 10 day
of Ianuary, there shall be much winde: others prog-
nosticate of Saint Pauls day, saying, if the Sunne
shine, it is a token of a happy yeere; if raine or snow
indifferent; if misty and darke, great death: but if it
be stormy with any noyse of winds or thunder, then
will there be many tempests and great mortalitye
that yeere.

The Abstract.

Cut timber, rid fruit trees of superfluous branches,
vncouer their roots, drench weake and sicke cattle,
sine with Meriace, Hozes with water and ground
Hault, sodden with a litle bzian: digge Gardins,
libbe and geld for rearing.

A Prognostication.

February.

The 3 day Regulus riseth chonicall and setteth colmicall the 4 day: of whom Ptolomeus saith, the cleare starre in the heart of the Lion beginning to set, the Northwinde bloweth with often vaine: Cardanus saith, it raiseth the Southwest winds: the 2 day the talle of the Dolphin setteth vespertine, which Poet saith, bringeth winds and snow and the more raine the windes being South: some say thunder vpon Shouetuesday, sozetelleth winde and stoze of fruit, and plenty, the sunns beames being carely abroad: others affirme, that so much he shineth that day, the like he shall shine every day in Lent.

The Abstract.

Sett, cut, and lay quicksets and roses, sow Beanes and Pease, the land being cold and drie, furnish your Gardens with sallads for summer.

March.

The 6 day Vindemiator riseth vespertine, bringing Northwindes with frost: the 8 riseth the Ramshorne, producing haille, snow or raine, the 10 day Arcturus riseth chonicall, causing tempests: Cardan saith at the vespertine rising of this starre, Swallowes be seen and the Spring commeth. Senlus saith, that at the evening setting of Arcturus, Swallowes depart by multitudes, and at his vespertine rising they come againe: and this rising bringeth Southwest winds, and by West, blowing commonly 12 daies with raine or haille, ending in the West: the 11 or 12 day the Sunne entering into Aries the West winds blow, and the Drookes come: the 11 Spicavirginis setteth colmicall cloudy: some say so many milles in March, and

to many beare frosts after Easter.

The Abstract.

Now regarding winds and weather, graft, also open the roots of your trees opened in December or January, with ranke earth: sow Pease, Beans, Oats, Parsneps, Onions, Bittchokes, Cucumbers, Mays and Mellons: manure Barly land, but in cold clay ground sow at the end of the moneth.

April.

The 17 day of April, Augustus terminus Pleiadum, one of the seaven Starres, riseth colmitall: the other following a little after, causing West winds: the 22 the South part of Lucida lancis setteth colmitall, often prouoking showres of raine: some say, if it raine upon Ascension day, which sometimes (although not this yeere) falleth in April, is both betoken scarcity of all kinde of food for cattell; but being faire, it signifieth plenty.

The Abstract.

It is yet a convenient and good time to sow Barly, chiefly in strong land, some kinde of garden seed is sow now also, as Mellons, Citrons Cucumbers, and Bittchokes; sow likewise Hemp and Flaxe, setting some garden hearbs towards the end of the Moneth: now the time beginneth to be good to barke trees, and to yeeld to good daymen natures abundance.

May.

The 4 day of May, Sirius or Canis Maior setteth beforetine, producing tempests from the South and Northeast and by North; and as Scadius saith, if the

A Prognostication.

February.

The 3 day Regulus riseth chronicall and setteth cosmically the 4 day: of whom Ptolomeus saith, the cleare starre in the heart of the Lion beginning to set, the Northwinde bloweth with often rains: Cardanus saith, it raiseth the Southwest winds: the 9 day the talle of the Dolphin setteth vespertine, which Peck saith, bringeth winds and snow and the moze rains the windes being South: some say thunder vpon Shrouetuday, sozetelleth winde and stoe of fruite, and plenty, the sunne beames being carely abroad: others affirme, that so much he shineth that day, the like he shall shine every day in Lent.

The Abstract.

Sett, cut, and lay quicksets and roses, sow Beanes and Pease, the land being cold and Rife, furnish your Gardens with sallads for summer.

March.

The 6 day Vindemiator riseth vespertine, bringing Northwindes with frost: the 8 riseth the Rams horne, producing halle, snow or raine, the 10 day Arcturus riseth chronicall, causing tempests: Cardan saith at the vespertine rising of this starre, Swallowes be come and the Spring cometh. Serlius saith, that at the evening setting of Arcturus, Swallowes depart by multitudes, and at his vespertine rising they come againe: and this rising bringeth Southwest winde, and by West, blowing commonly 12 daies with rain or halle, ending in the West: the 11 or 12 day the Sunne entering into Aries the West winds blow, and the Showres com: the 17 Spica virginis setteth cosmically cloudy: some say so many milles in March, as

So many hours frosts after Easter.

The Abstract.

Now regarding winds and weather, graft, also now
 the roots of your trees openeth in December or Jan-
 uary, with ranke earth: sow Beane, Peas, Oats,
 Parsneps, Onions, Bittchokes, Cucumbers, Mays
 and Mellons: manure Barly land, but in cold clay
 ground sow at the end of the moneth.

Aprill.

The 17 day of Aprill, Augustus terminus Pleiadum,
 one of the seven Stars, riseth colmicall, the other
 following a little after, causing West winds: the 22
 the South part of Lucida lancis setteth colmicall, of-
 ten pioushing showers of raine: some say, if it raine
 upon Ascension day, which sometimes (although not
 this yeere) falleth in Aprill, is both betoken scarcity
 of all kinde of food for cattell; but being faire, it sig-
 nifieth plenty.

The Abstract.

It is yet a convenient and good time to sow Bar-
 ly, chiefly in strong land, some kinde of garden seed
 sow now also, as Mellons, Citrons, Cucumbers, and
 Bittchokes; sow likewise Hemp and Flaxe, setting
 some garden hearbs towards the end of the Moneth
 now the time beginneth to be good to barke trees,
 and to yeeld to good daymen natures abundance.

May.

The 4 day of May, Sirius or Canis Maior setteth be-
 ginning, producing tempests from the South and
 Northeast and by North; and as Scadius saith, if the

A Prognostication.

full Moone happens within 2 daies before or after
(as this yeere it doth) it prognosticates blasting to
corne and other flowres and fruits: the 6 and 7 daies
Hyades begin to set, the South blowing with raine:
so Ptolomeus speaketh of the setting of the 7 Starres.
The 9 day Pleyades set chioniscall, causing South
winds and raine: the 11 the Bulls-eye setteth: the 18
Procyon setteth heliacall, making wine rage in cel-
lars, dogges runne mad, and many other strange al-
terations: the 23 the Eagle riseth chioniscall which
happening neere the new or full moone (as now it
doth) all fruits be hurt with Wormes and Cater-
pillers, as Cardanus saith: the 24 day the 7 Starres
rise colmicall: the 27 the Bulls-eye riseth colmicall,
both which foretelle raine and hurt to vines: some
say the Sunne shining vpon the 25 day, wines shall
prosper well, also in the end of May, if Vales begin
to beare blossoms, it betokeneth much tallow and
fruit.

The Abstract.

In the beginning you may sow Barley, set and
sow tender beards and seeds, as Sweet Marigold,
summer Sausurrie, Basil, &c. set Stills to worke
vntill May dew therein, &c. land for wheat and Rye.

June.

The 6 day the lesser Dogge setteth vespertine, which
happening neere the full Moone (as now it doth)
hurts all frutes: Stadius saith, if it happen at full
Moone it bringeth infection to sweet flowres and
vines, by reason of his burning heate: the 12 ☉ as-
cends into Cancer, making Vines and Olives flourish:
the 16 day Arcturus setteth colmicall making the ayre
thick.

Intemperate: the 21 the left Side of Orion riseth col-
micall, raising the West windes: if it rains the 24 day
haskell nuts dos not prosper.

The Abstract.

Set Gilliflowres and Rosemary, sow Lettice 3 or
4 dayes after the full, which is also good from Febru-
ary to the end of September; Sheere Sheepe, fetch homie
finell, and towards the end of the moneth beginne to
mowe.

July.

The second day riseth Orion: girdle, and is a criti-
call day, for if it raine this day it doth continue so of-
ten for 4 weekes. Stadius saith, that if Iupiter be aspe-
red with Mars, Mercury or the Sunne at this rising,
great tempest is portended at the rising of the great
Dogge, and foresheweth North=East winds, and by
North, corruption of the aire with the rising of the
Etesian winds: the 13 day Lucida corona setteth chro-
micall: the 22 the North part of Asellus setteth vesper-
tine, at which time with Ptolmeus the North=East and
by=East windes blow, as foze=runners of the Etesian
winds. Cardanus saith, that these winds, as foze=run-
ners of the rising of the Dogge, blow eight dayes be-
foze, to which Stadius also agreeth: some say if it be
faire 3 sundates befoze S. Iames Day Cozne will be
good, but if wet, cozne withereth.

The Abstract.

At the full Moone gather flowers and seeds, and
let your flowers dry in the shade and not in the Sun,
for the Sun draweth away their vertue, but to avoid
corruption, befoze you take them away let the Suns
beate be upon them a while, take heed of sudden colds,
for

A Prognostication.

for nothing sooner breedeth the plague, and then
for to drinke being hot in naught. It were vaine to
tell good husbands that it is notable for them to be
Medowes, and elsewhere to provide for winter, and
therefore I will commend this time to idle and slop-
gish persons.

Labour in Summer take paines with the Arte,
Else in the winter, live cold and in want.

August.

The first day of August, the great Dogge riseth
cosmicall. Cardanus saith, at the rising of this Starr,
all living creatures be troubled, and that it is scarce
possible that disease and sickness should not be. Sta-
dius recounts more enormities, as troubling of men
in cellars, dogges going madde, surges of the seas and
waters, death of fishes with extremity of heats, espe-
cially if Mars or Iupiter be in fiery signes. Diaphanes
saith, if at the rising of the Star in the Spout be in A-
ries, it doth presigne raine and tempest: in Taur-
us, in Gemini pestilence, in Cancer disease, in
Leo burning heats, in Virgo much raine and many
showres, with untimely birth of children; in Lib-
ra great disease, in Scorpio plagues, in Sagittarius raine
and tempest, in Aquarius drought and sickness, in Pis-
ces raine to ensue: but these Stadius saith be
knowne vnto him for experimented truths, for he
holds them more substantiall, that be taken, ex
commixtionum causis: the 7 day the Eagle setteth
cosmicall, the Southwest, and by West winds blow-
ing with great heats. Cardanus saith it raiseth the
Ethiopian winds, which as Ptolomeus saith continue
dayes: the 8 Regulus riseth cosmicall, raising North-
east and by North winds: the 13 day the great Dogge
riseth

setteth Bellacall; which limits the beginning of the
Græcian yeere, and of this rising be divers observati-
ons; if then the heauen be cloudy and darke, it signi-
feth a heavy time with plagues, but being faire and
clear it is good. Also the 13 of August the Dolphin
setteth cosmicall, bringing rafne and moist weather.
the 14 is Bartholomewes day, if the windes change not
the following night, the vulgar hold it good; Stadius
reports, tempests with hails to come from the West
and North-west part in the end of August, which often
doe hurt.

The Abstract.

Reape Wheate and Rye, some winter hearbs in
the new Moone: stirre land for Wheate and Rye, and
about the end of the moneth sowe with Vates, as
before, according to the goodnesse of your soyle: looke
moys in Iuly.

September.

The first day of this moneth is criticall: if it doe
not raine then, the rest of Autumne is like to be dry:
the 12 day Arcturus riseth cosmicall, and produceth
raie: and with Prolomus after: dayes Swallowes
leane to be seene: the 13 day is equinoctiall, windes
from West and North-west, the 17 Lucida corona riseth
cosmicall, windes turne troubling the seas with win-
tery weather. As many dayes old as the Moone is
on Michaelmas day, and so many floods will happen
that winter. If this rule be true there will be 14
floods this winter following 1637.

The Abstract.

Cut downe your Lent-rising, gather the fruits of
your trees, converting them to use, as Crabbes for
Marrines, &c. About the middell of the moneth some
Wheate

A Prognostication.

Wheate and Rye in cold and strong land: sowe winter Barleyes, and Carrets, &c.

October.

The 15 day the Dragons taylor setteth vespertine, after this day expect this winter but winters weather, farewell temperate warmenesse: and therefore the Germans call it den balen Sommer: the 11 the East winds blow, the 16 the left foot of Orion setteth with the 12 degrees of Scorpio, causing often great raine: if leaves now hang upon the trees, some say, it portends a cold winter, or many Caterpillers.

The Abstract.

Sowe Wheat and Rye, the sooner the better, for feare of raine: the new Moone maketh a fit time to set and remove young trees, as the Plumme, Pear, Apple, and Bay tree, so set Huts, Ackmes, and after the full Moone gather your winter fruits.

November.

The 4 or 5 day, the Scorpions heart setteth vespertine, which with Astrologers is a criticall day: the 5 day the Dogge setteth bringing raine and much wet, the like doth Orion produce which setteth about this time, the 8 day Saccule or Hyades set cosmicall, frost or raine: the 10 the Pleides set cosmicall: if then the heauen be cloudy, it denunciates a wet winter; if dry, a sharpe winter: the 14 Acturus setteth heliacall, causing much raine, as saith Cardanus.

The Abstract.

The time is apt to make Malt, to kill Bakens, to cut Ihes, to sow if you were to late the last moneth, to set Crab-tree Stocks, to remove trees, as in the last moneth in the encreasing of the Moone: but in the

Neue. 1631.

beside set Beanes, Pease. Also now uncover the roots of your Appletrees, and so let them rest untill March.

December.

The 6 day of December is dies Nicholai, of which Cardanus thus saith; Proximi septem dies a bruma cotidemque ante, raro ventis infestantur: they be called Halcyon dayes for their calmes and fairenesse of temperature and tranquill weather. The 16 day Arcturus that faire starre, setteth bespertime, and then the South winds blow and produce raine.

The Abstract.

The time is good to fall timber, to uncover roots of Appletrees, to fallow land for Barly, to set Beanes, Pease, &c. the weather being not too hard: and now fowlers be busie with Lime-things, & other engines to take fowles: let a warme fire be thy bathe, the kitchen the Apothecaries shop, and good hot mead thy dyet, to which according to thy ability invite thy neighbour unto: therefore to conclude,

If thou be poore, and canst not feast at all,
Goe feast with such as shall to feasting call.

Diners signes gathered by long obseruations and confirmed by common and daily experience, to Prognosticate the inclination and change of the weather. And first of

Presages by the Sunne.

If the Sunne rise cleare not Serpented, if hee chase the clouds before him into the West, if at his rising there

there be a circle about the Sunne, and vantly equall
 away, if he be red at setting, all these signes fauor
 weather to ensue: but if he be serry red at his rising,
 if he shew pale and wan, if at rising he seme hollow,
 if red and blache clouds be about him at his rising or if
 his rayes be red both at his rising and setting, if his
 beames moorning or evening be contracted or short, if it
 raine at sun-setting, or his rayes looke darke or blacke;
 if at his rising his beames looke not bright and cleare,
 if before his rising the clouds gather like globes moou-
 ing not into the West, if a circle of clouds appeare
 encompassing the Sunne, if at his rising he cast his
 beames as farre off amongst the clouds, if he spread his
 beames before he be vp, if at his setting he be ouercast
 with a deepe mist: all these signifie wet, and of tenne
 tempestuous weather: also looke if the circle called
 Halo be blacke, for it signifies raine, and if it beake,
 expect winds from that part as the fraction in the cir-
 cle respecteth.

Presages by the Moone.

According to the Egyptians, if on the yfune day
 the Moone be faire and bright, it will be faire wea-
 ther, if red, windes, if dim and blackish foule weather,
 according to the old verse:

Pallida Luna pluit, rubicunda flat, alba serenat.

Marke the eyes of her hornes, when she is 5 waies
 old, if they be blunt it betokeneth raine, if sharpe
 pointed and upwards, windy weather, if the upper
 horne which bends forthwards be the sharper, then
 winds from that coast: if the nether horne be so,
 winds from the South: if the 4 day after the change
 she haue a red circle or Halo about her, expect windes
 and raine: if the one halfe of the full Moone seeme

clean

A Prognostication.

Clear and pure, faire weather; if red, winde; if blackish, raine; mists and clouds about the Moone haue the like effect: if the upper tip of the new Moone be blacke or cloudy, expect raine after the full: but the nether tip being so, raine before the full, and if this blacknesse be in the middle of the Moone, raine at the full, a circle about the full Moone, declareth winde from that part that the circle is most splendent: if her horns at her rising shew shorpe grosse and thicke then ordinarily, looke for raine plentifully, and that before long: if she appeare not before the winde, the West winde blowing withall, cold winter-like weather all that Moone.

Presages by the Starres.

Next vnto the Moone we may place the Starres: if the Starres seeme to shoot, winde from that quarter that Starre came from: the better the Spring and Summer, the better the Autumn: Autumns faire and dry, bringeth a windy winter, a circle about any of the other Planets, great snowes, if the constellation is called Praesepe or the manger, standing betwixt Aelli appeare not: though otherwile the ayre be cleare: soule winter-like weather: if the Northern of these Starres be hid, great winde from the South: but the other being hid, North-east winde.

Of the Raine-bowe.

If two Raine-bowes appeare, raine; a Raine-bow presently after raine, faire weather.

A Prognostication.

Prefages from Thunder and Lightning.

If in Summer there be more Thunder then Lightning, windes from the coast it thundered: but if the lightning exceede rather Lightning without Thunder betokene raine and Thunder if it lighten onely from the North-west, raine the day following; if from the North, windes from thence; if from the South, North-west, or full West, it lighten, especially in the night, winde and raine from those coasts; morning thunder, windes; but midday, raine.

Prefages by the Clouds.

If the rache ride apace in the Aire, windes from that coast they come, worse, if it come from the North or South: if at Sunne set the rache rides on both sides from-ward him, tempest, blacke clouds flying out of the West, raine at night; but from the West, raine the next day; if the clouds see like fleeces of wooll, many together in the East, raine so; or 4 daies after: when clouds see low, seeming to settle upon the tops of hills, cold weather ensueth, but the mountaine tops being faire and cleare, the weather will take up: if the clouds seeme charged, and yet loose white withall, which some call Cottons, by others white weather, haille is at hand: if mists come downe from the hills, or descend from the heavens, and settle in the vallies, it promisseth faire hot weather: mists in the evening shew a hot day on the morrow, the like when white mists arise from waters in the evening.

Predictions by Fires.

The fire burning pale, or keeping a husking noise;
 Keeping weather: if the flame of fire or candle,
 mount, winding or maling, as it were, windes eu-
 line: the like, if the candle goe out of it selfe, or bin-
 die or take fire with much shooe. Moreover, when
 you discern many sparkles gather together in the
 fire, knitting one to another, the coales hanging to
 the bottome of the pot newly taken off the fire,
 the fire eated in the embers, keepeth a splitting or
 sparkling from it; if the ashes upon the hearth cling
 together, or when the live coales shiner brighteer, or
 burneth more then ordinary: all these are tokens
 of rain.

Prognostication by Water.

If the Sea within the haven, after the departing
 of a flood in a low ebbe water be calme, and yet keepe
 a holle and a rumbling within, blinde: if it doe thus
 beles, cold weather and rain: if in a calme season
 the Sea stonde, or water bankes rebound or make a
 noise, great tempest, the like of the Sea to selfe: the
 fowles swimming above water, tell of cold wea-
 ther for many dayes: the Sea being calme, heaving
 and puffing up, sheweth there is great force of winds
 within her, which will shortly break out to a tempest.

Prognostications from Fishes and Fowles.

The Dolphins disporting upon the waves, fore-
 shewes winds: if they sing and dash the water thus
 and that way, and the Sea be rough, faire weather:
 the Cucke laughing and flying about the water, the

Cockles

A Prognostication.

Cockles or Winckles Bicking hard to the grasse, the
sea Sheecons thrusting themselves into the muddes or
covered with sand, the extraordinary croaking of
frogs, the low flying of Swallows, the chirping
of Sparrowes, the crying of Peacocks and Ravens,
the bathing of Crows, the stinging of Flies and
Gnats, the early dragging of sea-Mermaids, Gulls,
Wallards and Ducks, proaking their feathers, all
these foretell raine and winde: contrary, when wou-
ter-fowle gather together, and combats, or Cranes
make haste to flye to the middell of the land, or Cap-
mozants and Gulls forsaking the waters, or Cranes
soaring quietly aloft, or Crows or Ravens gaping
against the Sunne, are all tokens of faire weather:
but if the Hawlet cry, raine: Ravens crying one to
another, as if they sobbed or yered, clapping them-
selves with their wings, winde: but doing it by in-
termision of time, wet and winde: the late return-
ing home of Iackebirdes, hard weather: also the
wooking of the Spinner, the busle beaving of Gulls,
the appearing of Moxmen, Hennes resorting to the
rocks, covered with dust, the Ants busled with
egges, the Bees in faire weather not mandying
farre abroad, Wels heard further then ordinary, the
wallowing of Dogs, the alteration of the crowing of
the Cocke: all these beoken foule weather.

Prognostications of foure-footed Beasts.

The leaping and playing of Sheepe, and such
small cattell, shew alteration of weather: the crying
of Swine, Oxen and heales licking themselves
against the haire or holding up their nose and
lung into the ayre, Swine shaking hay or such like

Beasts; heards eating greedily, or licking their hooves
or suddenly mane here and there, all signify rain or
foule weather.

Prognostications from Wood, Stones, &c.

The beards of Trefoile looked rough against a tem-
pest, and the leaves thereof will stand Daring up, as
if it were afraid thereof, also if dishes or stones, Spo-
numents and such like sweat or be wet, if mainfcore
booles that wyne well, be stubborne to open, if Salt
dissolue in the Salt-celler, or any solid body sweate,
looke for great rains: the like is to be observed by the
often pissing of hogges.

If there be a rumbling noise or sounding in the
Mountaines and Forrests, or if the leaves of trees
shaker and play themselves, no winds stirring, all
shewell some change of weather: the like prediction
is gathered by the sight downe of Doylars and Thi-
bles, flying to and fro in the ayre: looke what is said
of the noise in Forrests, vnderstand the same here in
the ayre and in the ballies.

Astronomical Elections for Physicke and Chyrurgery, depending vpon the place and course of the Moone.

If the body be filled with naughty and superfluous
humours, they were it convenient for thes to draw
blood, so the heauens consent thereunto, and the
age agrees therewith, which being not circumspectly
weighed,

A Prognostication.

weighed, (it may be most dangerous to the patient) but when necessary vergeth, as for the Pestilence, Pluerisie, Phrenisie, &c. then though the heavens deny, yet a veine is speedily to be opened ad xpi salutem: this considered, of Medicines, some be purgative, some comfortive, and others in the meane betwixt both. Medicines purgative be either solvendo or leniendo: in the first the Moone must be in Cancer, Scorpio or Pisces: for the other, the Moone must be taken when she worketh moze in moistnes then drynesse: being in a Δ or \ast with Mars, and you must take heed in the houre of giving the medicine, let the Moone have any aspect with Saturne, for he congreales the humour, making the medicine worke little, likewise let her be free from any aspect with Jupiter, for he is the friend of life, the helper and comforter of the vertues: for that the medicine can but weakely expell the humours, making the body affected with an evill quality: further in all purgative medicines observe the ensuing Rules.

[The Moone in Cancer in \ast or Δ with Venus, purge choller with electuaries, the Moone in Cancer in \ast or Δ of the Sunne purge phlegme with electuaries. The Moone in Cancer in \ast or Δ with Jupiter, purge the Melancholly with electuaries.

The Moone in Scorpio in a \ast or Δ with ζ , purge the chollericke with potions: the Moone in Scorpio in \ast or Δ of the Sunne, purge the phlegmaticke with potions: the Moone in Scorpio in \ast or Δ with Jupiter, purge the melancholly with potions.

The Moone in Pisces in * 02 Δ with Venus, purge the chollericke with pills: the Moone in Pisces in * 02 Δ with the Sunne, purge the phlegmaticke with pills. The Moone in Pisces in * 02 Δ with Iupiter, purge the melancholy with pills.

The Moone in \cap 02 Δ in * 02 Δ with \odot , purge the chollericke with any convenient medicine. The \odot in Libra 02 Aquarius in * 02 Δ with \odot purge the phlegmaticke with any convenient medicine. The Moone in Libra 02 Aquarius in * 02 Δ with Iupiter, purge the melancholy with any fit medicine.

But let not the Moone be in any of the Signes that chaunge the Cudd, as Aries, Taurus, Capricorne, for then the medicine will stay but a little with the patient, causing him to vomit, vntlesse you intend to purge by vomiting. Also in purging the melancholy, let not Saturne haue dominion, nor Iupiter in purging the sanguine 02 the liuer, nor Mars the chollericke, nor Luna the head, nor Mercury when you purge the lungs.

Rules for drawing of blood.

In letting of blood, you must consider what persons are fit to bleede, and what not, and if they be fit how it is with the patient inwardly; for his complexion, and age, and outwardly for the time of the yeere, time of the moneth, day, and diet.

For complexion.

For the phlegmaticke let the Moone be in Aries 02 Sagittarius when you draw blood: for the melancholy

A Prognostication,

in Libra or Aquarius: for the cholericke in Cancer or Mel-
cos: and for the sanguine in any of the aforesaid, Luna
signum membrum dominarus non peragranre.

For age let blood.

In youth from the change to the first quarter.

In middle age from the first quarter to the full.

In elder age from full to the last quarter.

In old age from the last quarter to the change.

For the time of the yeere.

The spring is best, harvest indifferent: the rest of
the yeere not convenient but upon occasion.

For the time of the month.

Let not blood 3. daies before nor after the change
the day before and after the conjunction of Saturne and
Luna, the like of the conjunctions of Luna and Mars let
not blood Venus and Luna in conjunction nor while Ve-
nus is combust. Let not blood the day before and after
the full Moon, nor a day before the conjunction of the
Moon with Saturne or Mars nor within a day after.

The Moon in any aspect with ♃ or Venus or the
☉ or ☿ with the ☿ or Mars is a good time to let
blood:

The time of the day.

The morning fasting is best, or in the evening after
perfect digestion, provided the aire be temperate, and
the winds not South: and after bleeding blood
violently.

Violent exercise, no sleeping, venery, or gluttony.

Elections for husbandry.

Before you plant or graft, consider the winde, for if it be in the North or East, cease thy laboꝝ. This obserued plant or graft generally the Moone encreasing in Taurus or Aquarius.

Remoue and set young trees in the last quarter, the Moone in Taurus or Capricorne, in September, October, November, and February.

Sow all kinde of Coꝝn the Moone increasing in S.

Set or sow all kinde of seedes the Moone well seated in Aries, Taurus, Cancer, Virgo, Libra, Capricorne, Aquarius, or Pisces, but with this obseruation, that your seedes whose rootes be round be sowne 3. or 4. daies after the full Moone. but for those, take the encrease from February to June. Gather fruites at the full. Sell Coppice in the first quarter, sheare sheepe in the encrease: and then cut haire to make it growe full and thicke:

Cutt vines in February, March, or September, the Moone encreasing in Aries, Libra or Scorpio: likewise cattell the Moone encreasing in Aries, Sagittarius, or Capricorne.

Wheke your land that the weedes may not growe thicke, the Moone decreasing.

A Prognostication.

Eclipses. 1631.

There will be 2. Eclipses of the Moone this yeere 1631: the first happeneth vpon the 5. day of May almost at eight in the euening the Moone being then in the 24. degree: and 6 minutes of Scorpio, it is a great Eclipse for the parts are 21 digitcs and thirtie one minutes.

The 2 Eclipse of the Moone will happen vpon the 29 day of October at eleven at night: the Moone then being in 15 degrees 52 firsts of Taurus neere vnto the ☊ the partes Eclipsed are 19 digitcs 48 minutes.

Ad maiorem Dei gloriam.

FINIS.

Scale. 10 ⁴⁷/₃ 1. 2465

An Almanacke, for the
yeere of our Lord God,
1631. 532-a

Being the third yeare after the 45th of
Leape Yeere.

Calculated for the Meridian and Paralell
the most famous University of Oxfor, the Po
Article being elevated 31 degrees 48 min. An
may serve for all great Britaine.

Wherin besides the Festiual dayes, are inserted
the name of many Martyrs with the yeares
wherein they suffered for the testimony of
the truth together with the setting of
Sunne for each day of the yeare as also the
Name, Founders, & time of the Foundation
of all the Colleges, and Halls in the
Vniversity of Oxford.

Notes for the Yeare of our
Redemption. 1631.

*Being the third yeare after Bissextill
or Leape Yeare.*

Wherein are set down sundry Tables,
Notes and Obseruations, Chronographically;
Astronomicall, and Physicall.

*Also, the nature and condition of the foure
Quarters of the Yeare: With the coming
to the South of many of the most no-
table Fixed Starres and time
of Eclipses.*

*Together, with the Names, Founders,
and time of the Foundations of all the
Colledges in the Vniuersity of
Oxford, with the surnames
of the seuerall Halls.*

By *William Beale Philomathist,*
Gentleman.

London Printed for the Company of
Stationers. 1631.

The beginning, continuance, and ending
of the Kings raignes since the Conquest
with the time how long it is since, to this
Yeare, 1631.

A Description of the foure Quarters of
this Yeare of our Lord Cod, 1631.

The Winter Quarter, *Sol in Capricorne,*
Aquarius, Pisces.

This Hyemall Solsticiall Quarter (usually called winter) did take his beginning vpon the xi day of December, in the precedent yeare, 1631 at v. of the clock and 15 minutes at night: The Sunne at that time entered into the first minute of that Solsticiall Signe Capricornus, making our shortest day and longest night to all vs who dwell on this side the Equinoctiall; and making the longest day and shortest night vnto all those that dwell on the south side of the Equinoctiall: The Sunne at that instant hauing attained to his greatest obliquity of south declination, viz. 23. degrees 31. minutes and 30. seconds, according to Icho Brahe, making our shortest day at Oxford to be 7. houres 31. minutes, and making our longest night to be 16 houres 28 minutes: The Sunnes Meridian hight 14. grades 41. minutes 30. seconds; and making his amplitude of rising from the East, South to be 30. degrees 54. minutes.

This Quarter (or Season) is of nature cold and moist, according to the flegmaticke Complexion, like to Old age.

A Prognostication.

The Spring Quarter,

Sol in Aries, Taurus, Gemini.

This vernall Season (according to our Astronomicall calculation) doth take his beginning the tenth day of March, at 14 minutes 36 seconds after five in the afternoone, the Sunne at that time entered into the first minute of the Equinoctiall or Equidiurnall Signe Aries, making the dayes and nights of equall length, twelue houres throughout the whole world, (the two Poles or points being excepted.) Bright Phœbus the Eye of the world, that royall bright Planet Sol, hath like a Giant run his race, and finished his course through the twelue Signes of that great Zodiacke Circle, making his true Meridian height to be 28. degrees 1. minutes at Oxford this tenth day of March.

This Quarter continueth vntill the eleuenth of June, and is of nature hot and moist, and doth resemble growing Youth.

The Summer Quarter.

Sol in Cancer, Leo, Virgo.

This Estiuall or Summer Quarter doth take his beginning vpon the eleuenth of June, at nine of the clock and 16. minutes at night; at which time the Sunne shall enter into the first minute of that Ecclesiasticall Signe Cancer, making his greatest declination or obliquity 23. degrees 31. minutes 30. seconds, according to Ticho Brahe, making our longest day and shortest night on the North side of the Equinoctiall; and making our longest day to be 16. houres 28. minutes, and our shortest night to be 7. houres 32. minutes. The

Sunne

Sunnes Meridian height being 61. grades :4. min. 30. seconds ; being within 28. grades 15. minutes 30. seconds of our Zenith ; and his amplitude to be 39. grades 14. minutes north.

This Quarter lasteth untill the thirtene of September, and is of nature hot and dry, like to the Choleric Complexion, or Middle age.

Of Autumne.

Sol in Libra, Scorpio, Sagittarius.

This Autumnall Quarter, (otherwise called Harvest) both take his beginning upon the thirtieth day of September, at 31. min. 45. seconds after high-noon : at which time the Sunne shall enter into that second Equinoctiall Signe Libra, making the dayes and nights of equall length. This Quarter lasteth while the Sun passeth through Libra, Scorpio, Sagittarius ; which lasteth untill the 11. day of December.

This Quarter is of nature cold and dry, of the Melancholy Complexion, like to Old-age.

Physicall Obseruation, and Blood-letting.

Certaine Elections from the course of the Moone and places of the Planets in the first columnne ; And first of Blood-letting. Let Blood at no time without great cause, for it weakeneth, and maketh way to many Diseases ; but if you doe, let it be done after good digestion, and fasting, in a temperate day, (the wind not south :) And afterwards, vse Meates of a light digestion. Abstaine from all exercises, as Bathing, watching, and Carnall copulation. And such like Persons as are not fit to bleed, are they that are under foureteene yeares, or more then fifty sixe yeares ; Also, they that are very leane, or very fatte.

A Prognostication

Elections.

Consider next, how it standeth with the Patient	inwardly	{	1 For his Complexion.
			2 Age.
			3 For the time of the yeare, and moneth generally.
			4 For the time of the day and niet particularly.
outwardly	{		

1 Complexion.

1 In the Complexion is to be considered, whether he be

{	1 Sanguine, that is, hot and moist.
	2 Cholerick, that is, hot and dry.
	3 Melancholick, that is cold & dry.
	4 Phlegmatick, that is cold & moist.

2 Age.

2 In his age, whether he be

{	In his Youth.
	In his Manly or middle age.
	In his Elder age.
	In his decrepitate or Old age.

3 The time of the Yeare.

3 Concerning the time of the Yeare.

{	The Spring time is best.	
	Haruest indifferent.	
	The rest of the Yeare bad, and to be blessed but upon necessity.	
	In the Spring-time, take Blood from the right side.	
		In the Autumne, from the left side.

The time of the Moneth.

Let not blood, the Moone being in ν . Π . η . μ . and ψ .
Three dayes before nor after the Change, or Full.
Twelve houres before nor after the Quarters,
The δ of ρ or ω with γ or π .

Beale. 1631.

The best Aspects for this purpose, are the \odot of the M with Iupiter or Venus.

The Trine, or U
Sextile of the \odot } It is good, and especially when
Moone with Q } that the Moone doth apply vnto
to Iupiter or Venus.

A Quadrat, or Opposition Aspect of U } It is very convenient
the Moone with Q } to be let
Blood.

The time of the moneth for U } Youth, from the Change to the first
Quarter.
Middle-age, from the first Quarter
to the full.
Elder-age, from the full to the last
Quarter.
Old-age, from the last Quarter to
the Change.

4 The time of the Day and Dyct.

The time of the day must be, cyther U } Morning after Sunne rising, la-
sting is best.
Afternoone, after perfect digestion,
prouided, the ayre be temperate,
and the wind not south,

Elections of Bathing.

Hot Diseases, the Moone in S or M or X , and in a
Enter into Δ or \ast of U or Q .
Bathes for Cold Diseases, D in V or Q or Q , and in a Δ or S
 \ast or J or \odot .
Cleanliness, D in X or X , or in a Δ or S or \ast of Q .

Elections

A Prognostication.

Elections of Husbandry.

Set, or most } Ground the } Decreasing.
low in } day } Moone } Increasing.

In Aries, Cancer, Virgo or Pisces, and in a Δ or * the
part of γ , or with λ or ρ .

Plant or Cast the Moone in Taurus or Aquarius.

Remoue, or set young Trees in the last Quarter of
the Moone, in October, November, December, Jan-
uary or February, in Taurus or Capricorne.

Set or Libbe Cattle, from the last Quarter to the
Change, the Moone in Aries, Sagitari or Capricorne.
Manure and fallow your Land the Moone decreas-
ing.

Sheare Sheepe, plash Hedges, fell Copice, and lop
Trees the Moone increasing.

Fell Timber from Midsummer till Christmas, from
the Change to the full, in temperate weather.

Cut Hayre to grow the Moone in Taurus, Virgo, or
Libra, increasing.

To destroy Hayre, Cornes, warts, wennes, &c. cut
them in the last quarter of the Moone.

Kill Bees and Swine nere the full Moone.

Set or sowe Onions, Garlick, Parsneps, Car-
rets, Beanes, Pease, and such like, after the full
Moone,

Gather Apples and Peares nere the full moone, in
dry weather,

Cut your vines in February, March, or Septem-
ber, the Moone increasing, in Aries, Libra, or Scor-
pio.

The

The vse of the two *Tables* following, of
Thirtie one principall Fixed *Starres*.

The first *Table* containeth the Number and Names of the Fixed *Starres*, with their Declination, Semidiurnall Arkes, and their Meridian height.

The second *Table* sheweth the time of any of the *Starres* comming to South, the first day of the Moneth, (that are in the first *Table*.) By the helpe of these two *Tables* we may finde the time of any the foresaid *Starres* Rising, Setting, and comming to South, with their continuance above and beneath the earth in this manner.

For the first day of any Moneth, first finde the Stars name in the first *Table*, and see what number he hath on the left hand; with the said number you shall enter the second *Table* on the left hand under the Title of *Starres*, and under the Moneth right against the said number of *Starre*, you shall finde the houre and minute of her being South for the first day of that Moneth. If the time of being South be desired for any other day of the Moneth, you must subtract or take away 4 minutes for every day, or an houre for 15 dayes. For their rising, looke in the first *Table*, the Semidiurnall Arke of the Star you desire. And for her rising, take the Semidiurnall Arke out of the time of being South, the remainder is the time of his rising, and the said Semidiurnall Arke being added to the time of South, is the time of setting: The Semidiurnall Arke being doubled, is the time of the continuance above the Earth. The
con

A Prognostication.

continuance above the Earth being taken out of 24 houres, is the time of the Starrs continuance beneath the Earth.

An Example.

FEBRUARY the 6 day, I desire to know the time of Alhabor the great Dogge comming to South, with his rising and setting, continuance above and beneath the Earth. First I finde Alhabor the great Dogge in the first Table to be the 12 Starre in number, with which number I enter into the second Table, and under February against the 12 Star I finde of the clock 48 minuts afternoone, he comes to the South the first day of February. But on the 6 day the demaund is, which 6 I augment by 4 and it maketh 24, which I take from 8 houres 48 minuts, and there remaineth 8 of the clocke 24 minuts afternoone for the true time of his being South on the 6 day. For his rising, in the first Table I finde his Semi diurnall Arke to be 4 houers 34 minuts, which I take from 8 houres 24 minuts, and there remaineth 3 of the clock 50 minuts afternoone, the time of his rising. Then for his setting I add 4 houers 34 minuts, his Semidiurnall Arke to 8 houers 24 minuts, the time of the South, and it maketh 12 of the clock 50 minuts in the morning. For his setting, his Semidiurnall Arke 4 houers 38 minuts doubled, maketh 9 houers 18 minuts: his continuance above the earth 9 houers 12 minuts taken from 24 houers, leaueth 14 houers 52 minuts, his continuance beneath the Earth.

A Prognostication.

Instructions concerning the Aspects, and other Termes peculiar to the Planets.

♄ A conjunction of 2 Planets, is when they are both
in one selfe same degree and minute of longitude.

* A Sextile, is when 2 Planets are seperated 60
degrees one from the other.

□ A Quartill, is when 2 Planets are seperated 90
degrees from the other.

△ A Trine aspect, is when 2 Planets are seperated
120 degrees one from the other.

⊙ An Opposition, is when they are seperated 180
degrees, which is their greatest distance, then is
one Planet opposite to the other.

The Moone is said to stay her course, or be void of
course, when she is not Aspected by any Planet.

The Apogeeum of the Moone or Planet, is when
they are in their slowest motion, or at their highest
distance from the Earth.

The Perigeeum of a Planet, is when he is in his swif-
test motion, and at the nearest distance from the earth.

The Moone or Planet being in the Dragons head
or taile, is at that time in the Eclipicke.

The precession of the Equinoctiall, is the true
longitude of the first Starre of Aires from the Vernall
Equinoctiall point.

Every Planet hath his proper peculiar motion
from the west vnto the East, then is he said to be di-
rect in course.

Retrograde a Planet is said to be, when some cer-
taine dayes he goeth backwards from East vnto the
west. Note that every Planet riseth in the East, and
setteth in the west.

Beale. 1631.

Of the Eclipses.

There will be this yeare foure Eclipses, two of the Sun, and two of the Moone: Thole of the Sun will not be seene by vs, but thole of the Moone may.

The first Eclipse of the Moone will be the v. day of May: The beginning will be at v. of the clock & 24. minutes in the afternoone: The middle at vii. of the clock and 15. min. The end at ix. of the clock and 5. min. The whole duration will be three houres and 40. min. The digits eclipsed will be 21. and a halfe.

The second Eclipse of the Moone will be the xxix. of October at night: The beginning will be at viii. of the clock and 52 min. at night: The middle at xi. of the clock: The end at one and 9. minutes the next morning. The whole duration will be foure houres and 17. minutes. The digits eclipsed will be nere 30.

This latter may be wholly seene of vs: The former will be but halfe, for the Moone will rise halfe eclipsed.

**The Names, Founders, and time of Foundations
of all the Colledges in Oxford, with the Names
of all the Halls adioyned.**

1 Vniuersity Colledge, Founded in the Reigne of R. Alfred, by William Archdeacon of Durham, Anno 873.

2 Balioll Colledge, founded in the Reigne of Edward the first by Iohn Baliol King of Scotland, Anno 1263.

3 Merton Colledge, Founded in the Reigne of Edward the first, by Walter Merton Bishop of Rochester, Anno 1274.

4 Exeter Colledge, Founded in the Reigne of Edward the second, by Walter Stapleton Bishop of Exeter, Anno 1316. but much augmented by Sir William Peter, and moze of late by Doctor Hackwell.

5 Oriall Colledge, Founded in the Reigne of Edward

A Prognostication.

the second, by Adam Browne Almoner to the same King, Anno 1323.

6. Queenes Colledge, Founded in the Reigne of Edward the third, by Robert Eglesfield Chaplaine to Quene Philip, wife of Edward the third, Anno 1340.

7. New Colledge, Founded in the Reigne of Richard the second, by William of Wickham Bishop of Winchester, Anno 1375.

8. Lincolne Colledge, Founded in the reigne of Henrie the first, by Richard Fleming Bishop of Lincolne, Anno 1420.

9. All-Soules Colledge, Founded in the Reigne of Henrie the sixt, by Henrie Chicheley Arch Bishop of Canterburie, Anno 1437.

10. Magdalene Colledge, Founded in the Reigne of Henrie the sixt, by William Wainfleet Bishop of Winchester, Anno 1459.

11. Brasen-Nose Colledge, Founded in the reigne of Henrie the seventh, by William Smith Bishop of Lincolne, Anno 1513.

12. Corpus Christi Colledge, Founded in the reigne of Henrie the eight, by Richard Fox Bishop of Winchester, Anno 1516.

13. Christ-Church Colledge, Founded in the Reigne of Henrie the eight, by Cardinall Wolley Arch-bishop of Yorke Anno 1538.

14. Trinity Colledge, Founded in the Reigne of Quene Marie, by Thomas Pope Knight, Anno 1556.

15. Saint-Iohns Colledge, Founded in the Reigne of Quene Mary, by Thomas White Knight, Anno 1557.

16. Iesus Colledge, Founded in the Reigne of Quene Elizabeth, by Hugh Price Doctor of Lawe, but much augmented by Eubule Thelwell Knight, in the Reigne of King James.

17. Wadham Colledge, Founded in the Reigne of King James, by Master Wadham, Anno.

*The Halls of the Vniuersity are these
eight following.*

- 1 Magdalen Hall.
- 2 Hart Hall.
- 3 Saint-Marie Hall.
- 4 Broadgates Hall, now Penbrooke Colledg^r.
- 5 Gloster Hall.
- 6 New Inne.
- 7 Edmund Hall.
- 8 Albane Hall.

*Qui videt Oxonium, peregrinus visere terras
Desinat; est nil, quod prapossuisse poter.
Si Deus in terris aliquando habitasset, opinor,
Sedibus Oxonii, se voluisse frui.*

A Geographick description of Waies from one
notable Towne to an other, ouer all England, and
thereby how to trauell from any of them to the
Cittie of London: set forth after a new order.

NOtethat the Figuras in the rowes vnder this § marke
is the distance of that Towne they stand against,
from London, or from the Towne you are directed vnto.

From Yorke to London, 150. Miles.

From Yorke goe first to Tadcaster, which is 8 miles.

miles §

To	Banbury	10 24		Oxford	6
	Woodstocke	14 6			

From

From Cambrige to Dunchurch, 4 miles.

Goe first to Dunchurch, which is 9 miles, thence
miles 5

1 ^o {	Northampton	10 18	2 {	S. Eedes	8 10
	Higham-ferris	13 13		Cambridge	10

From Brisfow to Oxford, 42 miles.

Goe first to Sadbury, which is 10 miles, thence
miles 5

1 ^o {	Cicifter	12 26	2 {	Oxford	12
	Farington	14 12			

From Brisfow to Shrewesbury, 70 miles.

Goe first to Awfer, which is 8 miles, thence
miles 5

1 ^o {	Munmouth	10 52	2 {	Ludlow	8 10
	Hereford	12 40		Shrewesbury	10
	Lempster	12 18			

There is another way to goe to Shrewesbury from Brisfow, as to Gloucester, Tewkesbury, Worcester, and Bridgnorth, &c. but it is 17 miles further, and then you passe no Ferry.

From Yorke to Shrewesbury, 103 miles.

Goe first to Wetherby, which is 7 miles,
miles 5

Thence to	Oteley	13 83	thence to	Norwich	10 25
	Bradford	6 77		Beston-wood	9 16
	Halifax	6 71		Whitchurch	10 10
	Blackston-edge	6 65		Pnice	4 10
	Roch-dale	9 59		Shrewesbury	12

Octab. Martini 18	19	19	21
Quind. Martini 25	26	28	28

Note that the first and last dayes of each Terme are the
first and last dayes of appearance.

The Anatomy of Mans body, as the parts
thereof are attributed to the gouernance of the
Moone, passing through the twelue
celestiall signes of the
Zodiacke.

♈ Aries, Head and face.

♉ Taurus
Necke and
throat.

♊ Cancer,
Brest, stom-
mach & ribs.

♋ Virgo.
Bowels and
belly.

♌ Scorpio
Secrete me-
bers.

♍ Capricor.
The knees.

♎ Pisces, The feete.

♏ Gemini,
Armes and
Shoulders.

♐ Leo,
Heart and
backe,

♑ Libra.
Reines and
loynes.

♒ Sagitar.
the Thighs.

♓ Aquar.
The Legs.

The Moone thus sa'd, in euery part to raigne,
Doth make the body in or else complaine.
For if that sicknesse in one part be set, (great
The Moone being there doth make the paine more
But howsoeuer some of this esteeme,
It is of more respect then men doe deeme.

January hath xxxj. dayes.

Old *Ianus* now doth come to take his place,
And commeth to assault vs to our face,
Cold *Saturne* now with him his strengths combine,
Being shrowded in a maligne watery signe.

March hath xxxi. dayes.

Next springing March, that long hath absent bin,
To shew her selfe, doth ioyfully begin.
But yet we of her blustering blasts shall taste,
(She so hath told vs) ere she halfe be past.

Aprill hath xxx. dayes.

Now mournfull Aprill doth her selfe deplore,
And in her plaints shewd, shewers of teares store,
But yet sometimes she will full blithe appeare,
And fairely shew her selfe with countenance cleare.

Iuly hath xxxj. dayes.

Now Mars, with Saturne, comes in opposition,
And Sol in Leo, likes not the Physition :
Canis the Dog-staie doth vs now pursue
Therefore all Physicks in this month eschew.

August hath xxxi. dayes.

This month of August now being come in place,
Beware of surfettings in any case,
Sol and the Dogge as yet being both agreed,
Let not blood-sucking Surgeon make thee bleed.

September hath xxx. dayes:

Now if to helpe thy health thou wilt remember,
Thou maist some Physicke take here in September
Purge, bathe, or bleede, thou not needst feare to doe,
If learned counsell, with thee thereunto.

Balles 1631.

**A Prognostication for the Yeare
of our Lord God**

1631.

Being the 3 from the *Bissextile* or *Leap-year*

**Calculated and especially
referred to the Latitude and
Meridian of the Ancient and
famous City of *Norwich*,
and will serue for all parts
of *Great Britaine*,
and *Ireland*,**

**Vsefull and necessary for all, but espe-
cially for all such as vse the Science
of *Physick* and *Astronomie*, &c.**

*Non nobis solum nati sumus, sed par-
tim patriæ, partim parentibus, par-
tim amicis debemus.*

**By THOMAS BALLEs, *Lover*
to the *Mathematicks*.**

**LONDON,
Printed for the Company of
Stationers. 1631.**

Astronomical Notes, and Calculations for
this yeere, according to the thirſe Noble
Tycho Brahe, and others the beſt latter
Aſtronomers: 1631.

The true Preceſſion of the Equinoctiall is 28 degrees, 39 min: 55 ſeconds.

The obliquity of the Zodiack, 23 degrees, 31 min: 32 ſeconds.

The excentricitie of the Sunne, is 3840 parts: the whole Semidiameter of the Suns excentricke 10000000 or 2 grades, 9 min: ſuch parts as the Semidiameter is 60 degrees

The true magnitude of the apparant Tropicall yeare 365. dayes, 5 houres. 48 min: 45 ſeconds.

But according to the obſervations of the Prutenicks they are thus.

Preceſſion of the Equinoctiall, is 28 degrees. 12 min: 11 ſeconds, 40 thirds.

The obliquity of the Zodiack, is 23 degrees, 28 min: one ſecond.

The excentricity of Sol, 32196 ſuch parts as the Semidiameter of the excentricke of Sol is, 10000000 or parts 1. 55 min: 54 ſeconds, 30 thirds, ſuch as Semidiameter of ☉ excentricke is 60 parts.

The place of the Apo- geon of		10 deg: 21 min: 45 ſec: S	
		0 deg: 0 min: 9 ſec: W	
		7 degr. 13 min: 5 ſec: N	
		29 degr: 9 min: 51 ſec: N	
		16 degr: 43 min: 55 ſec: II	
		1 degr: 10 min: 13 ſec: T	
		W 3	The

Prognostication.

The magnitude of this Tropicall yeare 1631. 265
dayes, 5 houres, 55 minutes, 26 seconds. is

♄ Saturne is Retrograde from the 16 day of February,
till the 6 day of Iuly.

♃ Iupiter is Retrograde from the 28 day of Iuly, vn-
till the 23 of Nouember.

♂ Mars goeth Retrograde at the 20 day of Decem-
ber, and so continueth till the 10 day of March, 1632.

♀ Venus is Retrograde from the 10 day of Nouem-
ber, vntill the 20 day of December.

☿ Mercury is Retrograde from the 21 day of Februa-
ry, vntill the 16 day of March. Again from the 19 day
of Iune, vntill the 2 day of Iuly. Again from the 13 day
of October, till the 3 day of Nouember.

Of the Eclipse this yeere 1631.

This yeare there will happen two Eclipses, or faylings
of light in the Moone, of the which the first of them
will happen vpon the 5 day of May, betwene 6 and 7 of
the clocke at night: &c.

The second defect of the Moones light will happen
to be vpon the 29 day of October, being Saturday, at
three quarters of an houre past 9 of the clocke at night.
But neither the former nor the latter (as it seemeth to
me) will be visible in our Horizon, and therefore I for-
beare to speake any further thereof.

A Briefe Description of the foure Quarters of the Yeare of our Lord, 1631.

Of Winter, ☉ in ♊ ≈ ♋.

This Hyemall Solstitiaill Quarter vsually called Wint-
ter, according to Astronomie, did take its beginning

in the 13 day of December in the antecedent yeare 1630 at 4 a clocke and 16 minuts past in the after-noon. At which time Sol the great light of the day, maketh his primeriall entrance into the melancholy and oblique signe Capricorne, being then declined from the Equinoctiall, according to the obseruation of the most expert and learned Ticho Brache. 23 degrees 31 minuts 30 seconds South-wards (or as it is found by obseruation now; to be 27 grades, 28 minutes, which is his greatest declination that can be.) At which time he maketh the shortest day with vs in all the yeare, and the longest night.

This Quarter, according to the description of Galen, in his first booke of elements, is of complexion cold and moyste, for saith he, in this Quarter moisture exceedes drynesse, and coldnesse exceedeth heate &c. This Quarter continueth vntill the 10 day of March.

The Diseases incident to this Quarter, are such as breed of flegme and Melancholy, because in this Quarter flegme and Melancholy doth increase, as Galen testifieth. Therefore in this Quarter, it is not good to eat things over-moyste. But in this Quarter use meates dyessed with Hony, and Cinamon, Mace, Nutmegs, Ginger, Graines, Cloues, Galingale, and such like: and the same in drinke this Quarter, doe cherish the bloud, the heart, and all the body.

Of the Spring Quarter. γ δ II.

This Vernall Quarter of the Spring, doth take his beginning, according to the opinion of all Ancients, about the 10 day of March. But this yeare according to Astronomical Calculation, it taketh its beginning vpon

A Prognostication

the 11 day, 20 minutes, after 1 of the clocke in the morning, at which time bright kingly Sol begetteth to conuer himselfe into the first limit of his dignified mansion, I meane the first scruple of the Aëtiuall signe Aries, wherein he is exalted and seated in his loftiest dignities, hauing transported himselfe by his circular motion into a signe of his owne nature and likenesse, making the dayes and nights of equall and euen proportion; in all places which are habitable: making the day 12 houres in length, and the night in like manner. This Quarter according to the opinion of some, is of the nature of the ayre hot and moyst, but Galen doth mislike this, blaming them much which name it so, prouing it abundantly in his first booke of Temperaments: that this season is most Temperate, and that it is not more hot then cold, nor more moyst then drie; but of a iust Temperature, and equall mixture; Insomuch that it is the meekest time (of all other) to take Physicke for the bodie's safetie and healthfull preservation; For saith he; if it were hot and moyst (as they say) then were it the most pestilent state of ayre of all the time of the yeare. But Galen would haue this temperate season to end, at the end of Aprill, which is some 6 dayes after the rising of the Pleiades mentioned in 38 of Iob and the 31 verse; So that this season of equall temperature according to Galens appointment, lasteth not about the space of 7 weekes for at the rising of the Pleiades (which is now in our Horizon, about the 2. day of Aprill) he saith that Summer doth beginne: Which Summer is in complexion hot and drie, and therefore meete to increase choleric. But I myselfe, am of opinion, that the moneth of May is onely hot and moyst, or else more truly, from the 12 day of May untill the 12 day of Iune Which time the Sunne hath his Residence in the hot and moyst (ayrie) signe

signe Gemini. The which time is most pestilentiaall, and Corpulent, and we then most obnoxious and subiect to danger, and take and receiue into the body grosse vnwholesome vapours, (but especially if the South Winde doe abound in that moneth of signe.) Which thing naturall experience doth abundantly make vs to vnderstand. Againe the Ancients in Philosophie haue diuided the seasons of the yeare much different from the Husbandman and the Astronomers, as the learned Philosophy knoweth well enough. But I goe herein much beyond my bounded limit, therefore I digresse; and will onely hold my selfe (in this place) vnto the diuision of the Astronomer, (and the common vse of our Countreymen;) By whose computation this Quarter continueth vntill the 12 day of Iune.

The diseases incident to this Quarter are such as are engendred of corrupt blood, as the Pox, Spottumations in the stomacke, the Scurue, Jaundies, of which the skilfull Physitian needeth no instruction or intelligence.

Of Summer. ☿ ♋ ♎.

Summer, the third Quarter of our yeare according to our vsuall account beginneth amongst vs the 12 day of Iune, at which time the Sunne hath his greatest declination North-ward, entring into the first scruple of the direct ascending signe Cancer. At what time he maketh vs to behold our longest day and shortest night, hauing the day as long now, as the night was, when hee was in the opposite Solstitiall signe Capricorne: at which Solstitiall Tropicall signe he began to turne himselfe

A Prognostication.

from them of the Southerne Climate vnto vs ; so now he be-
ginmeth to turne himselfe from vs, making our dayes
shorter and our nights longer. This Quarter is of dis-
position and qualitie of the nature of fire, hot and drie,
for in this season the blood and humors doe boyle with-
in the body, by reason of the vehement heate of this im-
moderate season. Therefore the inward heate of the bo-
dy is but little (in comparison of that it is in the Winter
season.) For now the inward heate fleeth vnto the exter-
nall parts of the body, and so leaueth the inward di-
gestiue facultie feeble and weake ; for which cause meate
should now be taken in a farre lesser quantitie, and also
they should be of ea^{er} digestion and a more cooler ope-
ration. This Quarter lasteth vntill the 13 day of Sep-
tember.

In this Quarter I doe aduertise all my friendly
Countrimen to take no Phisick, but to vie coole hearbes
and moderate diet, which is the nurse of health to all
men.

Of Autumnie. ≈ ny 7.

This Autumnall, and last Quarter of the yeare com-
monly called Haruest, takes his beginning this
yeare with vs vpon the 1. day of September. Sol hauing
runne himselfe (according to his enliuen progresse)
vpon the first grade and minute of the Westerly A qui-
noctiall signe Libra. At which first entring and touch
thereof, he maketh againe the dayes and nights to be of
equall length to all these places that are likely to be in-
habited in this World. As he did at his first comming
into the Estiuall Equinoctiall signe Aries. This Quar-
ter (especially the latter end thereof) is of complexion
cold

cold and dry, but the beginning of it is not so, but it is temperately cold and temperately dry. Therefore while this time of meane temperature doth last, it is a meete time to vse Physicke and also Phlebothomy vpon indifferent needefull causes: whereby the body may be freed from diseases the Spring following. The course and extent of this Quarter continueth vntill the 12 day of December. This Quarter in condicion, this yeare, is likely to be churlish and hard, & therefore the more pinching for them which haue not bene prouident in the Summer past.

This Quarter is very dangerous to take sicknesse in, as Galen and Hippocrates sayth, and as experience telleth vs; for who so gets an Ague now in the fall of the leafe, he may happe to enioy it longer then he maketh reckoning on.

The infirmities of this Quarter are dangerous, because of the melancholy season and cold ayre, as stuffing of the head, losse of memorie, Hemeroids, Blacke Jaundis, falling-sicknesse, from the which let vs pray vnto our eternall and onely good God to free vs.

Here followeth an Explanation and Introduction teaching the vse of the fift, sixt, and seventh Columes of this

ALMANACKE.

I In the fift colume or space of the Kalender, you haue noted vnto you the particular aspects of the Moone, with the other six Planets for each day in euery moneth as they fall; shewing at what houre of the day

A Prognostication.

or night the true aspect doth happen, denoted and signi-
 fied vnto you by those two letters (a) and (p) whereof
 (a) signifieth vnto you, a-foze noone, & (p) signifieth
 vnto you (the after-noone,) or past noone. As for ex-
 ample, looke vpon the third day of the moneth February,
 and there you shall see that the Moone is beholden of
 the Planet Mercury by a trine aspect noted vnto you
 thus, $\Delta \text{ } \text{V} \text{ } \text{D}$. Now if you will know at what a clocke
 of the day this aspect doth happen, you may easly gather
 that it is at 7 of the clocke, and because that (a) follow-
 eth or standeth with the figure 7, therefore you may as-
 sure your selfe that it is at 7 of the clocke (a) a-foze-
 noone: for if it were (p) that did follow the figure 7, then
 you might certainly know that it should fall at 7 of the
 clocke past noone. Again the 9 day of February you
 shall finde that Mars doth behold the Moone with the
 like aspect as Mercury did the third day, as you may
 plainly see marked thus, $\Delta \text{ } \text{J} \text{ } \text{D}$. Whereby you may
 see that this aspect doth happen at 11 of the clocke past
 noone, and because it falleth at a 11 of the clocke past
 noone, why therefore you may say that it falleth at a 11
 of the clocke at night: and so of all the other dayes
 throughout all the monethes. Also by this aforesaid di-
 rection, you may evidently vnderstand and know the be-
 ry times of the new Moones, with her fulls and Quar-
 ters, written with redde, with these wordes, and on
 this fashion new D. full D. first qu. last qu. &c. Where
 you may see vpon the 8 day of Ianuary, that we haue a full
 Moone at 4 of the clocke and 19 minutes past in the
 morning; or afoze-noone. And on the 14 day of Ianuary
 you haue the Moone come into her last quarter at a 11
 of the clocke and 5 minutes past in the night. Also the
 21 day you may see that there will be a new Moone 4
 minutes past 5 a clocke afoze-noone, And so of the first
 quarter

quarter the 30 day, and so of all the other Moones in all the other monethes

Now on some dayes when you finde no aspects of the Moone set downe, then assure your selfe that shee is not truly aspected of any Planet that day: Such are the 7 and 18 dayes of February, where no Planet doth perfectly aspect the Moone neither of those dayes. Also on such dayes as the Moone is savage or boide of course, I have noted it unto you.

Again when as you shall finde the Moone to be aspected with two Planets on one day, which you shall finde so on many dayes. Then know that that aspect and Planet which falleth out to be first, I have set downe that foremost, and the other after it which happened after it: as on the 12 day of February there happened a trine aspect with Jupiter and the Moone, and also a trine with Mercury and the Moone, now because the trine aspect of Jupiter tooke first effect, therefore I placed that foremost; And so assure the selfe of all the rest.

An Explication of the sixt and seventh Columes.

Now having sufficiently (I hope,) satisfied you concerning the vse of the sixt colume; I come now in a word to instruct you briefly in the sixt and seventh columes or space, wherein is denoted unto you the rising and setting of the Sunne in our Horizon at Norwich, although not so exactly I confesse as it might have bene; yet is the error of a very little value,) Where he doe observe the true Longitude to be 57 grades, and

A Prognostication.

14 minutes; and the latitude to be 51 grades and 44 minures, & 7 seconds: Now to know the rising and setting of the Sunne by these columes, which I haue calculated for every day throughout this yeare. Enter the Kalender for any day whatsoever you please in all the yeare, and right against that day in the 6 colume you haue the houre and minute of the Sunnes rising, and in the 7 colume immediately right against that, you haue the houre and minute of the Sunnes setting. One example shall make plaine for all; as thus. If you will know by this Kalender at what time the Sunne riseth the 6 day of Ianuary looke vpon the 6 day, and right against that in the second colume, you shall finde the letter (F) and right against that in the third colume you shall finde written in redde (twelue day) and in the fourth colume (Can 4) (which is to say, the Moone 4 degrees in Cancer that day at high-noone) and right against that in the fifth colume a * with * 12 6. 2. And in the sixt colume right against that you shall finde two figures of eight set thus 8, 8, of which the first sheweth vnto you the houre of the day, and the second sheweth you the minute. So that you may thereby know, that the Sunne riseth the said 6 day of Ianuary, at 6 of the clocke and 8 minutes past. And in the seuenth colume (which is the last) right against that you haue there set downe in figures also, 3 and 42, which sheweth vnto you that the Sunne setteth at 3 a clocke, and 42 minutes vpon the foresaid 6 day of Ianuary: And so of the rest of all the days throughout the whole yeare. This is so plaine and easie that you cannot misse.

Cautions concerning the donation
of Physicke; and the vse of
PHLEBOTHOMIE.

I speake something of Physicke, and the vse thereof, with the Rules of administration of motions, pilles, and other purgatiues; as also Batching, Sweating, of such like were in my opinion of very little purpose, seeing that now in these dayes the vse of the Noble Science of Physick is now growne so common, yet not in regard of the learned and Iudicious Physitions, for of such wee haue not one too many, but for the many coueners, and smattering dog-leaches (as I may rightly call them,) who with boasting and high-sounding vauntings; haue seduced many Ignorants and draine them after them, in great multitude, vntill such time as that wofull experience hath brought them vnto too late repentance; for such as they, will take vpon them to administer their vnskilfull compounded drugs at all seasons without due regard of the time, or configuration of the Moone, with the rest of the superiour Planets, which is a thing of most principal consequence, and greatest importance (next vnder God) of any thing that belongeth to the receiuing of Physick, wee haue sufficiently seene it proued in many such causes.

A Prognostication

For at the time of the Patients receiuing of Physick, if the Moone be configurated with euill Planets, how much damage shall he bring to himselfe, and danger to the Patient.

As for telling you in what signes the Moone should be for you to purge with pills, or potions, or powders, or to giue vomits, or to purge any of the humours, as Choler, Flegme, or Melancholy; If you (I say) know not these things already without booke. hauing beene therein often instructed in other mens Almanacks, why then I must tell you and that very flatly, that you are not woorthy to be permitted to vse Physicke. Also all that I haue here sayd of the obseruation of Physickes administration, I haue also meant concerning the vse of Phlebothomie, for much more in this behalfe might haue beene spoken, but I desist. Also concerning husbandicall Elections, which they may finde out in other their old Almanacks I haue here quite omitted them: proceeding to other things, as followeth.

Of the Eclipses this yeare 1631.

There will this present yeare, happen two eclipses onely of the Moone; the first which will happen to be vpon the first day of May, the

seauen a clocke at night but it will not be apparant to vs at all: for (according to my obseruation) shee will fully and clearely haue recovered her light befoze she riseth or offereth her selfe to view in our Horizon, whereby you may obserue, that this Eclipse of the Moone will appeare very manifestly to all them that are of the Easterne Inhabitants.

The second Eclipse of the Moone, will fall to be vpon the 29 day of October, at halfe an houre past 10 of the clocke at night; and will be most apparantly beholden in our Horizon, euen in all this Land of great Britaine &c. Luna being then iust opposite to the Sunne, she being moued but 44 minutes past the Dragons head: and Sol being likewise distant but 44 minutes from the Dragons-tayle; The beginning of this Eclipse, will be a quarter of an houre befoze 9 of the clock, the middle of this Eclipse will be 20 minutes befoze 11 of the clocke, the finall end thereof will be at 3. quarters of an houre after midde-night. So that the whole continuance thereof (as it seemeth to me,) will be iust 4 houres: The digits or parts eclipsed, will be 20: whereby this will be seene a great Eclipse, if the thickenes and cloudinesse of the ayre doe not hinder the sight thereof.

Januarie hath xxxj. dayes.

Now wily *Hermes* loynes with furious *Mars*,
And *Mars* with *Venus*, these three errant stars
Gue vs an item of some sudden stormes,
And boystrous weather, if no further harmes.
Through naughty dier, many men will fall,
And *Hermes* pupill's portion is but small.

March hath xxij. dayes.

A royall meeting of great Ioue and Sel;
So neere the vernall Equinoctiall.
Is good, if *Hermes* doe not faile his Maister,
But he fall's backe to *Mars*, a sad disaster.
Troubles vsent for, and vnlookt for, haist;
And sayrest dayes, haue foulest ouercast.

The Joazeiro

Aprill hath xxx. dayes.

Why doth it raine so oft, I pray thee tell,
 And why from heauen, doe fall such stormes of hayle?
 Cause for our Sinnes we neither weepe nor moune,
 The heauens themselves for vs to teares, doe turne.
 Purge, bleed, take Phisicke, if thou wouldst preuent,
 Thy bodies sicknesse, and thy soules repent.

May hath xxxj. dayes.

Last May wee had an Eclipse of the Sun,
And since that time an other of the Moon,
And now Apollo's neere the Pleiades,
And mask Diana, with old Saturnus playes.
These great defects doe bode no danger small,
To Men, to earth, to Cattle, fruit, to all.

July hath xxxi. daies.

Venus and Mars, now shew though seldome scene,
And Leo in Sals Chariot draws the Queene.
Of night, and Procyon's heate is great, and Ioue
With Hermes squares; These will disturbance moue.
Within this brittle, sickle ball of earth
And turne to Elegies, our former mirth.

September bath xxx. dayes.

Now Venus arme in Arme linkt with her foe,
I meane old Saturne, whom shee were, could brooke,
Vainemen in halt, thus runne vpon their woe,
When they vpon a Curtezan doe looke,
Rom's great & potent State did neuer shrinke,
Till they began to wench, to coah, and drinke.

A briefe and necessary explanation of the eight
seuerall Columnes in the Almanacke; with
the vse thereof for this yeare.

The first is the dayes of the moneth.
The second the dayes of the weeke. B be-
ing Sunday letter.

The third containeth Saints dayes, with
vs used in England, and the mutable feasts. As like-
wise the passions and places of the 7 planets, whereby
the industrious may learne to know them. A Planet is
said to be orientall, when hee may be seene in the morn-
ing befoze Sunne rise. But Occidentall, when
hee appeareth after Sun set. As the 1 day of January
(Saturne) is Orientall, whereby I conclude him to be
a moorning Starre, or to be seene befoze the Sunne be-
ginnes, ♃ (Iupiter) Occidentall, an evening Starre, or
to be seene after Sun set. And so for any the rest. That
Colunne hath the rising and setting of some notable
Stars, which the Planets and Moones coniuncti-
on with them against the dayes on which they happen,
both pleasant and vnsfull.

The fourth Colunne is the place of the Moone, or
(as wee say) the signe and degree hee is in euery day
at noone.

The fifth, the coniunctions and aspects of the Moone
to the Planets; as likewise of the Planets among
hemselves. As for example the first of January I finde
these Characters: ♄ ♀: the coniunction of Mars and
Mercury. Also the 15 day I finde ♃ ♀ the coniunction
of Iupiter and the Moone: and so of the rest.

The sixt is the Change, full, and quarters of the ☾,
with the inclination of the weather in euery quarter
throughout the yeere.

A Prognostication.

The two last columns are in use for those that know the Roman or beyond Sea attempt it for Spaniards, Martiners and others.

A declaration of the former quarters or parts of the year 1631, with a brief Astrological Judgement upon each of them severally comprehended under their proper and peculiar Resolutions.

Although the best Astronomers (not without great reason) doe usually begin the year in March at the circular returne of the Sun into the first scruple of Aries, yet in respect of the common custome of our English Prognosticators I not presuming to breake any such custome, will also dispose my matter after their manner and begin the Prognosticks with the last Hiemall Astronomical quarter of the year 1630. which is the first part of our new Prognostications.

Friger et humet Hyems, glacie et nive flumina stringit.

Winter.

Tooke it's beginning the last year 1630. upon Saturday the 11 day of December at 5 of the clock and 45 minutes past in the afternoon: The Sun then entering the first minute of Capricorne. At which time the 18 degree of Cancer doth ascend the house of the Moon Hegmarich watery, cold and moist, aspected of Saturn from a trine in Scorpio the house of Mars the same in nature, but most malevolent, who with Mercury and Mars are Lords of this Hiemall or Winter quarter, and his septentrionall orientality will cause vehement winds from the North and North-east, and oftentimes the Moon meeting with Mars and be predominating, will suddenly turne the wind to the West, which will increase rain moist and unwholsome weather troubled with thicke and pitchey cloudes, snow in abundance, with an overflow of waters danger by shipwrecke perill to women in child birth, or losse of children. The diseases of this quarter are those proceeding of

tholly, the Epilepsie, falling sicknesse, madnesse, and
prouesse and some hurt to many, by venomous and hurt-
full Creatures, as Caterpillers, spiders, serpents, &c.
D; by payson, which Saturne threatneth, being in the
house in Scorpio, as likewise the continuation of Mars and
the Sunne both augment the former predictions.

January.

The 15 day in the morning Saturne and the Moone
may be seene together in the 15 degree of Scorpio.

The 21 day in the morning, Mars and the Moone are
together in the first degree of Aquarius, hardly to be
seene.

The 24 day in the West after Sunne is set may the
Moone and Iupiter be seene together in the 16 degree of
Pisces.

Venus and Mercury cannot be seene.

February.

The 12 day Saturne is retrograde, and the Moone is
with him in the 17 degree of Scorpio about 4 a clocke in
the morning.

The 19 day Mars is neere the Moone in the morning.
Iupiter, Venus, and Mercury all this moneth are combust
and cannot be seene.

Ver praxet flores, calidum ver feruet et humet.

Of the Spring.

Which takes it's beginning on Thursday the 10 of
March this yeare 1631. at three quarters past 5 a clocke
in the after-noon. At which time the Sun then en-
ters his exaltation, the signe of Aries making the day
and night of equall length (vnder the Pole excepted)
throughout the world. At which time likewise the 28.
degree of Virgo doth ascend in the East, the principall
house of Mercury, of an earthly cold and dry nature.
Mercury is chiefe lord of this quarter, & so consequently
of the whole yeere, with some participation of Mars, he
unfortunately seated in the 6 house, the house of Ach-

A Prognostication.

ness, in conjunction to Mars, in his detriment and fall retrograde &c. (all which les derniers troubles et empeschements de Mercury; and that likewise the effects of the last Eclipse of the Sun, vpon the last of May the last yeere are now in force, wherein Mercury doze greatest sway) are sufficient testimonies for vs to thinke this an extraordinary vnfortunate yeere with Mercurialis, as great Scribes, Protonotaries, Secretaries, Embassadors, Marchants, Rectours, (and if you please Astronomers) with others of whom hee is Patron, by cattuity and imprisonment, vpon displeasures of their lordes and masters conceined against them, likewise he threatneth the vnfaithfull practises of seruants towards their masters, and some notable euents there by presaged: Likewise many soze infirmities to Infants and children, and those of young age. The disposition of the ayre is noted in the Almache more particularly.

Touching the diseases & infirmities that will raigne this quarter, they will be hot Agues and pestilent feauers, Inflammation of the cliuer, melancholly madness, rottennes, consumption, the Plague, & whatsoeuer may spring of choller and corrupt blood: Besides some other significations which I willingly p̄etermit, beseeching the Almighty of his accustomed mercies to continue his fauourable blessing towards vs.

March.

The 11 day Saturne and the Moone are together in the morning.

The 20 day Mercury is direct, and the Moone may be seene with him in the 12 degree of Pisces very early in the morning and so from him she goes to Mars.

The 21 day she appeareth neere to Iupiter.

The 23 Venus and the Moone are close, yet hard to be discerned.

Venus is ouer euening Starre all this moneth.

Iupiter

Jupiter, Mars, and Mercury are moorning Starres bsh-
tering the Sun in his glozy, comfortable to early risers
telling them the day is neere at hand.

Aprill.

The 7 day Saturne and the Moone rise together in
the East at 7 a clocke at night.

The 18 day Jupiter and Mars with the Moone are in
consultation betime in the moorning.

The 20 day Mercury and the Moone parley.

The 23 day the Moone and Venus neere the seven
Stars may be scene neere together, very neere, after
the Sun is set.

May.

The 5 day Saturne and the Moone rise neere one a-
nother at Sun set, and so walke together all night.

The 16 day Jupiter and the Moone at three a clocke
in the moorning may bee scene Southeast close by one
another.

The 17 day Mars and the Moone enter Taurus both
together very early in the moorning.

The 22 day Mercury may bee scene (with a perspi-
cuous eye) with the Moone in the West at night.

The 27 day Venus and the Moone set together an
hower after Sun set.

Venus is our evening Starre all this moneth.

Of the Summer.

Aestas sicca calet, formosa est messibus & flas.

The Summer takes it's beginning vpon Saturday
the 11 day of Iune 3 quarters past 9 a clocke at night,
and then the Sun entereth the first minnte of Cancer,
the 26 degree of Capricorne rising, and Venus with Mer-
cury neere the angle of the West. Saturne eleuated in the
ninth house in opposition to Mars, who governeth this
Ethiall quarter, vnsfortunately placed in the 3 house
in his detriment, will greatly incense brethren & kin-
folkes to quarrells amongst themselves, and stirre vp

A Prognostication.

diuers suites and contentions. The death of some of the Clergie is hereby signified with other misfortunes to men of the Church, likewise troubles and grieuances (by robbery and bloodshed) to men traueling long iournes, and shipwack to many. The ayre will be pestiferous, with many South and South-west-windes, and sometimes Southeast, causing much heat, thunder, lightnings and other dissempered weather, and the destruction of fruit and cress, the death of Cattell, &c. Iupiter by reason of his being in the second house with the Moone will bee fortunate to many by the death of their friends, as also an increase of substance, household goods moueables, &c. through merchandise and otherwise, and these things to happen to those men that are vnder his dominion, and Aries.

The sicknesses & diseases that will raigne this quarter, will be fluxes, consumptions, the Measels, shagge and acute feauers, great paine in the head, and eyes, frenzies, the Pestilence, and other diseases proceeding from putrified and corrupt blood mixt with melancholly.

Iune.

The first day the Moone and Saturne walk together and Mars opposeth them.

The 12 day the Moone salutes Iupiter, and they both rise about one in the morning.

The 15 day Mars and the Moone are neere the seven Starrs.

The 20 day Mars passeth by the 7 Starrs, and Mercury becomes retrograde and ioynes with the Moone.

The 22 day, the Moone and Venus are together in the East.

The 28 day Saturne and the Moone are together in the gaine.

Venus, Saturne and Mercury, are euening Starrs, Iupiter and Mars are fore-runners of the day.

July.

The 3 day Mars with the Bulls eye, And Venus with the Lyons heart are neere together.

The 10 day Iupiter and the Moone are early risers.

The 14 day Mars takes hold of Luna and plot together.

The 17 day the Moone findes light fingered Mercury in her pocket, and she is angry.

The 21 & 22 dates Venus and the Moone in Virgine play the wantons.

On S. Iames his day, Sol & Saturne are at hartiance, the Moone goes to comfort the ould man, but all fall together by the eares.

Saturne and Venus are onely the evening Starrs.

The rest are day Starrs, and make ready a way for the Sun before hee be up.

August.

The 6 day the Moone with bright Iupiter walke together all night.

The 12 day the Moone finds Mars newly entred her lodging.

The 20 day Venus with the Virgines spike welcome the Moone and walke hand in hand till 10 a clocke at night.

The 22 day the Moone attaines to Saturne, and in the dead of the night he scales from her and hides himselfe in the West.

Venus and Saturne are our evening Starrs, but seane vs when it growes darke. But kinde Iupiter hath an eye over vs all this moneth every night.

Mars is a morning Starre, Mercury hides himselfe under the wings of his Master.

Of the Haruest.

Musta dat Autumnus, et morbos, siccit, et alget.

The Haruest (or fall of the leafe) begins upon Tuesday the 13 day of September 10 minutes past noon; the Sun then enters Libra equalls the night with the day.

A Prognostication.

and the Scorpions heart ariseth in the East. Iupiter is Almuten of the figure in the opposition of Mercury, both are angular. And although they will cause a furious conflict of winde and tempests, yet will it not be much hurtfull to things growing on the earth, some houses, buildings, and such like places shall feele the effects of this influence by being soze bruised, battered, and broken downe. But let vs hope for a good harvest, and second spring, for that Iupiter is fortunate in the earthen angle, and Lord of the Ascendent. Saturne and Venus toynd in the 12 house, in the worst signe and place of the heauens, giue vs an Item that many intoxications, incantations and inchaunments shall bee vled, and other wicked and vngodly practises: For which because their significations are in the 12 house, many shall suffer captiuitie: and others death, because Mars the disposer of the 12, is in the 8 house, also here is signified a further death of Cattle. The diseases of this quarter are such as were the last, but more violent.

Astra regunt Corpus, mens libera, sidera vincit,
Est Deus in cœlis, hunc cole, furus eris.

September.

The 1 day the Moone accompanies Iupiter through the Ramme all night.

The 10 and 11 Mars with the Moone, and Saturne with Venus play strange tricks. Si non calle tamen caute.

The 17 day Mercury, the Moone, and the Virgins Spike, loyne in consultation against Iupiter and Mars.

The 18 day Saturne and the Moone make a match, but the 19 day like a wanton girle shee plays with Venus and leaues Saturne in the lurch.

On Michaelmas day at night, the Moone and Iupiter oppose the Sunn till at his setting.

Saturne with Venus like an old man, fealous of his young wife, walke abroad in the euenings all this moneth, and by that time they goe to bed. Iupiter appears

which

peares glorious in the Southeast and by South.

Mars is a moyning Starre all this moneth.

Mercury is an evening Starre.

October.

The 9 day Mars and the Moone may be scene by rare-
lrisers.

The 18 day at night Venus and the Moone are to bee
scene in the West.

The 26 the Moone and Iupiter at 10 a clocke at night
are very neere in the South Southeast.

Venus is a glorious evening Starre all this moneth.

Saturne and Mercury cannot be scene.

November.

The 6 day at noone Mars Ioynes with the Moone and
that moyning at Sun rising they are together in the
South angle, and in square to Saturne, shewing men are
apt to wrangle.

The 13 day Mercury and the Moone appeare in the
East in the moyning.

The 15 day Venus is retrograde and Ioynes with the
Moone at night.

The 22 day Iupiter followes the Moone all night, and
the 23 day the Moone followes him.

This moneth Saturne cannot be scene.

Venus sets an houre after Sun set, and vpon S. An-
drewes day the Sun hides her from vs.

Cæli enarrant Dei gloriam, et firmamenta eius opera.

Of Eclipses.

Four times this yeere shall the Inhabitants of the
earth want the light of the Luminaries, twice of the
Sun, and twice of the Moone, but neither of the Sun
shall bee visible in our Hemisphere. But both of the
Moone shall be apparant and plainly scene with vs of
Great Brittain and the Kingdomes adiacent.

Of the first of the Sunne.

Which shall happen (the 21 day of Aprill at our 9 a
clocke.

clock in the forenoon) to the people living in the South parts of the World, and in the utmost parts of Asia at their 3 a clocke afternoone. The Luminaries then being in the 11 degree of Taurus not far from the Dragons head, The dignities darkened are 3 parts of 12. And therefore being of so small a quantity, and by the reason of the much Southerne latitude of the Moone not to be seen by us, I forbear to speake further of it.

Of the first Eclipse of the Moone.

Which shall happen in our Ioyson upon Thursday the 5 day of May at 7 minutes past 7 at night, just at Sun set, in the 24 degrees of Scorpio, the Moone a little separated from Saturne and the Dragons tayle. The beginning will be a quarter past 5; the middle or greatest darknesse just as shee riseth, and the end at 9 a clocke at night from the beginning to the end will be 3 houres and a halfe, the parts darkened are 21 of 24. The colour will be very blacke. Cum luna eclipsetur in ultimo Decano Scorpionis, Oluas destruit, aerem exicat, febris et uolae facit, atque insuper inter mortales plurimum sedit morbo, rixis, seditionibus, exdibusque. Hæc Proclus.

Of the second of the Sunne.

Which shall happen (to the Inhabitants of the South in the utmost bounds of Asia, and towards the East of Cathaia, the great Little Calacia, and the mountaines of Belgian, with the circumiacent regions and countries under the dominion of the great Cham upon the 15 day of October at their 3 a clocke and 10 minutes in the afternoon) To us at our 5 a clocke in the morning; And therefore not to be seen of us, nor to us appertaining. The parts darkened are just the halfe of the Sunne by the Sunne and Moone in the first degree of Scorpio nere Anababison, or the Dragons tayle.

Of the second and last Eclipse of the Moone.

This Eclipse of the Moone, shall be seen with us from the beginning to the end, it happeneth on Saturday

day the 19 day of October 3 quarters past 8 a clocke at night. The middle of greatest darknesse at 8:11 of the clocke. the end of recovery of light at one a clocke the next morning. from the beginning to the end will be 4 houres and a quarter. The parts darkened are 19 of 24, and will be of as darke a colour as the former, and Saturne now doth oppose her, as before in the former Eclipse of the Moone, he toynd with her, which will much increase the former influence. This defect doth happen in the 16 grade of Taurus which according to my former authoz. Satorum, seminumque sterilitatem immittit, et cuiusdam Matronæ regalis stemmatis obitum minatur.

The natures, properties and Characters of the 7 Planets. And the 12 signes.

Post *S I M*, *S V M* sequitur, proxima Luna subest.

If you will count the Planets soone,

Remember *S I M*, *S V M* next the Moone.

S. Saturnus. I. Iupiter. M. Mars. S. Sol. V. Venus. M. Mercurius. Luna.

Of Saturne.

The Planets differ from the fixed Starres diuers waies, for the fixed Starres twinkle some moze, some lesse, but the Planets neuer twinkle. The fixed Stars haue one and alwaies the same habit to one another, but the Planets are obserued in diuers nights, to be moze neere, or further of from the fixed Stars, and amongst themselues. So that we know Saturne by his leaden and pale swarthy colour, hee is called Saturnus a saturare, vel quod saturatur annis, hee is 30 yeeres in compassing the Zodiaque. And because of his great distance from the Sun, hee is of nature exceeding cold, and dry; the authoz of blacke and darke weather, inundations, earthquakes, frost and snow, and if the Moone be from him, or his aspect to the Sunne, or from the Sun to him, it is *Apertio portarum*, causing an exceeding

A Prognostication.

ding coldnesse in the ayre (though in Summer) much
raime, hable, snow, and blacke weather, and as the quar-
ter of the yere requireth in whiche it happeneth, (as
you may see in a table in my last yeres Almanacke) he
ruleth the East winde; and is an vnder enemy to nau-
ture. And hath this note ζ for his character, like an
ould man leaning on a staffe.

Of Iupiter.

Iupiter, diſtus eſt a iuuando, hee goeth his circuit in re-
yeres, he is of a bright fulgent aspect; and being plac-
ed betweene, Saturne and Mars, and because of his
convenient distance from the the Sun, he is of nature
temperately hot and moist, & because of his great light,
he is termed the father of cleernesse, and producer of
wholsome gales, and faire weather. Hee causeth the
North winde And if the Moone go from him, or his as-
pect, and presently apply to Mercury, or from Mercury to
him, it is Apertio portarum, and expect a mighty and ve-
hement conflict of windes. Hee is natures best friend,
and hath for his character this note γ , as it were a man
holding a scepter in his hand.

Of Mars.

Mars (quasi Mauors) quia maribus in bello praeſit, he is
of a most fiery red colour with obscurity, he passeth be-
der the 12 signes in two yeres, he is of an exceeding hot
and dry nature, the Autho: of tempests, haile, raine and
thunder, heate, coruſcations, fire, impressions in the
ayre, and sudden alterations of the weather. He inge-
nereth the West winde. And if the Moone passe from
him or his aspect, and immediately apply to Venus,
from Venus to him, it is Apertio portarum, and looke for
showers, thunder and lightning, he is as ill as Saturne
and that you may know him, he is thus marked δ , as
were a barbe, or some warlike weapon.

Of the Sunne.

Solus est solus lucens, \odot is Oculi et Anima: mo-
uſt to the

he goeth through the 12 signes every yeere, according
to that old verse: Curriculum Titan his senis mensibus
implet. He is the distinguisher of yeeres, times and sea-
sons, he is the most radiant object in the heavens, and
all other lights become darke at his approaching, hee
alters the ayre in respect of his being in the signe, and
his configuration to the Starres fixed and errant, but
his greatest force is to cause snow, haile and hoare frosts
and meanly raine with windes, hee is of a meane na-
ture, hee is thus by the Ancients characterd ☉.

Astrorum princeps, cæli decus, orbis et Anni,
Arbiter, ad nutum tempora resq; gero.

Of Venus.

Venus a Venuſtate, hee is the most brightest and cleere
Starre in all the firmament (the luminaries excep-
ed) he goeth her course as the Sun, hee hath by the
magar beene often taken for a Comet, for he is of such
copious light, that he casts forth beames, and some-
times giueth a shadow, hee is neuer from the Sun
(nee et retro) above 48 degrees, for which cause he is
called his Chambermaid. If hee rise before the Sun,
he is called the morning Starre. But if hee appeare
after Sun is set he is term'd the evening or hepheards
Starre, hee is temperately cold and moist with a little
state, hee is the mother of raine, howers and misting,
specially in moyſt signes, and he produceth the South
wind, hee is a good friend to nature, and for her char-
acter he hath this note ♀, as it were a young girl, or a
ende of a looking-glasse,

En Soli vicina Venus niter aurea vultu,

Commoda dat Thalami fœdera, dote bear.

Of Mercury.

Mercurius (a merce vel mercatura) goeth his course as
the Sun and Venus doth, and hee appeareth somewhat
morning, but not very bright, and by reason of his near-
ness to the Sunne (being neuer above 19 degrees dis-
tance

A Prognostication.

stant) he is called his Secretary, and is seldom seen.
He is of a mutable and changing nature, participating
of the signe he is in, he is hot, cold, moist, or dry, and
of the Planets with whom he is configured, properly
he is the Authoꝝ of winds being in atery signes, and
he be in fiery signes and either h^e or J aspect him, he
causeth sudden mutations to winds, tempests, haile,
thunder and lightning, he is thus marked & as if he had
wings on his head, &c.

Mercurius tectur breuibz leuis æthere gyris,
Inconstans, varius, nec statione manens.

Of the Moone.

Luna (so called) quia aliena luce luceat, shee goeth be
course in 27 daies, 7 houres, and 44 minutes, or moꝝ
properly every moneth, shee is cold and moist of na-
ture, and in respect of her light to the Sun, her aspect
to the Planets, the signe shee is in, the Starres shee
corporally with, her latitude and the house of the
heavens shee is in, shee diuersly altereth the ayre. For
shee is the earths Planet, next to it, and powꝛeth on
the lively influence of all the heavenly bodie, shee (as
shee commonly appeareth) hath this note D.

Quod maculas vultus alieno lumine fuco,
muto cuncta, marem nunc peto, nunc fugio.

Quod vaga, quod nunquam constans, vis discernere causas
Fœmina sum, Vxoris forsân imago tuæ.

Of the 12 signes of Heaven.

Of Aries.

Aries is the secondary house of J very hot and
masculine, choleric, governeth the head, face, eyes,
eares, and their sicknesses, as the Apoplexies, Falling
Sickness, Mounds in the face, Toothach, Spots, Me-
ghewes, Ringwormes, Baldnesse, &c. And when
is in Aries it is good to yurge, thus noted V.

Leo the chiefe and onely house of the ☉ fiery hot and
dry masculine chollerick, governeth the heart, stomach
back, Ades; hath of sickness Cardiac passion, trembling
of the heart, Sounding, Deaf silent seasons, Jaundies,
thus noted N.

Of Virgo.

Virgo (the principall and night house of ♀) is earthly
cold and dry, melancholick, feminine, ruleth the bel=
ly, guts and midriffe, of sickness Iliac passion, the Col=
ick. Oppilations of the spleene, good to purge by vomi=
ngs, and to stoppe rheumes, thus noted η.

Of Libra.

Libra (the day house and chiefe of ♀) is aery hot and
moist masculine sanguine, ruleth the loines, raines,
vulva and bladder, hath of sickness, Dimnesse of sight,
weeping of vrine, the Stone and Collick. It is good
to

A Prognostication.

To diminish choller and melancholly, to take glister, and is thus marked.

Of Scorpio.

Scorpio is the night house of ♀ watery could e moist, feminine, Segmatick, ruleth the pury parts, the fundamēt and bladder, hath of sicknesse filth by Scabs, Spots in the face, Fistulaes, Emrodes, Cankers, and the French pox. It is good to ble potions, and to purge by electuaries. Thus noted, m

Of Sagitarie.

Sagitarie the chiefe and day house of ♀, fiery hot and dry, chollerick masculine, governeth the thighs and haunches. Signifies hot feauers, bleednesse in the eyes, falls from high places. It is good to diminish segme, thus noted 2.

Of Capricorne.

Capricorne is the chiefe house of ♀ earthily could and dry, melancholick, feminine, governeth the knees, lepie, surdity, fluxes of blood by the inferiour parts. It is good to vomit, to stop rheumes, &c. Good to sow and plant, &c. Thus noted y.

Of Aquarius.

Aquarius the day house of ♀ airtall hot and moist masculine, sanguine, governeth the leggs and their diseases, as swellings, incisions of the vains, feauer-quaintaines, Black jaundise, and Varices. It is good to purge melancholly, to plant, build, &c. Thus noted =

Of Pices.

Pisce is the night house of ♀ watery could and moist segmatick feminine, ruleth the ancles, heeles and fingers. Signifieth the gowts, pailse, and coynes. It is good to diminish choller, &c. And it is thus marked X.

**Astrological Prouerbs, or the nature, and note of
euery day good and bad this yeere.**

God hath made all things for himselfe, and the wicked for the will
by, Prouerbs 16.4.

To euery thing there is a season, and a time to euery purpose vnder
the Heaue, Ecclel. Cap. 3, ver. 1, 2, 3.

Good dayes.	Ianuary.	Euill dayes.
More willing then powerful	1 2 An ill beginning.	
Not very free hearted.	5 To what purpose.	
A good countenance.	7 8 More hast, worse speede.	
Hard to obtaine.	9 There goes a whore.	
13 Quick dispatch.	10 More iust then loue.	
17 18 Better and better.	14 15 Both knaues.	
Kind consent.	19 A vn traydor dos aleuofas.	
Sollicite thy lawyer.	20 Fire and water.	
15 A hopefull enterprise.	22 A priuate parle.	
27 It bodes good luck.	28 29 Crosse carding.	
	30 Guarda medios dems.	
	31 In a browne study.	

Good dayes.	February.	Euill daies.
The motion is liked.	5 6 7 Might against right.	
Vulnerarius non uictus.	11 12 13 Ride not so deepe.	
Perfekt friendship.	18 19 Scilla & Charibdis.	
10 Better would doe well.	20 It will not be found.	
With labour it may.	25 26 Take heed of drowning.	
16 17 Mutual concord.	27 Froward and fretfull.	
Speake and spare not.	28 Mischiefe intended.	
23 24 Loue with labour.		

A Prognostication.

Good daies.

March.

Evill daies.

- 1 It will be better.
- 2 3 4 Some princely fauour.
- 9 10 Willing but for want.
- 11 12 13 Highly promoted.
- 14 15 16 Thy Lord affects thee.
- 19 Better is toward.
- 21 As thou wouldst haue it.
- 23 All that may be.
- 26 27 Sticke to it close.
- 29 All for thy good.
- 31 It cottens well.

- 5 Little streames little mills.
- 6 Trust him not.
- 7 8 Thwart and angry.
- 11 Musing of milchiese.
- 14 15 Look to your locks.
- 18 Coughs and obstructions.
- 20 Take heed of a lath.
- 22 Thou wilt repent.
- 25 A dead reckoning.
- 28 Harne watch harne catch.
- 30 *Sol ne occidas super iram te-
fram.*

Good daies.

April.

Evill daies.

- 8 Slip not thy occasion.
- 9 10 No great deniall.
- 11 Victory in the end.
- 15 16 17 A happy chance.
- 21 Shee is thine owne.
- 23 24 Thine owne by law.
- 26 27 Better aduised.
- 30 Spare to speak spare to
speede.

- 1 As mute as a herring.
- 3 4 A hempen halter.
- 5 6 A brazen face.
- 7 8 An ould fornicator.
- 11 Much adoe, little sport.
- 13 14 An Eele by the tayle.
- 18 19 Beware a stabbe.
- 20 21 Toyle to no purpose.
- 25 Ancient enemies.
- 28 He will turne Turke.
- 29 Familiarity breeds con-
tempt.

Good daies.

May.

Evill daies.

- 1 A friend in a corner.
- 2 Kindly imbraced.
- 6 *Quere must amica.*
- 7 8 Haste to be had.
- 9 Wanne blood.

- 3 A rope and a halter.
- 4 In a deepe melancholly.
- 5 Earely vp & neuer the
- 10 False within.
- 11 Two to one.

Howker 1631

13 14 The world is mending.

 20 Still waters are deepest.
 21 Falshood in fellowship.
 22 An iniurious friend, a dan-
 gerous enemie.
 23 Ominous, if not fatall.

The vse of the Table in the second Columnne of the
 Almanacke, intituled, a true, perfect, easie, and per-
 petuall Table whereby to know the length of the day
 and night, Sun rising and setting, for every
 day in theyeere, for any place with-
 in this Kingdome of Great
 Brittain.

The Table is diuided into 14. severall Columns.
 The 4. Column on the left hand contains the
 Moneth and day of the Moneth, upon which day
 is noted the houre and minute of Sunne set, and the
 halfe length of the day, in that place under which it is
 (the 6. following Columns fitted to 6 severall places:
 as London, Leceister, Manchester, Durham, Edinburrow,
 St. Andrewes, and will serve to any Towne, or place in
 this Kingdome in the same paralell East and West)
 The foure Columnes on the right hand contains the
 moneth and day of the moneth, upon which dates is
 noted the houre of Sun rise, and the halfe length of
 the night. Know that an houre hath 60 minutes in it,
 45 minutes is three quarters, 30 minutes halfe an houre,
 and 15 is a quarter.

Example.

Example.

The 12. of Iune vnder the place Manchester and the Pole 53 I finde 8. 22. houres 22 minutes which is the time of Sun set, that being doubled is 16 houres, 44 minutes is the length of the night. That 8 houres and 22 minutes taken from 12, there resteth 3 houres 38 minutes the houre of Sun rising, which 3 houres 38 minutes doubled is 7. houres, 18 minutes the length of the night.

Againe.

The 12 of December (for the same place) I finde 9. houres 21 minutes the time of Sun rising, which doubled is the length of the night, being 16 houres 42 minutes. That 9 houres 21. taken from 12 leaueth 3. houres 38. minutes, the houre of Sunne set, which 3 houres 38. minutes doubled is the length of the day, being 7 houres 16 minutes, so for any day in the yeere.

An easie way to know the time of the Tyde,
or full Sea in all the Portes and Hauens
vnder named.

Obserne that the day of New Moone, and full Moone it is full Sea at London Bridge at 3. of the clocke, the day of the first and last quarter, at 8 a clocke 24. minutes. Now for any day after those quarters, or for so many daies after them you adde so many times 48 minutes, you shall haue the time of full Sea. As for example, the 8 of Iannary it is full Moone, and therefore full Sea at London Bridge at 3 a clocke. The next day I adde 48. minutes, which makes three houres 48 minutes, and so for the rest. Againe the 14 day it is last quarter. And therefore full Sea at 8 a clocke 24 minutes at London Bridge, for the next day I adde 48 minutes and it makes 9 houres 22 minutes. And so for any day.

A Prognostication.

New Moone,
Full Moone.

First Quarter.
Last Quarter.

		10 w. 2 d.	Mar. 7	Apr. 25	may 20	june 13	

The use of the two former tables.

In the first table, and the first column of space, you have the yeares of our Lord, beginning at 1601, &c.

In the next space, the Golden number for every yeare; as in 1601 the Golden number 6, &c.

In the third space, the day of the change of the moon in Februarie; as in 1601 the moon changeth in Februarie 22.

In the fourth space, howe Easter day falleth every yeare; as in 1601 Easter was April 12.

In the fifth space, the number of daies differing betwixt the Romane or Gregorian, and our account in England, for the keeping of Easter (and so by consequence all other movable feasts thereon depending;) as in 1601 there was no difference, but in 1602 the Romanes kept their Easter 7 dayes before us; and in 1603 they kept their Easter 5 dayes, (that is) five weekes before us.

And in the last two spaces you have the leap-yeare, and Sunday letter: as in 1601, 1629, & 1657, the Sunday letter D, and the first after leap-yeare, &c.

The use of the second table.

In this second table you have in the first place the Sunday letter, and in the next the Golden number whatsoever it be, from 1 to 19 inclusive.

The use whereof is, that for any yeare you (knowing the Golden number, and Sunday letter) may there finde the movable feasts.

Example.

By the first table this present yeare 1638 I finde the Golden number 5, the Dominicall letter G. Then in the second Table in the space answering to G, I look for the Golden number 5, which I finde in the first line of that space, and against it in the same line, from Christmas to Shrove-sunday, 1 week, 6 dayes. Shrove-sunday February 4, Easter-day March 25, Rogation April 29, Whit Sunday May 13, Advent Sunday Decemb. 2.

This table will not out of use be worn.

A true computation of memorable times.

From the Creation to Noahs Flood, <i>Gen. 5. c. & 7. 11.</i>	1657
From the Flood to <i>Abram</i> , <i>Gen. 12. 32. 12. 4. Aff. 7. 4.</i>	353

The use of this Table in Example.

King Henry 8, began his Reigne in the yeare of Christ 1509 April 22: He reigned 37 yeares, 10 moneths, and 1 day. And it is since he began his reigne, 129 yeares compleat the 22 of April, in this yeare 1638. Now to know the time since the end of his reigne, before his name standing on the right hand, you shall there finde 91 yeares since he died: January 28.

The foure quarters of this year 1638

{ European moneths }	{ Persian moneths }	{ Arabian moneths }	{ Ethiopian moneths }
{ March }	{ Pharuardin }	{ Ramachan }	{ Parmahatb }
{ April }	{ Adarpabast }	{ Shenuall }	{ Parmuda }
{ May }	{ Chardo }	{ Whilkade }	{ Paschnes }

The beginning of the Spring quarter, is accounted of the Astrologers as the time of the yeares birth: I will therefore begin with it, although something diverse to the common path. It begins with us the tenth day of March, 54 minutes past foure of the clock in the morning, the 12 deg. and 44 min. of Pices then ascending our horizon. The Sunne then entering the first point of Aries, makes the day and night equal to us, as to all the world. The temper of this quarter ordinarily and of course is hot and moist, of complexion sanguine, and is the yeares youthfull & growing age, lasting while the sunne runnes his course through Aries, Taurus, and Gemini. The state of the weather, as it depends upon the sunnes course to the fixed stars (which would be constant, were there no intervention of other causes) is first drie: the sun having passed the section of the Equator with the Ecliptique, draws neare to some hotter stars; and being nearer our zenith, both exhales and consumes the reliques of winters superfluity, helped by the Eastern windes, which then ordinarily blow. Whereby the earth is fit to receive the seeds that remain to be sown, and is also stimulated to generation: the trees thrusting forth buds, blossoms, leaves, and the earth drawing it in her entrails like vest, embellished and adorned with variety of

On the 29th of June, at 11 o'clock, the sun was in
Taurus, in the 12th degree, in his morning rising with the
Pleiades and Hyades toward the North; the Aecdi toward
the South: & soon after also Orion, waited upon also to bed
with Arcturus, which being tempered with, Roary, and most
constellations, stirre up, and bring those pleasing showers,
which being tempered by Southerly and Favonius winds,
are welcome to the tender and newly sowed plants. Lastly,
the sunne in Gemini approaching his height, stirs up a tem-
perate heat, convenient to the increasing of fruites & plants.

What the weather may be in regard of the aspects, I have
given a touch in the head of the blank page.

The Summer quarter.

June	Thir	Thillago	Frash
July	Mordad	Muharam	Febr
August	Sababeriz	Sefar	Mufri

The Summer quarter takes his beginning according
to the account of all countries, when the sun is distant
into the first point of the zodiacal signe Cancer, being with
us the 12 day of June at 3 of the clock in the morning the
14 degrees and 50 minutes of ny then ascending our horizon.
Now are the dayes the longest, and the nights the shortest,
to all that dwell on this side the Equator, the day being
with us at Cambridge (respecting the refraction) 16 hours,
13 minutes, & 6 seconds. The temper of this quarter is
naturally hot & dry, of complexion that is in the sun being
ascended to his height, hath like to be with him though
all the earths furniture to these several tropics.

These herbs begin to form their seeds, and the feeding
flowers are succeeded by their fruits, and therefore nature
now aims to further their increase to their full quantities.
Full, how the Aul in setting forth the sunne, they are
now more increased than with the former cold by the help
whereof having been greater, and now requesting heat
for their full maturation, the Aul enters the first beathing
of it, and is also accompanied with the morning-rising
of both the days, Spring and Prochus, whereby in winter
great heat is the hardening of grain, and ripening of all
other fruits, which yet is something tempered by the com-
mandancy of the Beethen Windes. By this time the sunne
being come into the terrestriall signe Vrgo, the heat is moder-
ated; and the aire though still dry, yet cooler, that the hus-
bandman may with more ease disrobe the fields, and furnish
his barns. Lastly, this long day now calling for moisture,
the clouds approaching to the westward, and lower-banking
clouds, by the morning, a shower of rain, which our Aul
rain is fit for the use of the dry and craving earth.

The Autumnall quarter.

September	Mabar	Rabie	Fath
October	Ahan	Rabie possim	Paag
November	Adan	Gumadi	Hatur

The autumnall quarter begins with the suns entrance
into the other equinoctiall signe Libra, which is the
13 of September, a little before midnight, 29 degrees and
9 minutes then ascending: making again equall day and

night to all the world: having spent on this side the Equator 186 dayes, 18 hour. 38 min. 11 sec. The qualities now predominant are cold and dry, like to the complexion melancholy, and declining state of man. Now husbandmen in their endlesse circle beginning to provide for the crop of the following yeare, have their land prepared by some few showers caused by the morning setting of the Pleiades, Hyades, and Orion: which moisture, lest it should hurt the new-sown grain and sprouting blade by the sudden approach of cold, the sunne while he passeth through 2 a signe of qualitie hot and fierie, doth as he can according to his distance from us) draw out the residue of it, and setteth the earth for the entertainment of the cold.

Winter quarter.

December	Di	Gumadbi 2.	Cebiac
Januarie	Behemen	Regab	Tuba
Februaris	Asphandar	Schaban	Amfchir

Winter quarter begins at the suns entrance into the tropicall signe Capricorn, which he doth the 12 of December about five of the clock in the morning; making then the shortest day & longest night to all on this side the Equator: the day with us at Cambridge then being 7 h. 21 min. 24 sec. The temper is now cold and moist, phlegmatick like to our decrepit state; in both which superfluous

humidities both abound. The earth seems now to be still and to be quiet, that it may recover the strength spent in the last summers probations: wanting a richer, it is oft robed with a vest of snow; which yet is observed not seldom to promise ensuing plenty, toward the end of this quarter. The sunne approaching in Pisces, accompanied with some warmer western winds, prepares the earth to entertain the ever-welcome Spring.

Under that spangled vault, the starry sphere,
If *Tiars* course should onely every yeare
The weathers temper change, then plainly we
The next yeares weather might in this foresee.
Compare two yeares, and there but little want,
But the same day same starres are culminant:
Their risings, settings, on the same day fall,
Acronique, Cosmique, and Heliacall.
This constancy would yeeld to no mutations,
Did not the planets oft consociations
Their power interpose: by whose aspects
I'th' heaven are caus'd those various chang'd effects.
Their various course is such, so strange their race,
The earth ne're saw them twice unchang'd in face.
This *Protean* mixture of the seven together,
Will cause a *Protean* daily change of weather.

Times prohibiting and allowing marriage.

Advent bids thee to contain:
Hilarie sets thee free again.
Septuagesima sayes thee may:
Eight dayes from Easter sayes you may.
Ascension pleads thy chastitie:
Yet thou maist wed at Trinitie.

December	2
January	13
January	21
April	2
May	3
May	20

To know the time of the Tides in a more exact and ready manner, then heretofore hath been set forth by any. The use followeth.

Daies after the Change or Full, the Moon is South at

10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30
11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31

Daies after either of the Quarters, the Moon is South at

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31
6	6	4	7	3	6	8	2	4	9	12	10	0	10	4	8	11	3	6	1	2	3	4	5	6	7	8	9	10	11	12

First finde the new moon, full, or quarter, in the kalender; then count how many dayes are past either of those: & under the same number of dayes past, you shall here see the time that the moon will be south the same day: then look for the haven or port you desire, and where the houres and quarters stand before the same, there it is high-water so many houres and quarters before the time above found: but where the houres & quarters stand after the place, there it is high-water so long after the time first found. *As for example*

The 30 day of January (that is, 3 compleat dayes past the first quarter) in this table above I finde her south, being the 5 day after the quarters, at 10 of the Clock, which maketh full sea at *Quinborough*; but at *Rye* it is tide 3 quarters before, at *Gravesend* an houre and an half after, and at *London* three houres after, &c.

0	Quinborough, Southampton, Portsmouth, Wellin,	6	Houres
3 quart.	Rye, Callice, Calshot, Winchelsea, Gorend.	9	3 quart.
1 3 quart.	Yarmouth, Bulloigne, Dover, Harwich, Wight.	1	9 quart.
2 1 quart.	Needles, Deep, Caker, Luz, Lenow, Orford, Laytis.	2	1 quart.
3 Houres	Orkney-pool, Orwell, S. Hellen, Flea, Bams, Eimden.	3	Houres

Of Eclipses this yeare 1638.

There will be this yeare three eclipses, three of the Sunne, and two of the Moon, of all which onely the last of the Moon will be visible in our Horizon.

The first of the Sunne will be the 4 day of January, and will be seen in India, Tartaria, China, and Persia.

The second eclipse is of the Moon, and will happen the 15 of June, it will be visible onely to the Western parts of the world.

The third, is of the Sunne, which will happen the 1 of July, and visible onely in the Southern parts.

The fourth which will be like unto the Sunne, will happen the 25 of November, & it will be visible onely about the Antarctic pole.

The fifth which will be of the Moon, will be the 10 of December, it will begin betwixt 6 & 7 of night, it will continue about 4 hours: this onely will be visible in our Horizon, & it will be a very terrible eclipse.

How to behold an eclipse of the sun without hurt to the eyes.

Take a burning-glasse, such as men use to light tobacco with in the sun; or a spectacle-glasse that is thick in the middle, such as is for the eldest sight; and hold this glasse in the sun as if you would burn through it a pastboard or white paper book, or such like; and draw the glasse from the board or book, & twice so far as you do to burn with it: so by drawing it nearer or further, as you shall see testimony may behold upon your board, paper, or book, the round body of the sun, and how the moon passeth between the glasse and the sunne during the whole time of the eclipse.

This mayest thou practise before the time of an eclipse, wherein thou shalt discern any cloud passing under the sunne; or by another putting or holding a bullet or his fingers mid betwixt the sunne and the glasse at such time (the sunne shining) as thou holdest the glasse, as before thou art taught.

To finde when the moon shall be eclipsed, and when not, by her distance from either of the two sections called the head and tail of the dragon, thus noted ☊☋.

IF the moon at the time of her true opposition to the sunne, shall be distant from either of these two points, lesse then 10 degrees, 21 minutes, and 30 seconds, then must the moon suffer an eclipse.

But if her distance (as before) be more then 13 degrees, 5 minutes, and 23 seconds, then the moon (at that full) cannot be eclipsed.

Therefore if her distance be more then 10 degr. 21 minutes, 20 seconds, and lesse then 13 degrees, 5 minutes, 23 seconds, then she may happen to be eclipsed, but not necessarily.

To finde when the sunne shall be eclipsed, and when not.

IF the apparent latitude of the moon at the time of the visible conjunction be lesse then 30 minutes, 40 seconds, there must be an eclipse.

But if the apparent latitude of the moon be more then 34 minutes, 51 seconds, there cannot be an eclipse.

Therefore if the apparent latitude be more then 30 minutes, 40 seconds, and lesse then 34 minutes, 51 seconds, there may be an eclipse.

**Astronomical Elections, &c. briefly described for
administration of Physick and Phlebotomy.**

A In all other parts of physick, so in phlebotomy, as let-
ting of blood, first skillfully and circumspectly is to be
considered and certainly known the cause: As whether it be
needfull and good to the patient, as that it be to purge the
body of some unnaturall, naughty, & superfluous humour.
For otherwise, letting of blood is very dangerous, & open-
eth the way to many grievous infirmities. And note gene-
rally, that it is not convenient, either for a lean & weak man,
or for a very fat and grosse man to be let blood, neither for a
childe under 14. yeares of age, nor an old man above 60.

Now there remaineth to be considered, how it standeth
with the patient inwardly, for his complexion and age, and
outwardly, for the time of the yeare, time of the day, & dist.

For the complexi- on; Let blood the	{	Phlegmatick Melancholick Cholerick Sanguine	{	The Moon being in	{	Aries or Sagittar. Libra or Aquar. Cancer or Pisces either of these.
--	---	--	---	-------------------------	---	---

For his ages; Let blood in his	{	Youth, from the change to the first quarter. Middle age, from the first quarter to the full. Elder age, from the full to the last quarter. Old age, from the last quarter to the change.
---	---	---

The time of the Yeare.

Spring good. Harvest indifferent.

For the time of the Moneth.

Let not blood	{	The moon in Taurus, Gem. Leo, Virg. or Capric. The day before nor after the change and full. Twelve houres before and after the quartiles. The moon with Jupiter or Mars evil aspected.
------------------	---	--

The time of the day.

Morning after sun-rising, fasting: after noon, after
perfect digestion: the aire temperate, the winde not south.

The proportion of the weight of metalls, compared in spheres of the same diameter.

TAke seven severall balls or bullets, all of one greatnesse, as being all cast in one mould, of the same metalls, and compared together, their severall weights shall be as followeth, supposing the first of gold to be just one pound Troy, &c.

¶ Here follow certain profitable Rules
and Tables, exactly calculated by Edw. Poul, Esq.
serving for all men that use any trade of
buying and selling, &c.

*A speciall note and generall rule, to be observed
in the use of these ensuing Tables.*

IN every of these five Tables, whensoever your question is
of a greater summe then is therein contained, do but lay
down with your pen or counters the summe found in the
Table, so often as will make up the summe propounded.

Example.

By the former example upon the use of the second Table, where one pound in 30 yeares is worth 10 pounds, one shilling, & foure pence farthing; thereby it plainly appeareth, that five pounds shall be worth five times so much, and ten pounds worth ten times so much as one pound is worth; six-ten pounds at 50 yeares end will be worth an 100 pounds, 13 shillings, six pence half-penny; or 9 in the hundred.

T

The use of these five tables following, by
Edward Pond, at the rate of 8 in the 100.

The first table shewes the yearely interest of any summe,
from one shilling and upwards, unto 10000 pound, etc.
either by pen or counters, onely by addition.

Example. For the use of 17 pounds and 17 shillings: by
this table I see that the yearely use of ten pounds, is 16
shillings; and of 7 pounds, is 11 shillings, 2 pence, 2 qu. and
of 17 shillings, is one shil. 4 pence: all these added together,
make one pound, 8 shillings, 6 pence halfpenny.

The second table sheweth what any summe put out for
any term under 31 yeares will be in the end, accounting in-
terest, and interest upon interest, &c.

Example. One pound put out for 30 yeares, is worth ten
pounds, 1 shil. 4 pence qu. to be paid at the end of 30 yeares.

The third table sheweth what any summe due to be paid
at any term of yeares under 31, is worth in ready money.

Example. One pound due to be paid at the end of 30 yeares,
is worth in ready money 1 shil. 11 pence, halfpenny, farthing.

The fourth table sheweth what any summe, being an an-
nuity or yearely rent to endure any term of yeares, will be
worth, all to be paid at the end.

Example. One pound annuities yearely due to be paid, dur-
ing the term of 30 yeares, and all forborn untill then, will
be then worth 113 pounds, 5 shillings, 6 pence, halfpenny.

The fifth table sheweth what any summe, being an an-
nuity or yearely rent, to endure any term of yeares, or a
lease for any term of yeares to come, under 31, is worth in
ready money, the cleare yearely rent being known.

Example. A lease of annuities of one pound yearely to be
paid during 30 yeares, is worth in ready money 11 pounds,
5 shillings, one penny, three farthings,

Tables calculated to 2 in the hundred. By E. P.

The Interest of any Summe from one Shilling upward due for a year, at 2 per Cent. per ann.

19. Shill.	19	0	5	10	0	8	15	0	xxij.	0	xxv.	1	xxxiij.	1	sh. 11
20. Shill.	20	0	5	12	0	8	9	0	xxij.	0	xxv.	1	xxxiij.	1	sh. 11

The proportion of the pound *Avoir-du-pois* to the pound Troy, is as 60 to 73; so that 60 pounds *Avoir-du-pois* are equal to 73 pounds Troy. The proportion of the ounce Troy to the ounce *Avoir-du-pois*, is as 73 to 80; so that 73 ounces Troy, are equal to 80 ounces *Avoir-du-pois*. Therefore the pound *Avoir-du-pois* is greater then the pound Troy: and the ounce Troy is greater then the ounce *Avoir-du-pois*.

Wheat at 5 shillings the Bushell or Strike, the town-bakers penny white, is (by Troy) 7 ounces, 7 penny weight: by *Avoir-du-pois* 8 ounces: And the Countrey-bakers penny white (by Troy) 7 ounces, 13 penny weight: by *Avoir-du-pois* 8 ounces and one quarter. If the baker want one ounce in 36 ounces of this assize, he shall suffer the Pillorie, without any fine or amercion, 51 Hen. 3.

The

POND 1638.

The weight of gold now currant, together with the allowance for light gold,

Shil. Pence | Pen.wei. | grain. | prim. | scr. | thir. | allowance.

Gold of	33	9	16	1	3	15	4 gr. & half
	30	8	18	23	10	18	4 & half.
	22	6	10	16	18	10	3 grains.
	20	5	20	15	5	20	3
	16 6	4	20	13	19	2	gr. & half
	11	3	5	8	9	5	2
	10	2	22	7	14	22	2
	6	1	14	16	4	14	1 grain.
	4	1	11	3	19	11	1
	4 4 3.9	1	19	8	10	1	
	2	0	19	6	2	7	half a grain
	3	6	0	17	15	21	half a grain

Silver of	5	19	8	10	8	1 lb. is 12 ounce
	2 6	9	16	5	4	1 ounce, 30 den.
	1	3	20	21	6	1 d. wei. 24 gra.
	0 6	1	22	10	15	1 gra. 24 prim.
	0 2	0	15	11	13	1 prim. 24 sec.
	0 1	0	7	17	18	1 sec. 24 thir.
	0 ob	0	3	20	21	

In Gold 40^{lib.} 18^{shil} 4^{pence} 3^{quar.} } doe make one pound
In Silver 3 } weight.

So that of English Coyne

In Gold,	one pound Troy weight	40 poun.	18 sh.	4 d.	3 q.
In Silver,	is worth	3	2		
In Gold,	one ounce Troy weight	3	8		
In Silver,	is worth	0	5	12	2

By this proportion it appeareth, that one shilling in Silver is equall in weight to 13 shill. and three pence in Gold, wanting one quarter of a grain.

FINIS.
